```

I have a Willem programmer that I've been using to burn chips for NES carts. Going to read these replies through and see what I can do. Thanks very much for the info, appreciate it.

Tony

It is close for an Atari burner but after our posts Tony posted that he is using a Willem programmer which changes things. I believe the Willem programmer is for an IBM so it expects a binary image of a ROM and wouldn't understand the load address header of Atari files. Segmented files<?> are way beyond it too. Even if you do a binary load and suppress the start/init to get rid of segmented files, you would still put that six byte header on when you did a binary save to clean it up.

So Tony, the files created with an Atari DOS/DUP or most of the existing carts converted to binary files will have those overhead bytes. Easy way to clean them up on the Atari is just read the first 6 bytes of a file and toss them, then read the rest of the bytes and save them. Another way of doing it would be to use your EPROM burner's monitor to start burning 6 bytes past the start of the file, i.e. something like give it address $005 to $1005 to the range of the file to burn. I'm not familiar with your particular burner so I don't know and am having a brain fart this morning.

Anyway, a reasonable thing to practice with would be doing a binary save of the built in BASIC, $A000, $BFFF and taking a look at that. The header will be
$FF
$FF

```
;tells DOS binary load file so the next bytes will be
$00
$A0
;Start address of load
$FF
$1F
;$1FFF or 8191 bytes? Or should it be $00 $20? Been too long.
;from here on is the actual cart image.
```

Another way to insure the overhead bytes won't get into your file would be to write it on an IBM with something like TASM. If you want the file to run on an Atari you can set up the header bytes doing something similar to what Russ did to place them there with the .byte directive.

Well, I'm really going to write the code on an 800xl and the port the
code to my pc, and then burn it to a chip using the willem
programmer.

I'll be porting the "assembled code" to my pc, (I'll be using Mac/65
assembler.)

Are there any examples of the autoboot header code on the web? I would
like to see how it looks in a real program.

Thanks again, I appreciate it.
Tony

Hi, Tony. I don't believe there is any 'autoboot header' for Atari carts.
The EPROM just has
the INIT and RUN locations that the OS looks
at on powerup. Disk programs have a header,
like Rick described, but that header isn't in
the Atari cart.
You have to burn to $BFFE/F and $BFFA/B
the pointers to INIT and RUN. Atari needs
no further info to function.
Writing the OBJ/COM file from Mac/65, you'd
have to simply get rid of the 6 byte header that
M65 produces, which would be easy. Can
do with a BASIC program to your .OBJ file.
eg.

```
10 CLOSE #1:CLOSE #2
20 OPEN #1,4,0,"D:FILE.OBJ"
22 OPEN #2,8,0,"D:OUTFILE.ROM"
30 TRAP 100
40 FOR N=1 TO 6
50 GET #1,X:REM DISCARD 6 BYTES
60 NEXT N
70 GET #1,X:REM GET REST OF FILE
80 PUT #2,X:REM WILL ERROR AT END OF FILE
90 GOTO 70
100 TRAP 40000:REM TURN OFF TRAP
110 CLOSE #1:CLOSE #2:END
```

I see. How would this above code look in assembly language?

I appreciate the help and info.

I can't translate it easily, that's why BASIC is
useful. But here's a small example of Assembler
that moves the screen memory and display list
down below $A000, so that you can load
a cart into $A000-$BFFF. Just a short
example of Atari assembler.

```
10 CIOV=$E456
20 IOCB=$350
30 RAMTOP=$6A
32  *=$600
40  LDA #$0C
50  STA IOCB+2
52  LDX #$10
60  JSR CIOV
70  LDA #$79
80  STA RAMTOP
0110  LDA #03
```

```
0120  STA IOCB+2
0130 L1
0140  LDA EDITOR
0150  LDA L1+1
0160  STA IOCB+4
0170  LDA L1+2
0180  STA IOCB+5
0190  LDA #$08
0200  STA IOCB+$0A
0210  LDX #$10
0220  JSR CIOV
0230  LDA #$0C
0240  STA IOCB+2
0250  LDX #$10

This really helps. One more thing, are you using the cartridge or file
version that was distributed on the free version of SparatDOS?

You see if you are using the cart, it will occupy the $A000-$BFFF
address space you want your code to run from. This leaves you the option
of assembling to disk which means you would have to use a program like
Russ gave to strip the header.

I don't have a set up Atari set up at the moment: I tried to get my SDX
cart back from phantom but he doesn't respond to my emails or posts to
the newsgroup. Going from memory I used the byte directive and mem sav.
I also wrote all my code to be compatible with the Atari ASM/ED which
meant I didn't take advantage of the Mac special features. SOOOO what
should work is:

```
10  *=$A000; Start of cart address space
20 START; 16 bit label equal to $A000 in this case
30  RTS; OK, It doesn't do much Your LDA #0 stuff goes here.
40 INIT; Ditto except will be one byte more because of the RTS
50  RTS; Still not doing anything!
60  *=$BFFA; Move program counter to CART START address
70  .WORD START; will put the START $A000 at $BFFA-B
80  *=$BFFE; Same thing for INIT
90  .WORD INIT
```

You also have to set the cart flag for if you want to allow things like
DOS to boot. If you are writing a word processor for example, you would
want that to happen so you could save and load files.

Now from there what you want to do is boot w/o a cart installed, lower
ram top to under $A000, use binary load to load the file. Now do a
binary save of address space $A000-$BFFF and strip the first six bytes
like Russ showed and it should be a pure binary ready to burn.

You see if the burner were on an Atari, those extra steps would not be
necessary since when you loaded the file it would be in a contiguous
memory block with the header not taking up space. I think MAC allows you
to assemble with an offset so you can have the actual code at say $4000,
but I never used that feature.

Thanks. I am using the cart version of MAC/65. I will read through
this info, try to absorb and re-post.
Thanks again,
Tony

  Anyone out there have an Atari 1200 XL that they either want to
"trash," "donate," or sell for "LESS THAN $20.00?"

  I'm seeking one for product development and future R&D for
interfacing for my 8-Bit Designs line of products and services.

  Any and all help is greatly appreciated.

  Thanks,

Charles>8-Bit Designs

Ok..someone told me to load my cas file by typing CLOAD and then hitting
enter twice, and then at the next ready prompt, type run.....sure enough, my
cas file starts to load, but then I suddenly get an ERROR 146 at line 1999
error ....

Any ideas why???

At the next ready prompt, if I try the Cload run sequence again, the system
will tell me that the file is still loading, but it hangs up about 3/4 of
the way.

Any ideas helpful

It could be the CAS file isn't a BASIC file, but
a binary load file.
If using Atari800winplus, do something like this,
or search HELP.
Usage

The emulator can only read, not write, the cassette images. Moreover, it

requires the SIO patch enabled to emulate the cassette player.

To insert a cassette image, use File/Attach tape (Alt+T) or Cassette Control dialog box. You can rewind tape by moving the slider, but usually a cassette image contains only one Atari file (real cassettes often contained many).

To boot the tape, hold Atari Start key (F4), while performing cold start (Shift+F5). Then press Space key. Or just use File/Autoboot image (Alt+B).

Note

The emulated cassette transmission is very fast, but before it starts, the Atari OS has ca. 9 second delay. You have to wait that time, or you can use Full speed (F7) if you like.

Forgive the top post, Shifty.
You can get a reconditioned, like new, 1200XL

from www.myatari.com for $125 plus S&H and tax.
Finding one for under $20 will be hard. It will
cost that much to ship it to you.
Then there's keeping an eye out on ebaY.

Following is from B&C computervisions. URL above.
****
        Reconditioned include power pack, TV cable
         TV switch box, manual & Basic.
HDA009   COMPUTER 400 16K recon   79.95
HDA034   COMPUTER 400 48K recon   99.95
HDA013   COMPUTER 600XL 16K recon   49.95
HDA012   COMPUTER 600XL 64K recon   59.95
HDA032   COMPUTER 1200XL 64K recon   125.00
HDA015   COMPUTER 800 48K W/BASIC recon 100.00
HDA017R COMPUTER 800XL 64K recon   95.00
HDA001   COMPUTER XEGM 64K LESS ACC.   49.95
         No: box, joystick, light gun or software. Like new.

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the home market rights to the Atari trademark itself, are owned by Atari Interactive, Inc., a subsidiary of Infogrames Entertainment SA.

NEWSGROUP BACKGROUND

comp.sys.atari.8bit was created in November 1986 (as part of the Great Renaming) as a direct replacement for: net.micro.atari8

comp.sys.atari.8bit is unmoderated, and has no formal newsgroup charter.

The comp.* hierarchy of Usenet newsgroups is managed by the Big-8 Management Board: http://www.big-8.org/

RELATED USENET NEWSGROUPS

alt.binaries.comp.atari8bit
Programs for Atari's 6502-based orphans.

comp.sys.atari.advocacy
Attacking and defending Atari computers.

comp.sys.atari.announce
Atari related hard/software announcements. (Moderated)
Moderator: Kevin Savetz
comp.sys.atari.announce web page: http://www.atariarchives.org/csaa/

comp.sys.atari.programmer
Programming on the Atari computer.

Woah, where!? I wrote a Pac-Man style game that I was
really proud of as a kid, and it stopped loading all of
a sudden. A decade or so later, I learned about this Rev. B BASIC bug,
which is likely what caused it. (I remember my Pac-Man game because
I was obviously very traumatized by the whole thing :^))

I probably (hopefully!) still have that floppy somewhere...

Subject: Introduction

Conventions

All commercial vendors, developers, publishers, and repair shops should be
listed here. "Active" PD/freeware/shareware developers should also be listed.
Persons or entities holding rights to products, but not selling or supporting
them in any way, should NOT be listed here.

"Vendor" = Reseller of products produced by others. Types of products
sold are given in categories: new hardware, used hardware, PD/freeware/

shareware, (new) commercial software, used (commercial) software.

"Developer" = Producer of products. Titles of products produced by the developer are listed. No prices are given.

"Publisher" = Publishes a print or disk magazine, or a book. Complete subscription or ordering information should be given, including prices. Authorized online publishers of originally print or disk magazines are also listed. Online books are not listed.

"Repair Shop" = Can repair 8-bit Atari or related hardware devices. Be sure to make advance contact before sending anything to work on!

Entries are presented alphabetically by company name, or publication title. If no company name exists, a personal name is used. "See" references indicate complete information may be found under the given heading. "See also" references indicate closely-related information may be found under the given heading.

The month/year that vendor information was most recently fully verified is given at the "upper-right" of each entry.

Every entry must contain a valid postal address or web page address.

Unless explicitly requested by the vendor, no entries will include an email address due to the overwhelming amount of spam that would result.

The following is from http://www.upu.int/irc/en/ (2004.03.27)

When one writes to a stranger and requests a reply, it is considered polite to enclose a self-addressed stamped envelope. This works well when both persons live in the same country. However, if they are from different countries, the enclosed postage stamp will not be valid.

This technical problem was solved in 1906 when the Universal Postal Union, during its Congress in Rome, introduced the International Reply Coupon service. International Reply Coupons (IRC) are exchangeable in all member countries for the minimum postage of a priority item or an unregistered airmail letter sent to a foreign country.

The UPU's International Bureau processes approximately six million coupons each year and takes care of all accounting aspects. Developed countries are the largest users. The International Bureau does not sell ICRs directly to customers; they must buy them from their local post office. Although they are not obliged to sell ICRs, it is mandatory for all Posts of the UPU member countries to exchange the coupons.

Verfications -> YOU!

This list is in a constant state of development, and comes with no guarantees. Information of this nature constantly ages; therefore, the information contained in this list is constantly updated. Please use the latest release of this list whenever possible!

Remember, the success of this list is dependent on YOU, the reader, to send me updates that correct errors that you find. If you use this list, please do your part in keeping it useful for everyone!

When this atari800 emulator boots up...its originally in a windowed screen. I have yet to figure oout how to get it back into windowed mode once it has been running in full screen mode. Alternatively, how do you access the menu commands when atari800 is in full screen mode???

Thanks

Recently, Michael took the time to help me greatly with respect to finding,
and actually loading this game in the emulator. I have been dying to find my
favorite game from 20 years ago! This game I have been trying to find for a
while!! Thanks Kindly Michael. Your assistance was greatly appreciated.

I sent you a copy at the e-mail here, if you pick up
those e-mails. If not, lemme know another e-mail.
I worked with it some this evening in Atari800winplus
3.1. I got a bunch of crashes and failed ENTERs.
You definitely have to edit out the garbage at the
end of the LISTed file that SALVAGEX.BAS
makes, or the ENTER won't work.
If mine doesn't work, then there's Jindroushes CHKBAS
that I haven't use for a while. Seems like CHKBAS
you have to do an ASCII to ATASCII transation.
CHKBAS is a PC utility to do the same thing
my SALVAGEX.BAS does on the Atari, of
course much, much faster.
I did finally do a successful test.

My Stelladapter is put away (Atari boxed up since we're moving soon),
but I was recently given an Atari 7800, and wondered if its two-button
controllers work with Stelladapter, the Atari-controller-to-PC-USB conveter?
How about with the Atari 8-bit computer?

And if it does, with either, what does the right fire-button appear as?

(I've used Sega Genesis controllers with my Atari 8-bit, and the B button
appears as a standard Atari joystick firebutton, and the C button could be
read by checking one of the paddle values. Is the 7800 the same?)

Thanks!

So... I have a wonderful Atari trakball, and I have a Stelladapter.
It just occured to me, I could probably read the joystick input in a program
on my computer (under Linux, Windows, etc.) and do the same pointer
calculations done on the Atari for mice and trackballs.

Does anyone see a problem with this idea? :)

Did anyone ever make any bowling games for the Atari 8-bit that utilizes
a trackball?

I saw an arcade cabinet at a Chuck E. Cheese's today that contained
three classic Atari arcade games (Centipede, Millipede and Missile Command),
as well as a modern Infogrames bowling game that LOOKED like it was from
the early 1980s (despite being (c) 2002), so apparently whatever hardware
was in the cabinet wasn't very sophisticated.

However, the bowling game was pretty fun, and I could see it being
implemented on the Atari computer (or, hell, even the 2600!).
Has it been done, and I just haven't seen it yet?

If not, maybe it's time for me to crack out the Action! cartridge and whip
something up. (I don't really grok bowling rules, nor do I care too much,
so I'd probably just release a 'bowling via trackball' engine, and let
someone else finish it up as a real game. ;))

While doing some research into the history of my home town of Arlington,
Texas, I ran across a little nugget of Atari history.

In 1982, Atari had some sort of a business operating at 2109 E. Division. I
never saw it or knew it had even been there until somewhat recently. Does
anyone have any idea what Atari did there? Was it a distribution center, a
computer store, a repair depot, a warehouse, or what? Today there is
nothing to indicate that Atari had once been there.

Just wondering if anybody can provide any details.

Thanks!!!

Matt J. McCullar

Ah! Perfect!!! Thanks ever so much! I work not far from that location, but until now have never had any reason to see what all is in that area now. I drive past it fairly often. General Motors has a big manufacturing plant very close to this area, and the new Dallas Cowboys stadium is being built close by, too.

In looking at Google Maps, it has a Street View of the building. It's part of a business park.

Not sure when Atari moved in or moved out. Wish I could have rooted through their dumpster back then!

Thanks again!

I think the Atari Service thing was shut down when Warner sold Atari.
I doubt Tramiel would have kept it going, but maybe he did for a short
time?

Hi there,

I'm not an 8-bit Atari user, but I recently got loads of Oric tapes -
and found some unknown-sounding tape signal among them.
See here:
http://mercenarysite.free.fr/oric/tap_inconnu.zip

Can anyone tell me if it's for an 8-bit Atari, would it be some turbo
loader or whatever?

Seems so far it's not standard
Oric/Amstrad/C64/Exelvision/TI99/ZX81/Sharp MZ.

Thanks in advance to anyone helping!
Simon.

Thanks a lot !
By chance, do you know which model?

I'll try and see what kind of decoders exist.

Cheers.

Sure, it is any of the 8-bit Ataris, 400, 800,
800XL, 600XL, 130XE, 65XE, 65XEGS,
1200XL, and rare 1400XL.
There is a wav to CAS program, never used it,
but I guess you hook up your analog tape player
to the input of a PC sound card and it will
make a CAS file that can be played on a
Atari 8-bit emulator like Atari800winplus.
The archive site langesite seems down.
Hmm. WAV2CAS is the program, lemme know
if you want me e-mail to you.

It could be any one, you'd never know from the sound of the tape, only
by trying to run it on different models. Some older programs would only
run on 400/800, and there weren't many people using cassettes after the
XL/XE models were introduced. The way the Atari tape system worked, I
don't think turbo loaders were possible, but I could be wrong.

Thanks a lot for the info.
I tried the conversion program, I'm not quite sure about the result but
it doesn't seem to display too many errors.
I'll have to check some day with an emulator!

Thanks again!

I think most commercial tapes would work on any
8-bit. Only a few required a translator disk, or
such, for disk software. It is sorta a rule that direct
calls into the OS was bad form, and resulted in
need for the translators, or in the case of tapes, just
wouldn't run.

A 100% free Archon remake is available at http://archon.curvenet.co.uk

Its for Windows only at the moment. I'd like to see a Mac release. I
think it's the evolution of the "Archon 2001" game that was
mentioned on here an age ago. Apparently, it uses the same game
timings as the original 8-bit versions, but with improved visuals and
audio. I'd forgotten how great a game Archon is. Whilst I'd love to
see Archon in 3D, this great remake will keep me happy for now...

The problem with the Atari tape was that while the encoding (data ->
sound) happened in the computer itself, the decoding did take place in
the tape recorder. Which means that any type of turbo loader must modify
the tape hardware. However, I'm aware of at least one modification for
the tape drive that implemented a turbo, but I forgot the name.

Greetings,
     Thomas

Greetings everyone!

Here is the lucky winner for May 2008 at The DarkForce! BBS:

June 2008
1. ST Magazine - Doc Clu wins the free 3 mag. subscription

Congratulations to our winner!

Also, here are July's prizes:

July 2008
1. ST Magazine - some lucky Atari caller will win a free 3 magazine
subscription.

2. A complete TOS 2.06 ROM set for your ST, courtesy of Techie_Alison
   (thanks Alison!)

Congratulations to our winner, and good luck to this months callers!

 :)

I tried Xarchon and it just didn't play well. It simply didn't feel
like Archon (and I'm not talking about the rather poor graphics).
Archon: Evolution's engine is apparently based on the original 8-bit
code (source: Wiki), which would explain why it matches the original
so closely.

I really don't like the Sorceress icon in Archon: Evolution though, so
I'm trying to create a new one for it. The developers welcome any
help, as the original artist is no longer on board.

> loader or whatever?

I'm not familiar with any Atari 8 bit turbo tape systems, but this file is definitely NOT the standard Atari tape format. But it does sound like a speeded up version nonetheless.

(Maybe a Photon Emitter will shed some light on this issue, Simon...) (((-;

Cheers,

Frank

How about Archon Ultra? I think it's the best PC version.

I had high hopes for "Ultra", but the battles are too slooooow.
Everything just feels sluggish when compared with the pace of the
original. I know the developers tried to create a bigger battlefield,
but the switching between resolutions was off putting.

The board looks very nice in Ultra, and I like the idea of the dual
attack though. I just miss the pace of the original. That's probably
why I prefer "Evolution" - It matches the pace of the original exactly.

I don't understand that RapidShare site where you have to download Archon
from.
So far, no download for me. Is that file anywhere else?

Before downloading the web site shows you a code then asks you to enter the
"letters that are attached to a cat".
What the F*** is that??? As far as I can see, all letters have a stupid cat
on them. Whatever I type in doesn't work.

I officially hate that site.

Only 4 of them have cats. Other have dogs. :) Type only the 4 letters with
the cats. They can be rotated, so look for the round head or tail parallel
with the body (cats). :]

I had to go and take a look just to see what you were talking about. The security system is even worse than I expected having read your description!

I stared and stared, and I can't tell which ones have cats attached to the letters either. (In fact I'm not even sure I can read the letters at all, regardless of whether they have cats attached) And all that was after I had to wait 3 minutes before it would even let me attempt to enter a code.

That does indeed appear to be the stupidest security system ever created.

Hello all,

I'm busy moving house at the moment and I'm clearing out some bits of unwanted Atari items on eBay. I have an 850, 800 (for spares - sticky keyboard problem), and a unique opportunity for you to own the master disk set used for our PD library. Most of these items are for the UK only. Here's the link (eBay UK):

http://search.ebay.co.uk/_W0QQsassZdeangarraghty

I may well add more items as I'm clearing out.

Dean Garraghty

Thanks for the reply. I'll go back to the site and see if I can tell the
difference!

I have visions of me doing a screen capture then pasting it into paint shop
pro to evaluate cats vs. dogs.

Yeah, I often have a hard time just picking up the letters on those type
security systems.

Thanks, Frank, I was beginning to have doubts about it myself.
Maybe some SuperTape or something for another computer...

> (Maybe a Photon Emitter will shed some light on this issue, Simon...) (((-;

Oh, maybe it is a Novaload tape ;-)

Simon

I have Atari 800XL system, main, CPU or "console" unit - whatever it was
called (I am not an expert on vintage computers/games). Owner claims it
WORKS FINE, but since Chess Game memory cartridge failed they never used it,
chess was the only thing they cared for. There's another cartridge from
Citibank and I dont know wha tit does, I am quite sure main unit works.
Video cable is included, even monitor is available but I doubt anyone wants
a small CRT whitish monitor these days, it's probbaly better to hook up to a
modern monitor thru some sort of connector adapter. I have connectorized
videocable for it.

Main unit looks like a keyboard integrated with CPU/mainboard, it's clean
and owner says it works. Any interest?

Do NOT reply on Newsgroup, email instead and REMOVE "NOJUNK" strings in my
address.

Best if transaction is conducted on Ebay 9for safety) - my Ebay feedback is
100% positive, not to mention a DECADE of Newsgroups trading without any
complains.

Well I eventually got the download.
It was luck, be sure. I went back to the site and it took 3 tries.
But, I never saw the difference between the dogs & cats. In fact, some of
them were so obscured you couldn't tell what animal it was.

I *think* the site probably does this to help convince the user to get a
paid account to avoid that security system.
I'd bet money on it.

Thanks though!

I assure you Sir, no 'bullying' is taking place. The conclusion Michael has drawn is supported by the available information, and yours is falsified. If you care to bring new information to the fore that supports a different position, you'll find that the majority here will be happy to listen. If instead you present indignant denial and a series of infantile personal attacks, you will no doubt receive nothing but contempt.

One of the things that makes this forum great (indeed, much of this thread is a testament to it) is that egotistical ad hominem sabre rattling is mostly lost in the noise. In its place you'll find respectful (if sometimes heated!) discussion which will derive what is correct not through authoritarianism, but through reason.

If you're content to operate within the aforementioned guidelines, I look forward to your contributions. If not, well, at least the rebuttals will be moderately entertaining.

Good day,

Matt

On Apr 21, 4:14 pm, Rick Cortese <ricor...@earthlink.net> wrote:

> On one of your points, yes, I am wrong a lot and I admit it. The problem
> here is: I am not wrong this time and a couple of people are being
> intellectually dishonest in trying to bully a 'win'.

I assure you Sir, no 'bullying' is taking place. The conclusion
Michael has drawn is supported by the available information, and yours
is falsified. If you care to bring new information to the fore that
supports a different position, you'll find that the majority here will
be happy to listen. If instead you present indignant denial and a
series of infantile personal attacks, you will no doubt receive
nothing but contempt.

One of the things that makes this forum great (indeed, much of this
thread is a testament to it) is that egotistical ad hominem sabre
rattling is mostly lost in the noise. In its place you'll find
respectful (if sometimes heated!) discussion which will derive what is
correct not through authoritarianism, but through reason.

If you're content to operate within the aforementioned guidelines, I
look forward to your contributions. If not, well, at least the
rebuttals will be moderately entertaining.

Good day,

Matt

Hi, I'm Ben Smith here in Portland, Oregon USA! Proprietor of Bravo Sierra
Computers! Occupying a unique niche in the Atari World! Most Atari Dealers
sell NEW, I also sell Used Atari Goods! Not only do I sell NEW Atari Goods
at a competitive price, I also sell used Atari Goods you wont find at Swap
Meets, Thrift Stores or Auction Sites! And I sell for less! Unlike those
remaining anonymous! I test Goods before I sell them. Not only can I sell
you some Great New stuff! I can also sell you hard to find 2nd Hand Goods,
because I'm the guy people goto to give Ataris a New Home! Saving Orphaned
Atari's from Oblivion!Goto http://BensCatalogs.Atari.org or (503)256-9974!

I've got a fast turnaround rate. Usually, Once I receive payment your
order goes out the same day. Customers love the speedy service! I have
lots of Atari SoftWare & Books. Which I can send by Media Mail Rate!

Please Direct all Replies Through E-Mail to: BenSells@Atari.org or
Atari@aracnet.com. If you can't reach me, see my info at the Bottom!

Atari 8 Bit and ST Games/Software, Hardware/Accessories and Books/References!
FREE Catalogs @ http://BenSells.Atari.org or http://BensCatalogs.Atari.org or
Catalogs Requested by E-Mail at Atari@aracnet.com or BenSells@Atari.org and
Please Specify Atari 8 Bit, ST or Both! Or Call Ben anytime at (503)256-9974!

That's the problem of trying to argue an issue based in 1980, using
laws from 2008 :)

But getting back to the earlier topic of Atari tech documentation,
it's well known that the architecture of the Atari 8-bits were *very*
closed the first year or 2. Nolan Bushnell speaks of how he was
opposed to this approach by Warner management, in the "Stella At 20"
documentary, and why the closed arch. was the reason why major
software titles like VisiCalc appeared on the Apple II first. Owen
Rubin has also publicly talked about the first time he got an Atari
800 (while working at Atari), and how he received no tech docs for it
(because they hadn't been written yet!). Until the book, De Re Atari,
there was very little info.

I think after the courts ruled in Activision's favor (regarding 3rd-party software for the VCS), they realized it was impossible to keep the software market all to themselves. Whether or not they realized that 3rd-party software only helped hardware sales, I don't know (but I doubt it since the 7800 and later systems used software encryption), but the correct approach had to be forced upon them. Nintendo actually succeeded in locking out 3-rd party software (except for "rogue" companies who circumvented the lockout chip, like.... Tengen/ Atari! Maybe they did finally understand it. lol).

Hi,

  >>....CBM serial bus which ran at what, 300bps?
  >
  > That's just plain silly. Even the stock IEC speed was much
  >faster than 300bps....

Yep, it is plain silly that CBM chose such a slow speed. But was THAT slow!

If you happen to check the following web page:
http://www.viceteam.org/plain/drive_info.txt You'll see that the 1541
transferred data at a hideously nippy 0.4KB per second....

  >....When equipped with JiffyDOS....

Totally irrelevant, the majority of users didn't use such upgrades and were
stuck with "stock" speeds.

Hi,

> Actually, Atari jealously guarded the secrets of the chipset
>in the 400/800 until it was obvious that the system would only
>survive with 3rd party software support....

The technical reference manuals were available pretty early on, in the UK at least (though we got the machines a couple of years after the US). On top of that they even went to the trouble of creating the "Atari Program Exchange" (APX) to encourage the creation and distribution of user generated software.

Plainly the actions of a company "jealously guarding" it's secrets.

The technical details of their consoles (VCS/7800/Jaguar) were always kept secret, but the micros were "open books".

Some of us actually lived through those years....

>....Even the Atari Assembler cartridge comes with horrible
>documentation that doesn't even scratch the surface of what
>you need to create usable software.

First piece of software I bought for my Atari....

The documentation assumes you have the technical reference manuals, and as such is more than sufficient for its intended audience. I certainly had no trouble with it!

TTFN - Pete.

Yes. As Ensor says it's hideous. It's more like a tape recorder
without the need to spool to the sections to load from.

Without a fast loader you can literally *see* the bytes being
transfered.
With a fastloader the thing is quite usable.

bye
Marcus

I always liked the fact that the intro pointed out how well they'd been proof read
and any crashes were your own fault but then two listings actualy had 'ERROR - '
at
the start of some lines. Unbelievable.

Of course, that's an actual big step up. Having to find the start of a
program on a cassette was as much a problem as the slow loading. I used
ten minute cassettes, and kept one important program on each (maybe a

backup later on the tape), but I gather most people used 30 minute or
longer tapes and multiple programs per cassette, making the search issue
worse.

So having direct access to files with a disk drive actually is a big
improvement. Slow transfer only counts once you've had something
better. Which is the same thing with cassettes; I don't recall them
being much of a problem other than finding the start of the program,
but the minute I got a floppy drive in 1984 I never wanted to use
cassettes again for programs.

There was one early commercial floppy drive system, and it was
treated as a faster cassette system. They didn't bother with
a real operating system, which made it easier to adapt the system
to multiple computer types, so you saved at a specific location on
the floppy, and when loading had to specify where it started (and
maybe ended, I can't remember). At the time, at least thirty years
ago, it was still better than cassettes.

    Michael

The way I read it, 65527 is all you need to look at.

In the 400/800, possible values and meanings are:
   221 = OS Rev. A NTSC
   214 = OS Rev. A PAL
   243 = OS Rev. B NTSC
    34 = OS Rev. B PAL

In XL/XE systems, the value returned is the actual OS Revision number.
(that is, 10, 11, 1, 2, 3, or 4)

-Michael

For non-sequential data access inside files a tape isn't too
useful, either.

> Slow transfer only counts once you've had something better.

Of course - but the thing was nearly as expensive a a C64 in
some countries. And for that kind of money I would *at least*
expect the speed of the Atari 8-bit computer's floppy drive
which gets the job done, too, but isn't exactly a speed demon.

> Which is the same thing with cassettes; I don't recall them

Totally understandable and most people interested in a "real"
computer used floppies sooner or later.
What I really find funny though, is that there are several "turbo
tape" solutions for the C64 out there that give the user higher
speeds than a (standard) floppy drive ;-)

Sounds like those old drum memories.

bye

Any date?

> (though we got the machines a couple of years after the US).

Same with Germany. I saw the 400 and 800 models in shops
around 1981 - but I'm not sure that this is the earliest date
they were available. I got my 400 in March or April 1983 and
getting to know the machine took quite some time as I didn't
have the funds to buy many books back then. Especially not
from overseas as having a "personal computer" was still a
new thing in Germany at that time and German books were
just beginning to arrive on the shelves.
The C64 really accelerated things here and a plethora of
books were made available - surprisingly having a good effect
on books for other computers, too!

> On top of that they even went to the trouble of creating the
> "Atari Program Exchange" (APX) to encourage the creation
> and distribution of user generated software.

When did they establish APX? The earliest game I found
(the well known Eastern Front 1941) is from 1981 - same
date as De Re Atari, which was mostly written by the same
author (Chris Crawford) and contains some "free advertising"
for the game ;-)

> The technical details of their consoles (VCS/7800/Jaguar)
> were always kept secret, but the micros were "open books".

The discussion was about *when* the books got opened,
not *if* the books got opened.

bye
Marcus

The Atari stock floppy went about 19200 baud, was
capable to 50K baud with some drives and DOSes.
I never had much luck with the faster situations, got
errors, standard speed was pretty reliable.

What was the Apple][rate?

Under ProDOS, after factoring out the drive startup
and file open time (about 0.8 sec), the file transfer
rate in my experiments was about 7.7KBytes/second for
reads.

I haven't done similar experiments for DOS 3.3, but
I would expect it to be a little less than half that.

For a couple of years, and lots of software development, I used C60
cassettes, and a recorder with a tape counter. I always reset the
counter at the beginning of a tape, and faithfully logged the start
of each program saved on a paper "directory".

This made it quite natural to save "generations" of a program under
development so that the latest version was always at the end of the
used tape.

I never had any of the problems that others describe in using cassette
storage, which I attribute to finding a good volume setting and always
using the same cassette deck.

I modified the deck so that I could always faintly hear what was being
played back or recorded through the speaker, providing good cues for
activity and making it easy to confirm the tape positioning.

This was all using an Apple][+ computer, so the tape starts and stops
were manual,

Hi,

What did Oliver do to improve the Apple II libraries?

Ri

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

The Atari computer intellectual property rights are currently owned by Atari Interactive, which is managed by today's Atari, Inc. Both of these are divisions of Infogrames Entertainment.

You can try bataribasic @ bataribasic.com and see if that "kit/system"
helps. I personally found it easier to use then 6502 Assembly.

What is the most common russian standard font on our little 8-Bit-machine?

I want to translate my GUI to russian, and I don't want to create my own
standard for that, if our russian 8-Bit-friends have already one.

Is there a standard-font available?

gtx.

Mirko

http://www.langesite.com/Atari/Holmes/Holmes%202/Media/Fonts/

You can find 'CYRIL.FNT' in Holmes archive.

I believe it is the one published in Antic, 1988

This is a computer custom font, not a printer font.

Our Polish friends may have a better one.

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

The Atari computer intellectual property rights are currently owned by Atari Interactive, which is managed by today's Atari, Inc. Both of these are divisions of Infogrames Entertainment.

NEWSGROUP BACKGROUND

comp.sys.atari.8bit was created in November 1986 (as part of the Great Renaming) as a direct replacement for: net.micro.atari8

comp.sys.atari.8bit is unmoderated, and has no formal newsgroup charter.

The comp.* hierarchy of Usenet newsgroups is managed by the Big-8 Management Board: http://www.big-8.org/

RELATED USENET NEWSGROUPS

alt.binaries.comp.atari8bit
Programs for Atari's 6502-based orphans.

comp.sys.atari.advocacy
Attacking and defending Atari computers.

comp.sys.atari.announce
Atari related hard/software announcements. (Moderated)
Moderator: Kevin Savetz
comp.sys.atari.announce web page: http://www.atariarchives.org/csaa/

comp.sys.atari.programmer
Programming on the Atari computer.

AtariAge.com has a news article here:

  http://www.atariage.com/index.html#55370

linking to some reviews over at AtariProtos.com for some Atari 8-bit titles:

  * Frogger II (looks gorgeous)
  * Tutankham
  * Up 'n Down
  * Star Trux
  * Saucer
  * Pac-Mac
  * Football
  * Letter Tutor (a lightpen-based handwriting tutor!)

FamilyNet International Newsgate

Well, was making the rounds tonight and I caught up on 200 messages her on the newsgroup. First off, good to see this place still plugging along. On another note, man... so many messages comparing the Atari to the Apple 2. Wow... who cares!?

Go with your bliss, I think that is what was told me early on in getting into the retro computing stuff.

For me the bliss is the Atari 800. I gave away all my ST stuff tonight, just decided after a while of fun tinkering with that ... if I had to mess with a retro machine, mught as well go as far back as I can and still have grpahics and sound. :D

So who here has tried out the Prison Board BBS? A lot of people are saying how they enjoy getting on with a real Atari 300/1200 baud modem. I am so happy to hear that. The sysop has worked hard to make that BBS retro friendly and to keep the Atari BBS list up to date. And again he added a nice feature... when you log in, you can jump from start to menu by typing on the login line: "*(first name) (Last name) (password)"

And when you are in 300 baud, every little bit helps. Later all!!

Doc Clu

Who could afford the long distance charges at 300 baud?
-Jess

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

The Atari computer intellectual property rights are currently owned by Atari Interactive, which is managed by today's Atari, Inc. Both of these are divisions of Infogrames Entertainment.

http://faqs.cs.uu.nl/na-dir/atari-8-bit/welcome.html

NEWSGROUP BACKGROUND

comp.sys.atari.8bit was created in November 1986 (as part of the Great Renaming) as a direct replacement for: net.micro.atari8

comp.sys.atari.8bit is unmoderated, and has no formal newsgroup charter.

The comp.* hierarchy of Usenet newsgroups is managed by the Big-8 Management Board: http://www.big-8.org/

RELATED USENET NEWSGROUPS

alt.binaries.comp.atari8bit
Programs for Atari's 6502-based orphans.

comp.sys.atari.advocacy
Attacking and defending Atari computers.

comp.sys.atari.announce
Atari related hard/software announcements. (Moderated)
Moderator: Kevin Savetz
comp.sys.atari.announce web page: http://www.atariarchives.org/csaa/

comp.sys.atari.programmer
Programming on the Atari computer.

FamilyNet International Newsgate

True. But some have said they wanted to get on a BBS with their Atari modems,
so here's your chance. Otherwise, just telnet to rdfig.net and that will get
you there for free. :)

Greetings everyone!

Here is the lucky and proud winner of the May 2008 prize
at The DarkForce! BBS:

May 2008
1. ST Magazine - Twilitezoner wins the free 3 mag. subscription

Congratulations to our winner!

Also, here is June's prize:

June 2008
1. ST Magazine - some lucky Atari caller will win a free 3 magazine
subscription.

Congratulations to our winner, and good luck to this months callers!

:)

Subject: RetroChallenge 2008

Retrocomputing enthusiasts the World over are cordially invited to
participate
in the 2008 RetroChallenge, commencing July 1, 2008.

RetroChallenge is an opportunity for fans of "obsolete" platforms to
spend a
month pushing their retrocomputing limits in the company of like-
minded geeks.
Participants set their own goal(s) and typically keep the community
apprised of
progress via weblogs or on the Retro BBS.

Challenges are as unique as the individual RetroChallenger -- in the
past
participants have programmed games; created music and video content;
performed

dangerous hardware hacks or simply spent a month trying to get an old
computer
to boot.

RetroChallenge is not so much about competing, as it is about sharing.
Think of
it as an on-line show-and-tell for RetroGeeks. Because the individual
challenges
are self-posed, the RetroChallenge is equally well-suited to hoary old
wizards
and tender newbies alike. It's not about winning, but about *doing*.

RetroChallenge is open to *all* retrocomputing platforms. For the sake
of
simplicity (and to avoid the usual endless debate), the criteria for
what
constitutes a "retro system" is anything older than 10 years, though
obviously the older the better.

For more details see retrochallenge.net

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

The Atari computer intellectual property rights are currently owned by Atari Interactive, which is managed by today's Atari, Inc. Both of these are divisions of Infogrames Entertainment.

NEWSGROUP BACKGROUND

comp.sys.atari.8bit was created in November 1986 (as part of the Great Renaming) as a direct replacement for: net.micro.atari8

comp.sys.atari.8bit is unmoderated, and has no formal newsgroup charter.

The comp.* hierarchy of Usenet newsgroups is managed by the Big-8 Management Board: http://www.big-8.org/

RELATED USENET NEWSGROUPS

alt.binaries.comp.atari8bit
Programs for Atari's 6502-based orphans.

comp.sys.atari.advocacy
Attacking and defending Atari computers.

comp.sys.atari.announce

Atari related hard/software announcements. (Moderated)
Moderator: Kevin Savetz
comp.sys.atari.announce web page: http://www.atariarchives.org/csaa/

comp.sys.atari.programmer
Programming on the Atari computer.

The 815 was aimed at the business market.. Obviously it needed more storage capacity than the home user(or so Atari thought).

I can't imagine it being double density only as most commercial software was still distributed on single density protected disks. Unless you had a single densisty drive as 1 to boot from. And then you run into the problem that most commercial software was stuck at 2 drives.

Hi folks,

a new release of atari++, the Atari 8-bit emulator is available for
download at its usual location, namely:

http://www.math.tu-berlin.de/~thor/atari++/

New in this release:

- Fixed the handling of the initial keystroke.
- Added a curses (text-based) front-end.
- GTIA artifacts now support various GTIA models.
- GTIA supports now user-defined color maps.
- The GUI can now be used entirely by the keyboard or the
  joystick, use the cursor keys to move the pointer from
  gadget to gadget and press RETURN to click on an object.
- Added a RelMouseStick input device that reacts on the
  relative mouse movements rather than its abstract position.
- Fixed the POKEY audio muting, it is now able to detect
  situations in which a lower mixing frequency is audible
  even though the channel itself is not.
- Fixed initial timing/speed setting, could have caused
  audio-drop outs or slow play-back.

Note that the terminal output ("CURSES") is only available on *ix
operating systems, not for win. For details how to use it, please
consider the manual (included in the archive).

Thanks,
     Thomas

FamilyNet International Newsgate

A long time & stable Dallas BBS, The Prison Board, has offered to provide a "Favorites page" for the Atari BBS users. Other users (like Tcropper) and I provided an up to date BBS list of the active Atari sites out there, and Rueben (PB Sysop) created a place you can go to, bring up an Atari telnet menu, and go directly to that Atari BBS. icon_smile.gif (Recently a Commodore BBS list has been added too.)

Ever been curious to see the online world of Atari computers? Come check out the Prison Board BBS:

972-329-0781 (this number good for people want to try out Atari modems, and dialup means.)
216.62.20.217 (This IP number is great for Lantronix users, and has not changed for a considerable time.) [IP Still accurate April 13, 2008] (also telnet://rdfig.net)

Trying to dial in with a stock Atari 300/1200 baud modem? You poor soul! But this has been less painful with a new feature. When you log in and the BBS asks for your log in name type "*[First name] [last name] [password]" and you'll skip over the log in screens and get taken directly to the main menu.

Never has the online Atari world been so easy to access from your Atari computer. Simply call up the above system, get to the main menu, X for the internet menu, and then A for the Atari menu. From there, it is simply a matter of hitting 1 through 9 for the Atari BBS's. Atari BBS's in many cases run on real Atari computers like the one you're calling with. Both chats are there, and one BBS is listed that you will not see anywhere else.

And the Prison board makes a great E-mail service too. icon_smile.gif You

can E-mail the outside world with a real E-mail account, and if you wanted to surf the web on your Atari computer (especially 8-bits) there are telnetable locations with Lynx browsers you can hit from the Prison Board's telnet out feature.

Let me know here if you have any questions, and many thanks to The Prison Board BBS for this awesome service.

Naturally a BBS sysop loves more users, but seldom have I seen a sysop that have bent over backward for his users that he would be a pretzel at this point. Changes that Rueben has added as of April 13, 2008 for the retro computer community, and all I had to do was ask nicely and give feedback that you've given on how to make it better:

1) Added the Atari BBS list
2) Opened up 300 baud support. (this is turned off on modern BBS's) 3) Paid for the licences to add more lines. I think he started with 3-5 lines. Traffic increased when we started this, and so more lines were needed.
4) Added the Commodore BBS list
5) Added links to the Atari chats on both atarinews and the IRC chat.
6) Added the ability to skip all log-in screens. (this added with 300 baud users in mind).

In 1980, Apple II graphics/sound looks limited.. Graphics on the games look very terrible... Sound is not good. Atari graphics/sound are better than Apple II.. Why did many companies make the games for Apple more than Atari?

I attended to the computer class in the elementary school. There were many Apple computers in the most school. Can anyone tell me a reason why the school chooses Apple even thought the graphics and music were terrible?

Thanks!
Jack

I suspect it has a lot to do with the larger size of the Apple II
market. And the broader range of hardware and software available
for the Apple II, which put it into a lot more applications.

Education is not about pretty graphics and sound. Educational software
is about *good authoring* and *entertaining* graphics and sound, which
has almost no relation to their objective quality.

Marketing. In Australia and New Zealand Apple struck deals with the
respective boards of education. It still occurs that way, Acer in
Australia for example. Its got very little to do with reliability,
performance or software. I'd imagine its the same overseas.

To partly answer your question, here is an *awesome* interview that
covers the origins of MECC, who was instrumental in establishing the
Apple II as the K-12 standard:

http://www.cbi.umn.edu/oh/pdf.phtml?id=177

The interview is done within the larger context of the evolution of
educational computing, and the related financial, technical, and
bureaucratic challenges. Fascinating and informative reading.

In education as in other application areas, a standard platform
is a wonderful thing.

You should have seen the graphics and heard the sound on a TRS-80! This
was the route my Jr. High and High School went with. Just not the same
experience. I was learning Apple Pascal while everyone else was
learning how to scroll their names all over the screen and typing in
crappy maze games from magazines in BASIC.

Although they were contemporaries, the Atari 800 was over two years
newer. Two years as a lot of time to add hardware features. Even so,
the Atari didn't have slots or the software base the Apple II had. I
think the Ataris were seen as more glorified game machines (especially
the 400) and the Apples were seen as more *serious* computers. The
expandable hardware, deep software library, and adequate graphics/sound
gave the Apple II a leg up on the other platforms of the time.

Dave...

Atari wanted control over everything, which bit them in the ass. At
first they wanted to make cart games of all their coin-op games and
use the coin-ops as free advertising. The problem was that they
rushed so many games to market that they didn't take advantage of the
capabilities of the system. There's an archive of all the email on
the Atari VAX that sheds volumes of light into the inner workings of
Atari and it's no friggen' wonder they failed so gloriously until
Tramiel took over, who happened to turn a profit for a while, but it
was too little too late.

Could it be a problem of development kits: was it so easy to program on an Atari than on an Apple II ? Were the tools so efficient?
I may be wrong, but the Kyan Pascal was both available on Apple and Atari: did those tools appear too late?

Guillaume.

And according to the interview, luck as much as anything else
determined that standard. If one accepts that MECC was a catalyst for
the proliferation of micros in schools, then a big reason for the
Apple II entrenching itself was that Apple was the only manufacturer
to take MECC's bidding process seriously:

"MECC dispatched two people out to talk to Steve Jobs and Steve
Wozniak who were the 21-year-old kids with the new Apple computer.
They had already announced their intent to save the world and they
were going to help education using the computer. They had no
information about what we were doing in Minnesota. They didn't know
anybody was using computers in schools. We told them about MECC and
said we'd like to buy five Apple II's at a special price. They gave
us a special price ... Yes, we got a bid from Apple. We also got bids
from other companies. Some of the companies, particularly Radio
Shack, were not enamored with this process and thought it was kind of
hokey - the process being the bid process and the state requirements -
and so they weren't real particular about how they responded. We told
Radio Shack, 'You know, if you don't respond in the right way we can't
accept your bid,' and they weren't willing to change. Everything was
flying high and they were selling TRS-80s like mad. The Atari people
and the Commodore people were late and there were very stringent rules
- if you aren't in by noon on the appointed day, you are [out]."

(One of a few flashpoints in that interview; the whole thing is
captivating, especially to someone who wasn't alive to witness the
transition from centralized service-based computing to local
autonomous computing.)

1980, wow! That was a long time ago.

In 1980, I remember the Apple II/II+ as having the best graphics/sound
at that time, and it had a disk drive! Wow, no more loading from
tape.

The TRS-80's built-in screen was screen black and white. It had
graphics and sound? If it did, Radio Shack certainly didn't market
it, but I do give them big credit for actually selling computers in
their stores.

The Commodore pet was text with crude line/block characters in it's
font, but it came out roughly the same time as the Apple II. The
VIC-20 would show up a LATER, and the C-64 even LATER.

The IBM-PC came LATER and did not have graphics built-in but it did
have slots like the Apple II which meant that graphics cards could be
added.

Other than in coin-op video arcade games and a game consoles, I don't
really remember Atari computers in 1980, maybe LATER in 1981/1982 they
started showing up in stores, but Apple had the market by then. The
graphics and sound looked good in the demos and in the pre-packaged
Atari arcade games. But, could you type:
]HGR : HCOLOR = 5 : HPLOT 0,0 TO 279,159
on an Atari and get a jagged orange line on the screen?
On the Atari, I think you had to write 6502 assembler which had to run
within a limited amount of time to do hi-res graphics, am I wrong
about this?

In the 1980's, I wrote educational software for the Apple II and Icon computer.

Why schools go with the hardware they choose? I think that it's a government decision and the process changes. I don't know.

Where I lived at the time, the schools in the province of Ontario, Canada primarily had Commodore equipment. And, later the government latched onto putting Icon computers in schools, built by Burroughs / Cemcorp, later Unisys, later maybe Sperry at the end. In the 90's, I think they switched to Macintosh and PC. But, by that time the legacy Apple II still had the of the most educational and games software going for it. And, my friends and their children to this day still play Oregon Trail on their modern computers!

No, but you could type

```
graphics 7
color 1
plot 0,0
drawto 79,79
```

to get an orange line on the screen. (-:

I afraid so. The c64 had no graphic support in its rather limited basic.
The ataris did, however, string variable support was an annoyance.

It has rarely to do with the hardware capabilities of the systems. The
decision makers rarely had a clue about the hardware in first place, and
other factors are just more important (pricing, discount for education,
long term support,...).

Greetings,
     Thomas

A former colleague used to be a technical sales rep for Apple back in
the 1980's in Florida. They ONLY targeted the school market. He said
that their biggest selling tool was strip clubs.

Most machines that were designed with a "cartridge slot" were designed
on the "video game principle", and the manufacturers assumed that the
machines would be programmed by *them* not the users, and that software
would be an annuity for them.

Good riddance to them.

Now all we have to do is get rid of their spawn... ;-)

Apple, in contrast, published *everything* needed to make software,
plug-in cards, and even more computers! That was the right vision,
in the sense that it could "start a fire" and seed the computer
revolution. (Note that it was Woz' vision, not Jobs', who rushed
to nail eveything shut as soon as he had the chance.)

Salesmen seem to degenerate to the lowest common denominator unless
provided with strict adult supervision--which was never a strong suit
in the early Apple Corp. ;-)

Put another way, since the only metric generally applied to salesmen
is the quantity of sales, if left unchecked they tend to stoop to
anything to get a sale. "Bribery? What's your problem?"

I'd bet that, for Woz, it was as much a default way of thinking (from
the hobbyist ethos) as it was vision. I get the sense that if someone
had approached him at the time and asked why he was releasing so much
information about a flagship product, he'd have blinked and responded
along the lines of: "Well, yeah... why wouldn't I?"

Exactly--I didn't say it was calculated. I think it was his
image of himself as providing a foundation for the contribution
of others.

This was, BTW, the engineering ethos of HP, as well.

Funny this thread started, because I'm just now, 25-30 years later,
figuring something out about the Apple II. I was a die-hard Atarian
throughout the 80s, and I figured that was a completely logical choice
because, well.. let's face it, Performance-wise, the Atari beats the
Apple hands-down. In stock form, anyway. But there's the rub.. with
all the expansion slots and room for cards in that cavernous shell and
with all the technical data that every Apple II shipped with, it
practically begs to be modified and expanded. I just got my hands on
"The Apple II Resource Directory", summer 1981 edition. Good god,
there was a lot of expansion cards available, way back in '81! This
appeals to me. Whatever the limitations are of the base hardware,
can be overcome with a clever expansion card.

Now, as much as I love the Atari, you just can't do that with them.
Sure, the 800 has slots, but they're tiny and most of them are spoken-
for with RAM and ROM. And they're damned hard to connect with the
outside world. Yeah, the 800XL had an expansion slot, but I guess by
that point people weren't interested in making expansion cards.

you know what I want to know? How does the apple interface to a
floppy drive with so little hardware?

In short:

Atari drives as you surely know are intelligent - with a 6502-
variant, ROM, RAM and interfaces.
Apple drives are "dumb" - most of the "digital stuff" happens
inside the Apple on a small but very, very clever interface card.

Read the respective chapter in the seminal Apple hardware
explanation book "Understanding the Apple II" which you can
do here: http://victa.jamtronix.com/display/page/4313
If you don't recognize the wizardry of Woz here, then you'll
never will ;-)

Some other bits:

The Apple drives peak at around 11KB/sec and - because of
their design - very flexible to program for. A multitude of DOSses
exist but there are really only two standards: DOS 3.3 and ProDOS.

I don't know if the Apple drives & controller were cheaper but
they surely were cheaper to produce and made good profits.

The Atari drives for all their complexity were flawed from the
beginning: Shitty interface with 2KB/sec which was planned for
tape recorders and modems only, low capacity compared to
nearly all competitors, the need for a DOS in the Atari's RAM
in spite of the ROM in the drive (the Commodore 1541 saved
much memory - other flaws aside).

The only real technical advantage I see for the Atari drives is
that they can be used to stream data into RAM and the
application runs mostly undisturbed (display list interrupts
have problems, IIRC) while the Apple has to "stop" the game,
loads and then continues.

bye
Marcus

I was thinking it might be neat to make a card with co-processor
(6502) that kept prodos in it's own RAM... the MLI could be patched
to JMP to the RAM on the interface card, and there'd be a bunch
more space for programs for Contiki...

Also would be cool to have a spot for plugging in the IPdragon
unit from the Uther card... then TCP/IP could be put on the
card as well, and free up even more RAM...

The CPU on the card could run at high speed, and increase
data transfer rates for disk and ethernet access...

Rich

I remember someplace that Wozniak's floppy drive
interface/controller was a major reason Apple][
could be made/sold for the price. ie. Floppy controllers
were very expensive and Woz made one from
cheap parts.
I read the article, sorta, up to page 43 or so.
I don't know the speed of a Apple][floppy,
I do know the basic speed was 10 times faster
than a Commodore 1541. Seems I remember
that the Atari can go about 52K baud, which is
about 5K bytes/sec. The bus speed of an Atari
is 115K cps I think, so that is a limit on its
I/O. The Atari PBI with hard drive interface
goes at about that 115K bit/sec rate, I think.
I'm a hardware wannabe, but not.
Rick Cortese is a hardware man, and maybe
Rick Detlefsen (A8Maestro).
For instance, does Apple][have a serial,
parallel or USB interface disk drive emulator
for the PC? or Mac? Atari has a very useful
interface that allows using a PC for a hard or
floppy drive.

There are a few, I think.

http://apple2.boldt.ca/?page=3Dterserialdrive

There was also another fellow who was trying to write
a ProDOS driver to access a HD in a PC through the
serial port, I have not been able to contact him, but
you can find his message on csa2.programmer

Jack,

A small history lesson for you. Apple II graphics and sound, over the
years hardly changed. From when the Apple II was introduced in the
late 1970's until the advent of the Apple IIe, the "high resolution
graphics" on the Apple II never changed. The only improvement before
the introduction of the Apple IIGS in 1986 was the use of "double high
resolution" graphics.

As far as the number of games available on the Atari vs the Apple II,
I doubt any of us can ever get an exact count. The Apple II did have
a head start and technically the 8 bit Apple II's were manufactured
much longer than their Atari counterparts. However, in the early to
mid 80's, I'm pretty sure that any major game that appeared on the

Apple II was also on the Atari. The 8 bit Atari's soon gave way to the Atari 520ST/1040ST and that may have slowed the development of games for the older Atari's in it's later years. You could say that about the 8 Bit Apple II's as well when the IIGS came out.

As far as education went, I remember using the Apple IIe in 1983 or 1984 at school. I was probably in 3rd or 4th grade at the time. I didn't think about the graphics or sound. I was just fascinated with the computer and the programs I could run. Why Apple choose to focus on education, we'll never know (maybe to get an early influence on the kids to buy Apples in the future).

However, it was a sound business decision. The Apple IIe was still in use at my high school through my graduation year (1992) and presumably a few more years after that. That's a solid investment for school's who may have to change machines way more often these days with the way technology changes. Despite the decline of the Apple II in the commercial market in the 90's, the Apple II was still entrenched heavily in education and that came it going longer than the Atari's and Commodore's.

Don

Right--and virtually every system sold had a floppy
controller and at least one floppy drive.

Not only was the controller very simple, inexpensive
hardware, but the drive was a "gutted" Shugart SA390,
with the complex Shugart logic board replaced by the
very simple Apple analog board.

Making the Apple II completely responsible for control
of the drive reduced the cost of the disk subsystem
substantially--*while significantly improving performance*!

This was a principle that Woz seemed to understand
almost intuitively--and his experience with "algorithmic
state machines" in HP calculators certainly helped.

> goes at about that 115K bit/sec rate, I think.

Any "smart" drive will wind up reading the disk data
into an internal buffer and then transferring the data
to the host computer when requested. This double move
performed by a single processor guarantees that a smart
drive cannot move data at the rate the disk can support.

Most other computer manufacturers seemed to put disk I/O
in the "slow" category, and so did not devote much effort
to speeding up transfers. In the case of the C=64 and
the Ataris, the transfer speed on the link to the computer

was a small fraction of the speed supported by the drives.

Apple drives communicate directly with the disk controller
which communicates directly with the Apple's processor bus.
Data transfers are controlled by software, but it runs at the
speed of the disk, and the bus connection is not a limiter.

The raw speed of a single-density 5.25" drive is 250kBits/sec.
The "standard" single-density encoding required at least 16
bit times per byte of data, so they could support about 15KB/sec.

Commodore and Apple both used Group Code Recording, which uses
fewer "overhead" bits per byte.

Apple 16-sector formats encode 3 bytes of data in 32 bits,
increasing density and speed by a factor of 1.5 compared to
single-density encoding. This is all done in software running
on the Apple II--another piece of Woz' cleverness.

Practical disk speeds will, of course, be affected by many other
factors, including seek and rotational latency and the computer's
ability to sustain data transfers over multiple sectors.

In Apple's DOS 3.3, data was doubly buffered on its way to
memory, cutting transfer speed and requiring sector interleaving
to achieve respectable speeds (still the fastest in the PC world
at the time). With the introduction of ProDOS, the double-buffering
was eliminated and the interleave factor was cut substantially,
providing significantly faster floppy I/O.

> floppy drive.

Such devices are a "natural" for Commodore and Atari systems,
since they function normally as a drive connected to the computer
by a data link.

They are much more challenging for the Apple II, since the drive
is interactively controlled by the Apple II in real time--and
many copy-protection schemes used this control in novel ways to
achieve their ends. So the only really "compatible" interface
to a Disk][is a real-time faithful emulation of an Apple II
running the actual code that accesses the disk.

Of course, if you are willing to settle for read-only access only
to normally formatted disks, then there are several hardware (and
even one software) solutions for doing so. Read/write access is

more difficult, and access to copy-protected disks is not available,
in general.

Commodore were actually pretty nice drives from a hardware POV.
Essentially the same type of built in 6502<7> smart box but with built
in power supply instead of wall wart/pig in snake type. They had fast
loaders too like we had Warp and USD.
> that the Atari can go about 52K baud, which is
> about 5K bytes/sec. The bus speed of an Atari

> I/O.

Right, derived by dividing the system clock down from the 3.57954 mHz
crystal. Goes something like system clock 1.78977 mHz but with a divide
by 16 prescaler to 111.86 kBAUD. We have a POKEY register that can
divide that down further to get our other frequencies. I seem to recall
it is a 16 bit register so we can go pretty slow and accurate the slower
you go. Certainly the 1 mHz 6507 we have in our drives would be pushing
it to do the timing right at 112 kBAUD!

IMO you are ultimately slaved to just what a 6502 can do. Even a RAM
disk is limited to ~25k/sec.

Rick

Hi,

> I still don't understand why 815 has dual drive in one unit....

Probably because someone at Atari thought i twas a good idea? :-)

I'd have loved to have one, less cables, less clutter, less boxes attached
to my Atari. Great idea, except for the cost (and the poor reliability).

>....815 should have ONE drive, one drive is good enough....

That's a matter of opinion. I always found two floppy drives ESSENTIAL when
I was using my Atari....

> Atari 815 MFM was poor reliable drive....

This as I understood it was why it was dropped so quickly, though I'm sure
other people may know better.

>....Why not 815 use GCR instead of MFM?....

Probably because GCR was a pain to implement, and, in my experience, very
unreliable. All of the standard FDCs available at the time implemented
either FM, MFM or both. There were, to the best of my knowledge, no FDCs
which implemented GCR, which meant far more work for the designers.

>....Commdore and Apple Disk Drive have GCR encoding. They have not
>much problem....

Are you joking? The GCR CBM drives were by far the most unreliable drives
I've *EVER* used! Good riddance to them!

> GCR drives formats the 256 bytes per sector.

So can MFM, in fact 512, 1024 and 2048 byte MFM sectors are not uncommon.
It's a function of the FDC, not the encoding method....

  TTFN - Pete.

Hi,

  > Apple, in contrast, published *everything* needed to make
  >software, plug-in cards, and even more computers!

So, you're saying that the Atari Technical manuals I have not 6 feet away

from me are figments of my imagination? :-)

True they weren't shipped with the machine, but had to be bought seperately, but they contain full schematics, operating system listings etc....

By the time of the XL/XE series machines Atari had stopped publishing such manuals, but then again so had Apple etc.

TTFN - Pete.

Hi,

  >....Shitty interface with 2KB/sec which was planned for
  >tape recorders and modems only, low capacity compared to
  >nearly all competitors....

And in practice it was quite usable.

Don't forget, it was some 64 times faster than the CBM serial bus which ran
at what, 300bps?

  >....the need for a DOS in the Atari's RAM....

Which to my mind (and those of the designers of the vast majority of
computers) is a great ADVANTAGE.

The speed is the problem of the serial interface. Of course, one can do
it even worse than that, see the 1541. As far as the DOS is concerned, I
never really got that. At least in the XL series enough ROM space was
available, but they used it for supporting future hardware that never
saw the light of the day. (Side remark: The atari++ emulator ROM has its
DOS exactly there, one could burn this and use it.) Of course, a ROM
based DOS would have set the DOS structures in stone.

Problem is with sound. It uses two sound channels for communications,
and the other two are only available if you bypass the Os.

So long,
     Thomas

The best way to get a picture of the computer gaming market is by
examining very early issues of Computer Gaming World, which are here:

http://cgw.vintagegaming.org/galleries/index.php?year=0&pub=0&id=500

They contain a wealth of data, including game rankings and other
statistics that specifically show what computers their subscribers are
using. For example:

http://www.easyscreens.info/?v=3286

They show that the Apple II utterly dominated computer gaming from
1981 to 1982, ceding some exclusivity in the next couple of years but
still staying the preferred platform. Later issues show that
Commodore ramped up too quickly to let Atari have a shot at
frontrunner status. There was some Apple/Atari overlap, but much of
it was not simultaneous - Apple would be the first release, with Atari
arriving later. Of course, this changed before too long.

As Chris Crawford wrote in the April 1984 issue: "Three years ago,
life was simple: you designed for the Apple, period."

The best way to get a picture of the computer gaming market is by
examining very early issues of Computer Gaming World, which are here:

http://cgw.vintagegaming.org/galleries/index.php?year=3D0&pub=3D0&id=3D500

They contain a wealth of data, including game rankings and other statistics that specifically show what computers their subscribers are using. For example:

http://shackpics.com/files/13_5gxxj2bdh6e20mwtzs1q.png

They show that the Apple II utterly dominated computer gaming from 1981 to 1982, ceding some exclusivity in the next couple of years but still staying the preferred platform. Later issues show that Commodore ramped up too quickly to let Atari have a shot at frontrunner status. There was some Apple/Atari overlap, but much of it was not simultaneous - Apple would be the first release, with Atari arriving later. Of course, this changed before too long.

As Chris Crawford wrote in the April 1984 issue: "Three years ago, life was simple: you designed for the Apple, period."

Can you guys send me the copy of CSS XF Single Drive binary rom? I asked someone, he can burn the rom for me but we dont have the CSS rom for XF551...

Thanks!
Jack

That's just plain silly. Even the stock IEC speed was much faster
than 300bps. When equipped with JiffyDOS the 1541 is capable of
speeds equivalent to the Apple II using ProDOS. With a good protocol
such as JiffyDOS, the IEC bus was not the bottleneck, the drive was.
The 1541 also used a 2mhz 6502 which was very well suited for pulling
data from the drive as fast as the drive could read it, once the IEC
protocol problems were solved it was an extremely fast and effective
drive.

Since the Commodore has been thrown into this discussion by others, I
guess it's fair to point out that Commodore gave you the best of both
worlds: a complete DOS in ROM that is shadowed in RAM (if wanted) as
well as the ability to completely replace the DOS in both the computer
and peripherals if wanted (such as for JiffyDOS).

Actually, Atari jealously guarded the secrets of the chipset in the
400/800 until it was obvious that the system would only survive with
3rd party software support. By then it was too late. Even the Atari
Assembler cartridge comes with horrible documentation that doesn't
even scratch the surface of what you need to create usable software.

IIRC, Apple Oasis has support for this. I seem to recall a disk server
and using floppy images/drives to/from the PC. Been a while though.

Cheers,
Mike T.

(about the Commodore 1541 and JiffyDOS).
I only briefly ventured into Commodore 128D.
I had a 1541, and it was very slow, cassette
speed it seemed.
I take it JiffyDOS fixed that. What is JiffyDOS?
A cart, or a plug in item? Atari had/has
speedup DOSes and disk formatting, but I
never liked them as I got errors with my drives
with the speed ups.
If we're talking plug in adapters, the Atari had
hard drive interfaces that worked on a parallel
bus at 115Kbaud.

The 1541 is many, many times faster than cassette even without any
speed ups. Yes, it's slow, but not that slow. JiffyDOS is a ROM
solution that replaces the KERNEL ROM in both the computer and the
drive. It still uses the IEC bus, but it uses two lines
simultaneously for data, thus doubling the theoretical bandwidth of
the IEC bus. Unlike the DOSs for Atari, the stock CMD Kernel calls
are all intact except for the cassette routines, which honestly aren't
used by anyone using JiffyDOS. JiffyDOS provides complete support for
the standard CBM DOS commands, so programs that use the normal KERNEL
calls and the CBM DOS commands are 100% compatible with JiffyDOS.

They *never* stopped making all info available on the Apple II line.

It was automatically included with the Apple II and II+.

Around the time of the //e (1984+), as the typical user profile shifted
toward "application users" instead of "programmer/enthusiasts", the
provided documentation became more "user manual"-oriented--but full
technical documentation was still available separately.

So for the Apple II, the details and examples were there from the

beginning (the Red Book and the WozPak, for example)--just when
they needed to be there.

I've often said that the Apple II was the last personal computer
for which all the documentation needed to completely understand
its hardware and software weighed less than the machine. ;-)
(The Apple //e shipped into the 1990s.)

When were these manuals published? I ask, because I always
read that De Re Atari was the first publicly available programming
documentation around 1981/2. That would be a cool two years
after the machines were launched - and De Re Atari isn't even a
hardware manual.

Apple started to reduce the level of detail by the time the IIgs was
released (1986). There are no official ROM listings for any part of the
IIgs firmware, nor for the IIc+, but they did publish schematics and
most other technical details.

The second edition of the IIc Technical Reference doesn't contain any
ROM listings (even for the original IIc), but the first edition did have
ROM listsing for the "UniDisk" IIc firmware, and I think I've seen a
supplement which lists at least one other revision.

(None of Apple's published firmware listings include Applesoft BASIC,
since that code is copyrighted by Microsoft.)

I'm not sure what their policy was with the Apple /// and Lisa, but I'm
not aware of any publically available ROM listings or schematics of any
Mac (no point - it wouldn't fit with the general philosophy).

The IIgs certainly wouldn't qualify on that measure. I needed a
moderately large shelf to hold my nearly complete set of IIgs technical
documentation.

Right company, right action, wrong product. It was the 2600 that Atari
kept secret. John Harris cleared this up a while back along with several
other errors that were perpetuated/started by the book Hackers.

I can't recall the exact time line but I think it was within ~6 weeks of
getting his hands on a 800 when the technical reference became available
to him. It was probably fairly late considering the birth of the Atari
computer was sorta 1979, sometime around 1980 or 1981 I think. There
were a few problems with the tech ref, I think it listed OS rev A vs. B
and I'm not sure if it is the CTIA or the later GTIA chip. De Re Atari
was copyright 1981.

BUT all this does make sense to me on at least one level: Atari
patented the custom chips. What happens in the patent process is if you
or someone else releases the information in the patent before it is
granted, the application is denied. The ANTIC creators, Jay Miner Et Al,
were granted the patent in 1981.

Rick

Actually, the limitation is that the patent application must be *filed*
prior to public disclosure.

Good point--the absence of proprietary ICs was a big plus.

I think the mid-1980s marks the turning of the "open" tide at Apple,
for numerous reasons related both to market changes and management
changes.

> (None of Apple's published firmware listings include Applesoft BASIC,
> since that code is copyrighted by Microsoft.)

Of course, Applesoft was one of the first things that the community
reverse-engineered and documented, so the fact that Apple was bound
by licensing agreements did not seriously hamper its exploitation.

> I'm not sure what their policy was with the Apple /// and Lisa, but I'm
> not aware of any publically available ROM listings or schematics of any
> Mac (no point - it wouldn't fit with the general philosophy).

Both were extremely "closed" in comparison the the Apple II.

The Apple /// was apparently kept closed in the mistaken hope that
it would encorage only "legitimate" developers of "business" apps,
as opposed to the free-for-all in the Apple II world.

So much for that idea...

As it turns out, volume is volume. ;-)

Mines of Titan/Mars Saga was available for Apple II and PC/ C64. It should
be available for Atari, Atari graphics look great and colorful! but actually
not available for Atari. Any reason?

Thanks! Jack

AFAIK the US is unique: you can file a US patent application up to one
year AFTER the "public disclosure". And also selling the patented object
starts the clock even without any publications.

-Alex who is NOT a lawyer.

I have two friends that are patent lawyers, well one died on me
recently, and they have both told me otherwise. More along the lines of
the patent *is* the disclosure that you are getting exclusive rights
because of. Once any public disclosure is made, the patent office well
see no need to give you any rights to reveal how you did something.

It was/is a bit of a problem because of the "Publish or Perish" and
trying to drum up business by telling other companies about the latest
greatest you just came up with. We could cover some problems with non
disclosure agreements but we still couldn't let info out into a public
forum.

Rick

FamilyNet International Newsgate

(5200/800/XL/XE emu for Dreamcast)

Hello Doc Clu,

I've just released version 0.77 of Atari800DC

You can find it at
ftp://ftp.groessler.org/pub/chris/dreamca...77/atari800dc-0
.77-bin.tar.gz

The changes from 0.76 are

* enable basic R: device emulation with the DC Coder's Cable (no
modem controls; fixed to 8n1; baud rates 300 - 9600)
* use Atari800 2.0.3 code base
* use KOS svn code base version 560
* add possibility to switch X and Y axes of controller input
* ability to disable either the D-Pad or the Joystick of the
controllers (in "Controller Configuration" menu)
* ability to disable or enable Bienias' sound improvements. They
are too heavy for the DC and therefore disabled by default. 0.75
had them disabled, 0.76 had them enabled, now it's selectable.
* when saving or restoring state display a "please wait" since
accessing the VMU is very slow. This was already in 0.75 but got
lost in 0.76.

Please spread the news and thanks for your help.

regards,
Christian Groessler

FamilyNet International Newsgate

Excellent! This is always fun, an incentive for getting on your Atari computer
setup and doing as much on it primarily as possible. :D

An Atari 800 won the Retrochellenge 2005.

A lot of fun, and the Retrochallenge usually has a BBS for all the contestants
to hang out on, so it is really like stepping back to the 80's and 90's as you
talk to other people who are there on Apple 2 computers, early Macs, Atari,
Commodore computers.. just awesome.

Hope some of you will consider participating!

Doc Clu

Hi guys..I'm glad I found this newsgroup. I am eagerly trying to get my
hands on a PC version of this outstanding Atari 400
game I played Years ago. My dad and I were addicted. It was produced in 1981
by Inhome Software which was a company based in Toronto Canada, I believe.
It was called Crypts of Terror and was designed for the Atari 400 system.

If anyone can tell me about any torrents, image file downloads, or if you
converted this game to PC your self, I would love to hear any suggestions on
how I can run this game on my XP computer. That would be awesome.

I am not sure if this game may have been developed into a PC game under
another name, but I don't think so

Thanks kindly for any information you guys might be able to give me.

Hi Michael. You seem to be extremely knowledgeable about Atari 8 bit sytems.
I am trying to find out some information about a game called Crypts of
Terror which was released for the Atari 400 in 1981 by a company called
INHOME software, which was based in Toronto Canada I believe. This same
compnay released other titles like Captain Beeble...

I am trying to figure out if anyone ever converted this Crypts Of Terror
into a version that could run on the PC platform.

DO you know anything about this game.? Any information would be greatly
appreciated. With Any luck, you are the guy who wrote it ;)

The Koala Painter later became "Atari Artist" and I think you should
find this. The program has just a different look (and, IIRC, one
additional functionality for symmetry).

So long,
     Thomas

Probably an easy question for long-time Atari 8-bit users.. I have a diskette
that came with a recently acquired 800XL that contains a financial analysis
program.

- When I boot it on my 800 (48k of memory installed), it comes up to the DOS
  menu. I can list the diskette and see the application files, but using 'K'
  to run them results in Error 139.

- When booted on an 800XL fitted with an Ultraspeed Plus ROM upgrade, it does
  the same thing.

- When booted on a stock 800XL, lo and behold, it comes directly up into the
  application.

The question is: Why this inconsistent behavior?

Thanks for any answers!

Not much help but I remember a few accounting type programs that used a
binary loader for their software written in BASIC.

The binary would do things like trap reset/break and prevent you from
listing their BASIC code. The BASIC was also protected, substituting
returns for variables or something like that.

So you may want to try booting the 800 with a BASIC cart and if the XL
has reverse use of option key on boot, boot it with BASIC.

Rick

Hi All

Can everyone get to www.atariage.com just now? Just wanted to confirm
that it's a problem with my DNS and not the site itself.

Thanks
paul

Thanks Rick. I thought it was a problem with my DNS cache but I've
cleared the cache and restarted everything and I still can't get there.
I can however get to some pretty random URLs that I know are
deffinately not cached here so I guess there's a problem with their
provider :(

Update:

Just found this (link taken from the AtariMania forums here
http://www.atarimania.com/atarimania_board/viewtopic.php?t=1658) Looks
like there's some big downtime at the AA providers datacentre:

I think probably just need BASIC at boot. So
BASIC cart with the 800, hold Option with
the ultra ROM XL.
Using 'K' at the DOS menu (DOS 2?) is a
binary SAVE. You don't want that, it could
be that you could 'L' binary load some file on
the disk, but probably it is a commercial disk that
boots up automatically with BASIC enabled.

<sigh> Now all I need to do is _find_ an 800 BASIC cart. The guy who sold me the computer has a basement full of such things, but I cannot convince him to look for them :-(.

Might be worth buying one of Steve Tucker's flash memory carts and loading what I need that way.

You seem to have access to an 800, XL with
a super ROM, and a stock 800XL. I guess
you need the disk to work on your 800.
It shouldn't be hard to find a BASIC cart, but
why don't you use one of the XLs?
Also, if you mention the name of the financial
program, it might be it is available as a binary load
or regular BASIC version.
If a regular BASIC, then you can use a binary
load BASIC and then just run it on the 800.
A binary load BASIC won't work if it is a
BASIC boot program, I guess. It might work
to see what files are on the disk. You might be
able to autorun BASIC and then autorun the
application at the same boot time.

I don't _need_ to, but I'm trying to learn about these units and wanted to.

> It shouldn't be hard to find a BASIC cart, but
> why don't you use one of the XLs?

In this brave, new eBay driven era, _nothing_ is easy to find anymore. The
local thrift shops do not accept electronics and the recyclers send everything
out for reclamation of metals. It is purely impossible to locate classic
systems outside of eBay or sheer luck...

I'm not aware of what "regular" BASIC vs. "binary load" BASIC are, nor do I (yet) understand what you mean by autorun.

I spent some time reading the Atari 8-bit FAQ, but it doesn't get down to this sort of detail.

Thanks for your input, I'll try to follow up on those terms and learn more about these units and their software environment.

Steve

A "regular" basic is the one that comes on a cartridge for the A800. In
the XL, this was part of the hardware. A "binary load" basic is a
cartridge image that is bootstrapped from disk. Typically, there a
filing system on said disk (Atari jargon: "A DOS") plus a binary-load
file that is loaded by the DOS as part of the bootstrap process - this
is then named "AUTORUN.SYS", a "magic" filename the dos looks for when
starting the system, thus "autorun file". The problem might be that the
mentioned program uses exactly the same mechanism to load itself, which
makes loading the program automatically a bit hard. One can try to first
boot the basic itself, and then locate the proper basic program and run
that manually from the basic interpreter.

So long,
     Thomas

I have a game file which is in CAS fornat. The emulator that I found seems
to be lookign for another ROM image file.
Is there a way of converting CAS image files?? Is there an emulator that
works with CAS files??

Thanks

From Atari800winplus emulator HELP about
loading CAS images:

****

Usage

The emulator can only read, not write, the cassette images. Moreover, it
requires the SIO patch enabled to emulate the cassette player.

To insert a cassette image, use File/Attach tape (Alt+T) or Cassette Control
dialog box. You can rewind tape by moving the slider, but usually a cassette
image contains only one Atari file (real cassettes often contained many).

To boot the tape, hold Atari Start key (F4), while performing cold start
(Shift+F5). Then press Space key. Or just use File/Autoboot image (Alt+B).

Note

The emulated cassette transmission is very fast, but before it starts, the
Atari OS has ca. 9 second delay. You have to wait that time, or you can use
Full speed (F7) if you like.

****

I'm sure you could make a BASIC cart from a
flash memory cart.

snip

>

OK. The 800 isn't able to run some things,
because it has only 48K memory, can't run
things that use memory under the OS, like
XL/XE machines can, for example Sparta(FTe)DOS.

> > It shouldn't be hard to find a BASIC cart, but

People sell carts from time to time on ebaY.
There are some vendors that will sell you a BASIC
cart, such as Bravo Sierra (Ben Smith), Video 61
(Lance Ringquist), www.myatari.com B&C computer
visions. I'm pretty sure you could get a BASIC
cart for under $30 shipped to you.
There are three versions of BASIC, but any of the
three will probably work for the financial prog.

By 'regular' BASIC, I mean BASIC in ROM, either
built in like on the XL/XE or inserted on the 800.

Binary load BASIC does the same thing pretty much.
It is a normal binary file that you can (L) from Atari
DOS 2/2.5 (Load and Run).
Atari DOS 2/2.5 has a single 'autorun.sys' file
that will load and run at bootup. Later DOSes,
like SmartDOS, MyDOS 4.53 are menu DOSes
that can autoload multiple binary load files at bootup.
You just name the files FILE1.AR1 FILE2.AR2
in SmartDOS, I forget what the filename extension has to
be in MyDOS.
 I guess some of this is a bit advanced and hard to
explain/understand.
Your wish to make stuff work on the 800 is common,
the 800 is a really neat machine.
I can send you a BASIC B file that will load and run
on any Atari8, including the 800. (I believe BASIC,
version B, will cause the fewest headaches, but I'm
pretty much alone in that belief, BASIC C being the
commonly preferred.)

Excellent! Thanks for the clear, concise explanation. Seems like this issue
should be covered in the FAQ. I'll be very embarrassed if it was and I missed it!

Steve

I'll look into that. eBay prices tend towards the stupid. Also, the last couple of Atari 8-bit purchases arrived smashed (no padding material, if you can believe it) and/or non-functional. Took a while to troubleshoot the 1050 drives down to a shorted tantalum cap and defective 2893 floppy controller respectively. The 800XL was brutalized in shipment and had a poorly-installed SuperDOS add-on. One of things I like about this older gear is that it's actually possible to troubleshoot to a component level!

Not advanced at all. I'm a CS person with years of experience in front of machines large and small. I never did learn how to absorb new environments by osmosis, though :-). Just need a few helpful hints to get me on the right track. Appreciate the pointers!

Ok..I found an emulator called xformer 8. when I start it up and select
atari 800 DOS..I get a ready prompt on the screen.

How do I load my game file, which is a CAS format. What command do i need to
give at the ready prompt to load the file?

Probably Xformer 8 won't load CAS files, I think.
You need Atari800WinPlus, will load CAS files.
The fact you get the READY prompt means you're
booting with BASIC, which you don't want to do
for most CAS files. There is another recent post
here that states how to load CAS files in A800WPlus.
To boot without BASIC, you need to hold OPTION
on a real computer at power on, but for Xformer, you need to turn off BASIC
toolbar Options.

I have asked a few questions about getting atari games, emulators etc, but I
think I am missing a key component as well..

Atari800win seems to have a screen file asking for the location of the ROM.
I thought that was the game file itself, but now I'm thinking you need an
Atari ROM as well. Any ideas as to where I can get one.

If I am wrong, what the heck do you actually enter on the Atariwin800 Rom
Image screen??

eg: what exactly does this mean?

The XL/XE button locates the ROM image of the Operating System for XL/XE
machines. The file must be 16 KB long.

Thanks kindly :)

xf25.zip under the heading Original XL ROM contains the following roms:

  inflating: DEMOS2.XFD
  inflating: XF25.EXE
  inflating: ATARIBAS.ROM
  inflating: ATARIOSB.ROM
  inflating: ATARIXL.ROM
  inflating: XF25.DOC
  inflating: DOS25.XFD
  inflating: DEMOS1.XFD
  inflating: MYDOS45D.ATR

ATARIOSB.ROM is the rom used when emulating atari 400/800s
ATARIXL.ROM is used when you want to emulate one of the xls

here is a link:
http://sourceforge.net/project/showfiles.php?group_id=40606&package_id=32947

you will have to figure out exactly where to put them so the emulator can find
them, or change the config file to point to where they are located. Good Luck!

After the pain of setup is done there is a wealth of programs to run!

BASIC B hung several times for me, specifically when typing in long
listings. I wonder why you wouldn't call this a headache?

What's the matter with Rev.C?

So long,
     Thomas

Hi Michael, you may wish to add Page6.org to your list, it is run by Paul Rixon (London, U.K)
http://www.page6.org

Page6 & Page6 New Atari User magazine originally published by Page 6 publishing, Stafford, U.K.

As far as i can see the whole Atari 8-bit magazine issue disks, the whole Atari 8-bit & Atari ST Page 6 public domain library disks, Page 6 Atari 8-bit commercial software disks and currently from issue 1 up to issue 31 of page 6 magazine is available to download free of charge, also Paul has an Atari 8-bit or Atari ST software cd for sale.

Also there is a forum that is in deperate need of more members, the current membership is only 30 in total, Paul wishes to make contact with anyone who contributed to the magazine or disks.

I am the original developer of Assembly Source Interface V1.2A (Page 6 pd #184), V1.5AM (DGS pd #171 buggy 92), V1.5AM Revised Edition (TWAUG pd #401 April 94), V1.5AM+ (DGS pd #171 September 94) also available on:

Umich (ASI15AM)
http://tinyurl.com/4bdng

Raf's Atari 8-bit page ((ASI V1.5++ unreleased) developer)
http://tinyurl.com/49fqe4

if you need to contact me the easy way of getting my email & snail address is by downloading Assembly Source Interface V1.2A and looking in the `UPDATE.DOC' file, note Paul has not updated his copy yet!

Setting up Atari800Win is one of the easiest emulators to configure.
You don't know setup pain until you've tried to set up Daphne or
MAMEwah...

Thomas:
I've spent many, many hours programming in Atari
BASIC. All three, A B C, will hang from time to
time, ususally after you've put a lot of coding in
and didn't save it.
I found that B hangs the least.
That and the fact that B is a recompile with many
differences to A, whereas C is a less than 10 byte
 patch to B.
I'm aware of the 'add 16 bytes every SAVE' problem
with B, and will LIST, NEW, ENTER, SAVE about
every five SAVEs.   I also wrote a program to salvage
B SAVEs that no longer LOAD and RUN, similar
to Jindroush's CHKBAS.
I found that B has the least hangs, but I didn't quantify
it, scientifically, just an impression. I used B for
many years before I knew there was a C and A,
guess I got used to it.
Regards

C is exactly a 12 byte patch to B.
It is just a patch, not a re-compile, offsets are
the same, just 12 differences in three places.
I tried C when I learned of it, thinking "Great
no more SAVE problems", after a brief effort
using it, it hung more than B and I went back
to B.

Oh, and bringing my post back on topic, one example is my last box I

got atari800 going with svga to get great fullscreen going. This was
before the SDL version was out. Yikes, kernel recompile, figuring out
kernel boot commands for my onboard video etc, svglib-helper kernel module,=
 yikes! Just use SDL now.
Was Now I just use SDL!

I think you got a bad cartridge. Rev. C isn't that bad, just eliminates
the +16 byte save problem and the editing crash bug. As much as I can
remember, the only crash problem/fix B vs. C was when you used the
editor to delete<or add?> a line ~128 bytes long. If you didn't create those

```
10 IF X > 1 THEN GOTO 20 ELSE GOSUB 200:FOR N=0
TO 20 POKE 1536+N, A(N,N):...
...
...
20 END
```

Three +lines long, it would never happen. I hated that type of code and
I seem to recall only hitting the bug when I was working on other
peoples code or using strings for data or code storage. Just have to
remember it was the editor and both B&C would run good code exactly the
same.

Rick

I do have a C cart, don't remember if I used that
or a binary load version. I compare B and C
binary load copies, to get the differences.
Making a binary load BASIC is just prepending
a ML to move RAMTOP down to 9FFF and
doing a CIOV to screen....

```
10 CIOV=$E456
20 IOCB=$350
30 RAMTOP=$6A
32  *=$600
40  LDA #$0C
50  STA IOCB+2
52  LDX #$10
```

```
60  JSR CIOV
70  LDA #$79
80  STA RAMTOP
0110  LDA #03
0120  STA IOCB+2
0130 L1
0140  LDA EDITOR
0150  LDA L1+1
0160  STA IOCB+4
0170  LDA L1+2
0180  STA IOCB+5
0190  LDA #$08
0200  STA IOCB+$0A
0210  LDX #$10
0220  JSR CIOV
0230  LDA #$0C
0240  STA IOCB+2
0250  LDX #$10
0260  JSR CIOV
0262  LDA #$79
0264  STA $6A
0270  RTS
0280 EDITOR
0290  .BYTE "E:",155
0310  *=$2E2
0320  .BYTE 0,6
0330  .END
```

```

That C is just a patch of B is known. It fixes specifically the
memory-move routine, required when shifting memory for variables around,
which then could hang. Thus, I wonder what hangs in C. I had B for
years, and it was an annoyance.

So long,
     Thomas

I respect your experience with B. Yes, it is/was
an annoyance, it would freeze, almost Microsoft.
However, I'd like to know if you spent considerable
time working with C? I didn't work with it long,
maybe mine was/is a bad copy, because it was
worse than B. I don't remember, it may have
had problems like not LISTing, or freezes.
Right... If you have experience with C, I'd like
to hear about it.

While I tried to remember... I remembered some
other stuff.
If you LIST a long program, often it doesn't
LIST properly, won't ENTER.
I found that if you put:
0 REM
in the computer before an ENTER, it would
work, when ENTERing without it would fail.

Often, after a long LIST, you could try to ENTER
and at a point in the process a bunch of garbage
would start. Therefore it was necessary to LIST
to screen to verify that the ENTER completed.

It is part of a rule to save your work regularly.
And verify it. TS 2068 computers used a tape
and after you saved to tape, you always should
verify. The same is true with disk images on
PC with Ghost or Nero Backitup, you should
verify. Sometimes I just use a program that
reads through a file, like a CRC checker. I'm
not interested in the CRC, just want to verify
that I can read all the way through the file.

> publishing, Stafford, U.K.

I've got it in the vendors list, as I do the other authorized digitized
mag sites that I know about:

page6.org (Paul Rixon)   2/05
United Kingdom
http://www.page6.org/
   Publisher: authorized digitized editions of Page 6 (1982-1989),
Page 6 Atari User (1989), New Atari User (1989-1998)

Does that look ok?

Or did you have in mind to add it to the "Welcome" FAQ?

-Michael

This is no help w/ the CAS file load, but the Ready prompt attempting DOS
access might indicate that you did not boot the system w/ a DOS disk image
in drive 1.
-Jess

I had a first generation 800XL, which, obviously, came with B, and
that's where I got my basic experience, you're right. It would be still
interesting to see where C hangs - I know it's hard to reproduce, the
MEMLO must be exactly identical.

Back then, I only had a tape recorder, and LISTing and re-ENTERing did
take very long. It wasn't really an acceptable solution.

C came later. I burned it as EPROM and installed it as replacement,
though at that time, I no longer entered many programs by hand. If I
did, I used TURBO-BASIC, which never hung for me.

So long,
     Thomas

I, too, had a first generation 800XL. It has copper
switches in the keyboard, no mylar sheet.
This was 1984, if I recall, and I don't know when
C came out, probably about the time of the 130XE.
I tried three Coleco Adams before my son told me
to get an Atari. The Adams included a printer.
All three Adams smoked the printer (I mean literal
smoke coming out of the printer.) so I took them
back. The third or fourth time back I switched to
an Atari. It was $300 for the 800XL, $300 for
a 1027 'letter quality' printer, $80 for an Atariwriter
cart. My first disk drive came a month later, also
about $325 for a Rana 1000. I paid $49 for
SmartDOS to get a double dens. DOS. My
first game was from ANALOG, Crash Dive,
I couldn't understand all the hex DATA statements
in the type-in. My first disk game was 'Hellcat
Ace' by the same guy who still does PC games,
I forget his name.
Soon I was doing a BBS with a Rana and two
Indus GT. BBS at 300 baud.

Mine too, was a first gen. Atari 800XL. About
January 1984. It has copper switches in the keyboard,
no mylar sheet. I did a lot of BASIC stuff. Type-ins
from ANALOG. I believe that the really bad
reputation for Atari BASIC came with the version C.
Almost nobody did anything with C maybe. Everyone
wanted to do TurboBasic, ACTION!, Mac65.
OSS BASIC XE or XL. The real programmers
used a number of macro assemblers.
I've never heard from someone who used C
extensively.

I have an Atari800 that is showning some strange memory problems.

I have a number of memory cards (512K Magna, 32K Mosaic, and a bunch of
standard 16K cards).

When I run the SALT memory test when 3x16K cards are installed, it shows
only 40K of memory is installed (no there isn't a cart in there). Running
the same test on a virtual 800 in Atari800WinPlus shows 48K.

I've tried rearranging the 3 16K cards and regardless of the config it only
shows 40K installed.

Running the RAM test in this config shows all the 40K as OK, But the main
screen just doesn't see the extra 8K. Is there anything on the motherboard
that might cause this problem (aside from 1 or more bad RAM cards).

Running the tests of my 32K Mosaic or 512K Magna cards are consistently

showing RAM errors, so I'm ignoring that at this point and just trying to
find out what is wrong with the setup.

Thanks.

Jason Harmon

I was gonna say that Basic is in that area but I see that you have no
carts in it. Does the DOS you are using set flags so you cant use that
section of RAM (mark it as ROM?) even if there is no ROM there?

Hi Keith,

Thanks for the info, I had seen that site before. Having all of the paper mags but #5 is the only reason I was hoping to purchase it. I guess I could always print out what is on that site. I guess I'm just being a completist collector. :)

thanks for the help guys,
~brian

I'm with you. I am 2 shy of all the Antic and about 8 shy of the full Analog
set. I have started on STart and ST Log now. Have most all the disks for
Antic, Analog and STart.

I'm not using a DOS in this case. It's an autoboot disk image I'm using.

The really wierd thing is that I am using the same disk image from
Atari800WinPlus (which shows 48K), and the real 800 (showing 40K) via APE.

-Jason

I have dups of some ANALOG and Antic, not
in the first 20 or so. The first ten are the hardest
to come by.
I'd be glad to check my dups next month (April),
if you need some I have.

Not a lot of help but 40k to me implies the cartridge detection and
memory remapping has probably gone south. That is, something like an IC
fried in the cartridge present mode which would make that 8k invisible.

Hey, Jason;
Any way you could send an ATR of that autoboot disk image? I would like to
see the SALT utilities...

thnx,
RetroJess

I also have several duplicate Antic and a few Analog, mostly above #12 or
so... The bad news is postage is getting completely outrageous and mailer
envelopes too!!!

Greetings!

For all you Trek-heads out there, I found a PD Star Trek game called
Enterprise.
It's written in Atari BASIC, and barely fits in memory.
It was made on October 15, 1983, by G. T. Harvey.
Since the 25th anniversary is just over 6 months away, I'm going to try to
mod it.

I remember playing a modded version of it back in 1986.
It was the very first Star Trek game I ever played.
That was the year I got my first Atari and started learning BASIC.

If anyone else is interested in playing (or even modding) it, it can be
found here:

http://www.langesite.com/atari/Holmes/Holmes%203/BELLCOM/001.ATR

The .atr has it's own menu system.

ENTPRIS1.BAS is the tutorial.
ENTPRIS2.BAS is the actual game.
The other Star Trek files are a different game.

If anyone wants to mod it, I would recommend using Turbo Basic or Basic XE.
As I said, this game barely fits in memory!

-Stan

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

The Atari computer intellectual property rights are currently owned by Atari Interactive, which is managed by today's Atari, Inc. Both of these are divisions of Infogrames Entertainment.

Hi,

Method 2 is a little involved but.... disassemble the entire computer.

Slightly pry up all socketed chips.

Push back down

Reassemble and test.

What is method 1? Pick up and drop from 2" onto a hard surface.

Hello,

Rix Computer Activity Tools:
I have released several more NEW items at my site....

SIO BOB is a break out board for the SIO port. Gives access to the
lines. AND...
PEEKER is the first board for SIO BOB. Shows activity on the data
lines. Also works with Spider.
http://morethangames.a8maestro.com/proda8/adv-ek0112.htm. 14 items.

SPEEDIER: Type 2...Same speedier but in a hood for db25 to RJ45(ethernet
type cable), so makes a much smaller set.
http://morethangames.a8maestro.com/proda8/adv-eh0106.htm.   1 item.

Ricks' Electronics Entertainment Emporium:
Simple Mixer..mixes several computers, MP3/CD/Tape plyers thru 1 set of
powered speakers. AND...
Skinny Mixer...For car radio or portable speaker use, mixes 2 items.
http://morethangames.a8maestro.com/prodmisc/adv-lh0001.htm.   2 items.

More items soon.

Rick D.

Here is a rip of a cool dvd that has some of the preshow meet and
greet
at the Computer History Museum. The Woz and Jack Tramiel from a spy
cam
view.

This is the correct link for the Impact of the C64 video:
http://blip.tv/file/792025

Cheers!

Hi, I'm Ben here in Portland, Oregon USA! Proprietor of Bravo Sierra Computers! Occupying a unique niche in the Atari World! Most Atari Dealers sell NEW, I also sell Used Atari Goods! Not only do I sell NEW Atari Goods at a competitive price, I also sell used Atari Goods you wont find at Swap Meets, Thrift Stores or Auction Sites! And I sell for less! Unlike those remaining anonymous! I test Goods before I sell them. Not only can I sell you some Great New stuff! I can also sell you hard to find 2nd Hand Goods, because I'm the guy people goto to give Ataris a New Home! Saving Orphaned Atari's from Oblivion!Goto http://BensCatalogs.Atari.org or (503)256-9974!

I've got a fast turnaround rate. Usually, Once I receive payment your order goes out the same day. Customers love the speedy service! I have lots of Atari SoftWare & Books. Which I can send by Media Mail Rate!

Please Direct all Replies Through E-Mail to: BenSells@Atari.org or Atari@aracnet.com. If you can't reach me, see my info at the Bottom!

Atari 8 Bit and ST Games/Software, Hardware/Accessories and Books/References! FREE Catalogs @ http://BenSells.Atari.org or http://BensCatalogs.Atari.org or Catalogs Requested by E-Mail at Atari@aracnet.com or BenSells@Atari.org and Please Specify Atari 8 Bit, ST or Both! Or Call Ben anytime at (503)256-9974!

My understanding is that there are two versions of the 810. The most common
type (don't know the numbers made) has the MPI mechanism. Versions with the
Tandon mechanism were also made in smaller numbers (I have one of these).

I don't know the 815, but all the double density
drives I've used (1050 USDBLR, Rana 1000,
Indus GT) it will detect the density when you
boot up. You stick a single dens boot disk
in and it will boot, same with stick a dbl dens
disk in and it will detect and boot.
I wrote a density set program that worked after
bootup, you could set single, dble, enhanced.
I'm not sure it would work on an 815.
The Indus and/or the Rana could set dens.
on the from panel, if I recall.
You need a dbl dens DOS to use dbl dens disks.
SmartDOS, MyDOS, FTe(Sparta)DOS. Atari
DOS 2/2.5 won't do dbl. 2.5 does enhanced.

              Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

The Atari computer intellectual property rights are currently owned by Atari Interactive, which is managed by today's Atari, Inc. Both of these are divisions of Infogrames Entertainment.

NEWSGROUP BACKGROUND
comp.sys.atari.8bit was created in November 1986 (as part of the Great Renaming) as a direct replacement for: net.micro.atari8

comp.sys.atari.8bit is unmoderated, and has no formal newsgroup charter.

The comp.* hierarchy of Usenet newsgroups is managed by the Big-8 Management Board: http://www.big-8.org/

RELATED USENET NEWSGROUPS
alt.binaries.comp.atari8bit
Programs for Atari's 6502-based orphans.

comp.sys.atari.advocacy
Attacking and defending Atari computers.

comp.sys.atari.announce
Atari related hard/software announcements. (Moderated)
Moderator: Kevin Savetz
comp.sys.atari.announce web page: http://www.atariarchives.org/csaa/

comp.sys.atari.programmer
Programming on the Atari computer.

Subject: Introduction

Conventions

All commercial vendors, developers, publishers, and repair shops should be listed here. "Active" PD/freeware/shareware developers should also be listed. Persons or entities holding rights to products, but not selling or supporting them in any way, should NOT be listed here.

"Vendor" = Reseller of products produced by others. Types of products sold are given in categories: new hardware, used hardware, PD/freeware/shareware, (new) commercial software, used (commercial) software.

"Developer" = Producer of products. Titles of products produced by the developer are listed. No prices are given.

"Publisher" = Publishes a print or disk magazine, or a book. Complete subscription or ordering information should be given, including prices. Authorized online publishers of originally print or disk magazines are also listed. Online books are not listed.

"Repair Shop" = Can repair 8-bit Atari or related hardware devices. Be sure to make advance contact before sending anything to work on!

Entries are presented alphabetically by company name, or publication title. If no company name exists, a personal name is used. "See" references indicate complete information may be found under the given heading. "See also" references indicate closely-related information may be found under the given heading.

The month/year that vendor information was most recently fully verified is given at the "upper-right" of each entry.

Every entry must contain a valid postal address or web page address.

Unless explicitly requested by the vendor, no entries will include an email address due to the overwhelming amount of spam that would result.

The following is from http://www.upu.int/irc/en/ (2004.03.27)

When one writes to a stranger and requests a reply, it is considered polite to enclose a self-addressed stamped envelope. This works well when both persons live in the same country. However, if they are from different countries, the enclosed postage stamp will not be valid.

This technical problem was solved in 1906 when the Universal Postal Union, during its Congress in Rome, introduced the International Reply Coupon service. International Reply Coupons (IRC) are exchangeable in all member

countries for the minimum postage of a priority item or an unregistered airmail letter sent to a foreign country.

The UPU's International Bureau processes approximately six million coupons each year and takes care of all accounting aspects. Developed countries are the largest users. The International Bureau does not sell ICRs directly to customers; they must buy them from their local post office. Although they are not obliged to sell ICRs, it is mandatory for all Posts of the UPU member countries to exchange the coupons.

Verfications -> YOU!

This list is in a constant state of development, and comes with no guarantees. Information of this nature constantly ages; therefore, the information contained in this list is constantly updated. Please use the latest release of this list whenever possible!

Remember, the success of this list is dependent on YOU, the reader, to send me updates that correct errors that you find. If you use this list, please do your part in keeping it useful for everyone!

Greetings everyone!

Here are the lucky and the proud winner(s) of the March prize(s)
at The DarkForce! BBS:

March 2008
1. ST Magazine - Tobiasj wins the free 3 mag. subscription

Congratulations to our winner(s)!

Also, here is Februarys prize:

April 2008
1. ST Magazine - some lucky Atari caller will win a free 3 magazine
subscription.

Congratulations to our winner, and good luck to this months callers!

 :)

Hi, I have an Axiom AT-846 (eBay special) but no manual. Does anyone know of
the manual being available online (i.e. a scanned pdf)? Or is there anything
you can tell me about its operation in lieu of a manual?

Regards,
Doug

Well...I think Atari 815 has only ONE density mode, Double Density, MFM. I guess that 815 can not detect the density on the boot sector but it can read 256 bytes on boot 3 sectors. I think it is not compatible backward to Single Density because 815 does not have FM encoding. you guy agree?

The most disk drives have two modes, FM and MFM. They can detect the density on the boot three 128 bytes sectors.

Either there was a third supplier of 810 mechanisms (Shugart), or the info
on that page is wrong. I have both types of 810, one Tandon, and one MPI
(and the mechanisms are clearly labeled as such).

B&C has parts for both types of 810 in their inventory:

http://www.myatari.com/atarixlh.txt

PRA032   MECH 810 MPI DRIVE   25.00

PRA033   MECH 810 TANDON DRIVE   25.00
PRA044   MOTOR 810 MPI DRIVE   10.00
PRA043   MOTOR 810 TANDON   10.00
PRA039   BELT 810 MPI DRIVE   5.00
PRA038   BELT 810/1050 TANDON DRIV   7.95

-Jason Harmon

I still don't understand why 815 has dual drive in one unit. 815 should have
ONE drive, one drive is good enough. One MFM drive is much affordable than
dual drive! Atari is stupid!

Atari 815 MFM was poor reliable drive. Why not 815 use GCR instead of MFM?
Commdore and Apple Disk Drive have GCR encoding. They have not much problem.
GCR drives formats the 256 bytes per sector.

I came to this same conclusion a while back.

It'd be even better if an actual 815 owner could verify!

Hi, I'm Ben Smith here in Portland, Oregon USA! Proprietor of Bravo Sierra Computers! Occupying a unique niche in the Atari World! Most Atari Dealers sell NEW, I also sell Used Atari Goods! Not only do I sell NEW Atari Goods at a competitive price, I also sell used Atari Goods you wont find at Swap Meets, Thrift Stores or Auction Sites! And I sell for less! Unlike those remaining anonymous! I test Goods before I sell them. Not only can I sell you some Great New stuff! I can also sell you hard to find 2nd Hand Goods, because I'm the guy people goto to give Ataris a New Home! Saving Orphaned Atari's from Oblivion!Goto http://BensCatalogs.Atari.org or (503)256-9974!

I've got a fast turnaround rate. Usually, Once I receive payment your order goes out the same day. Customers love the speedy service! I have lots of Atari SoftWare & Books. Which I can send by Media Mail Rate!

Please Direct all Replies Through E-Mail to: BenSells@Atari.org or Atari@aracnet.com. If you can't reach me, see my info at the Bottom!

Atari 8 Bit and ST Games/Software, Hardware/Accessories and Books/References! FREE Catalogs @ http://BenSells.Atari.org or http://BensCatalogs.Atari.org or Catalogs Requested by E-Mail at Atari@aracnet.com or BenSells@Atari.org and Please Specify Atari 8 Bit, ST or Both! Or Call Ben anytime at (503)256-9974!

I had two friends that worked there. Atari was out of control at the
time in that management was clueless and engineering lacked focus and
direction. There was little accountability for job performance.
>
> Atari 815 MFM was poor reliable drive. Why not 815 use GCR instead of
> MFM? Commdore and Apple Disk Drive have GCR encoding. They have not much
> problem. GCR drives formats the 256 bytes per sector.

MFM was OK, it is just that with the lack of accountability so much
money was wasted that everything done at Atari had *HUGE* overhead
attached to it.

I'm not sure if I have my facts straight but the reason why the 815 was
dropped was because you could buy two 1050s for less. The 1050 was done
out of house, at Tandon IIRC, so it did not have to bear the burden of
waste that anyone trying to do something at Atari did. If you were the
greatest, hardest working engineer in the world, everything you did
would still cost multiples of what it could be done for elsewhere so it
would fail.

But that was SOP for the Valley at the time and high tech industries at
the time. In my own, pharmaceuticals, we billed ~700% as overhead.

Things were different: I remember ~a 256k memory expansion for a DEC was
something like $250,000. For that price a service tech from DEC would
fly out to your location and install it. Concept of Federal Express it
overnight and have the user install it had not been created yet!

Rick

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

The Atari computer intellectual property rights are currently owned by Atari Interactive, which is managed by today's Atari, Inc. Both of these are divisions of Infogrames Entertainment.

Yep, that's my understanding of US law, too, which allows even more
lead time to get documentation out (if you're confident of your
filing schedule).

And you only have to "offer" something for sale that is described
as incorporating the patented IP to start the clock.

Not so, assuming he was talking about the US.

In most countries, publication closes the door to application, but
in the US it starts a 1 year clock.

> It was/is a bit of a problem because of the "Publish or Perish" and

And even nondisclosure is no good if you are trying to make a sale!
Revealing any of the IP in an effort to commercially advance the
invention starts the US clock--one year to file.

In any case, the point is that US patent considerations are not in
any way affected by revealing the details of an object already being
sold. Offering it for sale *is* publication--as any reverse-engineer
will attest. ;-)

I should have clarified that I was talking about the 8-bit Apples,
not the GUI- and tool-based IIgs.

Hi, I'm Ben Smith here in Portland, Oregon USA! Proprietor of Bravo Sierra
Computers! Occupying a unique niche in the Atari World! Most Atari Dealers
sell NEW, I also sell Used Atari Goods! Not only do I sell NEW Atari Goods
at a competitive price, I also sell used Atari Goods you wont find at Swap
Meets, Thrift Stores or Auction Sites! And I sell for less! Unlike those
remaining anonymous! I test Goods before I sell them. Not only can I sell
you some Great New stuff! I can also sell you hard to find 2nd Hand Goods,
because I'm the guy people goto to give Ataris a New Home! Saving Orphaned
Atari's from Oblivion!Goto http://BensCatalogs.Atari.org or (503)256-9974!

I've got a fast turnaround rate. Usually, Once I receive payment your
order goes out the same day. Customers love the speedy service! I have
lots of Atari SoftWare & Books. Which I can send by Media Mail Rate!

Please Direct all Replies Through E-Mail to: BenSells@Atari.org or
Atari@aracnet.com. If you can't reach me, see my info at the Bottom!

Atari 8 Bit and ST Games/Software, Hardware/Accessories and Books/References!
FREE Catalogs @ http://BenSells.Atari.org or http://BensCatalogs.Atari.org or
Catalogs Requested by E-Mail at Atari@aracnet.com or BenSells@Atari.org and
Please Specify Atari 8 Bit, ST or Both! Or Call Ben anytime at (503)256-9974!

Hello,

I'd like to formally announce the new Vintage Computer and Gaming Marketplace located at <http://marketplace.vintage-computer.com>. There's some Atari stuff on there now!

This new addition to <http://www.Vintage-Computer.com> will hopefully grow to become the preferred venue for buying and selling vintage computing and gaming gear on the net.

The software used for the marketplace was chosen for its simplicity and features which make it a viable alternative to the other, more generalized, auction and sales venues on the web.

Items can be posted in auction format (buy-it-now can be used for flat-rate sales) with descriptions and a photo gallery for each. Bids on items within the last two minutes of an auction will extend that auction by 30 minutes, making sniping a thing of the past.

NOTE: There are absolutely no charges for posting listings to the marketplace or for buying items listed there. The venue is completely free!

I believe that the popularity of the Vintage Computer Forums and the Vintage-Computer.com site will help drive buyers and sellers to the new marketplace to the benefit of the entire vintage computing and gaming community.

I encourage anyone interested or potentially interested in buying or selling vintage computing and/or gaming gear to please visit the new site, sign up and, by all means, tell your friends!

Thank you,

Erik Klein

We are talking about the USA.

You obviously have a misconception about the language used.

 From the US Patent/trademark web page
http://www.uspto.gov/web/offices/pac/doc/general/index.html#patent

In order for an invention to be patentable it must be new as defined in
the patent law, which provides that an invention cannot be patented if:
(a) the invention was known or used by others in this country, or
patented or described in a printed publication in this or a foreign
country, before the invention thereof by the applicant for patent, or
(b) the invention was patented or described in a printed publication in
this or a foreign country or in public use or on sale in this country
more than one year prior to the application for patent in the United
States . . .

>
> In most countries, publication closes the door to application, but
> in the US it starts a 1 year clock.

No. It is either [described]<immediate grounds for not granting>, [in
public use]<immediate grounds for not granting>, *OR* [*SOLD*... for a
year].

There is a provisional type patent that you have to file if you want to
go to other parties. I have an acquaintance who didn't do this and took
engineering drawings to a machine shop to have one of his inventions
made. The machine shop stole/patented his device and he didn't have the
documentation to prove it. I think I recall the time limit on these as
being one year before you have to renew it or file the real patent, but
this is just considered round one of the process.

<snipped part that should stand corrected now>

Rick

The original MAC had very limited HW expansion capabilities. Access to the HW was through Apple supplied drivers. Almost no HW documenation was needed. The software was a modern design that relied on API's. The combination was intended to provide Apple with the opportunity to update SW and HW without having to worry about breaking existing applications. They only needed to support legacy APIs. A lot of this was driven by the trouble Apple had in maintaining backward compatibility in the II series. There were litterally dozens of "well known" routines in the Apple II ROM that had to stay at a specific address or any number of applications would break.

The original "Inside Macintosh" documentation for these APIs was extremely well done. Basically the "Inside Macintosh" documentation set the state of the art for technical documention. There was no need for ROM listings, and in fact ROM listings would have enabled software engineers to bypass the APIs and create all kinds of problems with backward compatibility for future generation machines.

Time would prove that the closed system concept had some merit as can be seen by the success of the I-MAC line. However the original implementation, without SCSI, USB and Firewire technology, was way too restrictive.

I certainly agree that there are wonderful benefits to a strong
architectural interface, as opposed to a "free-for-all" ROM listing
and schematic!

But, given the state of the art in the late-1970s-to-mid 1980s, it
was more important to throw open the doors and windows and see what
came of it than to presume that one had intuitively arrived at the
proper set of functionality and restrict users' creativity.

The result was a wonderful blooming of hardware and software
advances for personal computers--and more importantly, a bloom
of visions of what personal computing could become (besides storing
recipes and printing mailing lists ;-).

As is to be expected in the rhythm of things, the period of carefree
experimentation was followed by a period of dying off of virtually all
early "dead end" platforms and consolidation on a (slightly) newer but
evolvable standard that permitted the growth of a huge market in PCs.

Today we live on the high plateau attained by the creative momentum from
that volatile, expansive era--but a plateau nonetheless, constrained by
the many standards and complexities that enable the market.

As evolution continues, we can expect another revolution in computing,
in which the PC platform will play the role of the rigid mainframe in
the previous scenario, and new visions will emerge to reseed creativity
and make our "high plateau" seem like a valley.

The average life of a plateau seems to be 20-40 years, so it might be
soon. ;-) Of course, we don't have a sequel to Moore's "Law" to power
the engines this time--though perhaps massive parallelism might be
enough to do the trick...

Xref: g2news1.google.com comp.sys.atari.8bit:9261

I posted this in the atariage forums but thought I would post here as
well...

I am using APE with SIO2PC cable which is working great but I want to
be able to load .ATR disk images from my Atari 800XL. When I load APE
for Windows and Load the APE Warp .ATR disk image that comes with APE
I run a program called Remote.com on the Atari end. But it will not
let me browse directory or load disk images. When use the (L)oad image
it asks me if I want to use the find or spider feature. The find
feature searches for anything I put in. The Spider feature does
nothing when I type anything in.

If I use the Mirror feature on APE for Windows and leave it blank on
the windows end it works just fine on the Atari side for letting me
browse to my directory with raw Binary files and load them.

Hope all this makes sense. I really want to be able to use my Atari
without having to interact with my Windows System after APE for
Windows is loaded.

All the links to documentation on the Atarimax web site give a 404
page not found error. I purchased the cable from there and downloaded
APE but there was no documentation in the download archive.

Thanks!

There you have it--exactly as I was saying!

Obviously publication cannot preceed the *invention* (unless you were
perhaps publishing about a time machine ;-), but it can precede the
patent application by one year.

>> In most countries, publication closes the door to application, but
>> in the US it starts a 1 year clock.
>
>
> No. It is either [described]<immediate grounds for not granting>, [in
> public use]<immediate grounds for not granting>, *OR* [*SOLD*... for a
> year].

Remember, we're talking about publication *by the inventor*, so there's
no issue about the invention not being novel as a consequence of the
publication.

Clearly if someone *other* than the inventor published the invention
prior to the "inventor" filing, that would bar the patent, since the
filer did not invent anything novel. This has no bearing on publication
by the actual inventor or his agent.

I can't help.
I remember something about remote.com.
You have to access the PC hard drive with
some remote command, and I can't find it.
Seems like you type D0: or something like that
to access the PC hard drive. The remote commands
are the same as the APE DOS key commands.
Can't find an APE manual. I remember spider and
didn't and don't know what it means.
There may be manuals at atarimax.com.
I do know some features on the shareware version
are disabled, you have to buy it to get them.

Are you just the kind of ego who can't admit when he is wrong? It could
be a problem with your reading comprehension but I seriously doubt you
bothered reading the post from US Patent Office.

You still don't know what a patent is. Ignorance is curable but I am
afraid you kind of stupidity is forever. Even when confronted with the
official US Patent office release on what can be patented, you still

persist.

I kind of want to ask just what makes you think that you know better
then a guy who spent 35 years in R&D, two patent lawyers with a combined
80 years of experience, and the official web page of the US Patent
Office but I am afraid you may answer.

I give you on you.

PLONK!

Rick

My copy of the Apple IIe Technical Reference Manual is dated 1987, and I
think volume 3 of the IIGS toolbox reference came along some time after
that.

The programming info, schematics, etc. were dropped from the owner's manuals
that shipped with later Apple II equipment (the Super Serial Card manual,
for instance was printed in two forms: the original edition, which looked
like it was printed with a daisy-wheel printer and included source code for
the ROMs and a schematic, and a "lobotomized" edition, which looked like it
was typeset on a Mac with a laser printer and had little more than
installation instructions and maybe some simple programming info), but it
was usually still available in the tech references.

Go to www.vintagetechnology.co.uk to download latest issue (May '08).
Only =A30.99p / $1.99 for a 40+ page magazine devoted to the collection,
preservation and history of all aspects of digital and electronics
technology, including computers, arcade games, calculators, led
watches, phones, appliances, gadgets, robots, radio, audio and tv.

This issue features:

Old-school computer learning
Will my vintage electronics collection still work in 100 years time?
Flight sims - flying with home computers
Defender - the thinking man's arcade shoot-em up
Commodore PET computers
Early modems in the US & UK
Tomy handheld electronic games
Vintage LED clocks
Learn about maths the vintage way
Vintage voice recorders
First 'personal' radios
Interview with Richard Hanson - Superior Software founder
Repairing handheld games
HP calculator memories

Plus sections on museums & collections, latest events & news and book
review.

VTM aims to explore the legacy of recent past technology, explore new
=91electronica' which could become or already is collectible, be an
enjoyable resource for collectors & historians and celebrate the
history and personalities surrounding this subject.

What you accuse me of seems to apply perfectly to yourself.

You try reading your quote again:

"In order for an invention to be patentable it must be new as defined in
the patent law, which provides that an invention cannot be patented if:
(a) the invention was known or used by others in this country, or
patented or described in a printed publication in this or a foreign
country, before the invention thereof by the applicant for patent, or
(b) the invention was patented or described in a printed publication in
this or a foreign country or in public use or on sale in this country
more than one year prior to the application for patent in the United
States . . .

In (a), publication may not occur "before the *invention* thereof",
not before the application.

In (b), publication, sale, etc. must not occur "more than one year
prior to the *application* for patent".

It's really not that hard.

I must say, I've actually found this thread very interesting. It's one of
the few platform comparison discussions that isn't "My platform is great and
yours sucks and was created by incompetent low lifes."

Reasonably objective comparisons of these classic platforms, taking into
account the strengths and limitations of each, and the differences of when
they were designed (something few people seem to account for), could
actually strengthen the appreciation of all of them.

I see it as a problem with legaleze.
I can't understand the US Patent office statement.
And I can't really understand the argument here.
There was a guy who could make glass flowers
like no-one else. They were beautiful. People
wanted him to patent it so they could find out
how he did it. He didn't patent it. It increased
the value of his work before and after he died.
So, the moral is, don't patent stuff that can't
be reverse engineered, it doesn't do you any
good.

I largely agree with you about the utility of patents--a very
mixed bag.

The discussion here had to do with someone proposing that the
Atari technical details were not released with the machine because
of patent concerns--a position clearly not justified by law.

Russ, a patent grants you rights in exchange for ~telling the secret. If
you have already told people how to do the trick, i.e. published, it
isn't a secret anymore is it?

The gist of Sphincter Boy's argument is he thinks you can pantent
something after been published/become common knowledge. He could not be
more wrong.

He is just a troll, ignore him and his BS. I killfiled him already and I
can safely say he nothing intelligent to offer on the topic.

Rick

Steady on there Rick. I hope this isn't how you converse face-to-face.

I count at least 11 patents from Michael's career at HP & Burroughs.

Cheers,
Nick.

My guess is that Rick is used to be wrong, a lot. Probably doesn't have
many friends, either.

He couldn't be more wrong about this. Remember the topic and the
position that Atari was secreting information which resulted in it being
less successful.

John Harris in a post to comp.sys.atari.8bit July 1993 snipped to the
pertainent part.
****
It took me a long time, about 6 months after I got it, to read the book.
Mostly because others who read it first said I wouldn't be very thrilled by
what got written. I was dissappointed. Steve Levy spent a lot of time
with me and the other programmers at On-Line, took notes, and absolutely
new the real stories. Why do journelists need to rewrite things to make
the story more interesting? If they're going to make it up anyway, why go
to the trouble and expense to gather real data?

While I did disassemble Super-Breakout and BasketBall, and discover PMG and
some other machine secrets, bootleg copies of the Harware manuals showed up
just a few months later. It was a strange because I thought I had
information that no one else was going to know, and could use it to really
have an edge in 3rd party Atari games. I couldn't help but feel
disappointed that my 'edge' was taken away. Of course, that didn't last
too long, because there was a whole world inside those manuals that I never
would have found. After reading them, I was very happy to have that info
available for myself, and everyone else. Instead, Levy told the story
of the 'Wonder Boy' who figured it all out on his own.
****

I pointed out he was correct about the 2600. I and others said he was
wrong about the Atari computers. He's been nitpicking ever since. BTW: I
just looked at my technical reference and it is copyrighted 1982.

While that is wonderful for him and I am sure he is a bright guy, the
way he drifted the thread was masterful, it means nothing in this
debate. IMO: The only thing that does matter is John Harris and what he
experienced since he was the one given credit for reverse engineering
the Atari. You will find a quote from one of his posts in the reply I
made to Charlie below.

John also had some comments on the topic of relative success of the
Apple II vs. Atari 800 elsewhere. IIRC he blamed it on marketing not
wanting to ~ruin the image of the Atari as a game machine. This
obviously helped kill it in education and business. IMO it was dead in
the water with respect to business anyway. Those were the days of
"Nobody ever gets fired for buying an IBM."

Rick

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

The Atari computer intellectual property rights are currently owned by Atari Interactive, which is managed by today's Atari, Inc. Both of these are divisions of Infogrames Entertainment.

NEWSGROUP BACKGROUND

comp.sys.atari.8bit was created in November 1986 (as part of the Great Renaming) as a direct replacement for: net.micro.atari8

comp.sys.atari.8bit is unmoderated, and has no formal newsgroup charter.

The comp.* hierarchy of Usenet newsgroups is managed by the Big-8 Management Board: http://www.big-8.org/

RELATED USENET NEWSGROUPS

alt.binaries.comp.atari8bit

Just to go entirely off-topic, this isn't quite right as the Commodore PET/CBM drives had two 6502s in interleaved operation, one for talking to the host computer and one for talking to the actual drive hardware. Those drives were reasonably fast though expensive.

But then when they ported their DOS code to a single-CPU design for the cheaper home computer line they kept this logic around (one CPU now alternately impersonating the two CPUs of the old design), which made the DOS really weird (the two "personalities" didn't simply call each other as needed but rather communicated via command lists in RAM) and contributed to its slowness.

I'm impressed! I would have expected a little more cost-cutting
than that. ;-)

A curious design history--thanks for the info!

Remember, the original PET, had the IEEE-488 bus for expansion, aka
GPIB. A parallel bus that allowed multiple devices. WHen the PET came
along, it was basically the cheapest computer that had the bus, which I
seem to recall got it a lot of attention in labs and such that had
peripheral equipment like test equipment that had the bus and suddenly
they could buy cheap computers to control the equipment.

So presumably it was worth spending money on the drives that connected
via that bus. I seem to recall they were expensive, though on the other
hand given one main reason the 6502 saw a lot of use in those all in one
computers was because it cost $20 in single quantities, a second 6502
likely didn't add that much to the cost.

Remember, the C-64 drives that were previously discussed used a serial
bus, which slowed things down considerably. A parallel transfer
would make a big difference.

   Michael

And Commodore owned MOS so they surely got the chips
a bit cheaper anyway.

bye

Another cross post with nothing to contribute.

Did you even read the web page you cite?

"This time line applies to utility patents filed in 2001 or later, and
assumes that you will start with a"

We are talking about 1979-1982. Patent law has changed since then. You
can even patent plants now for the first time in 200 years. Once more,
this is BS drift that just clouds the issue of relative discussion of
the two platforms. If you want to talk patent law not specific to the
computers in question, go to alt.patents or something. I would say take
it to email if you have anything about it to say to me, but I am pretty
sure the kill file you are now going in will delete those.

Did you even check my reply to Charlie quoting John Harris? John is the
person given credit in the popular press with reverse engineering the
Atari computers and *HE* says it didn't happen. He says he had the
manual just like a number of people here said was available.

On one of your points, yes, I am wrong a lot and I admit it. The problem
here is: I am not wrong this time and a couple of people are being
intellectually dishonest in trying to bully a 'win'.

Your opinion is of no consequence to me. People in comp.sys.Atari.8bit
have known me for close to 20 years and some of my most frequently used
expressions are "Thanks for the correction", "I stand corrected", and
"IIRC". I seriously doubt standing up for what is the correct and shared
view by most people in the group is going to change their view. But
heck, you an Michael have done a pretty good job of rewriting history so
far so who knows?

Rick

...while here in comp.sys.apple2, most of us don't know you from Adam.
Whatever you might happen to know on any given topic is largely nullified by
your arrogant, condescending attitude. Maybe Atari users find that
acceptable; I would hope not, but since I haven't used one of those since
1986, I wouldn't know. I think I'm fairly safe in saying it won't get you
far at all among Apple II users.

Maybe this opinion, like the others further up-thread, is also "of no
consequence" to you. The reverse is rapidly becoming true, and you have
only yourself to blame.

(WTF is it with other 8-bitters coming in here and trash-talking everybody
and everything in sight lately? First it was the Aztec C vs. cc65 thread
instigated by a Commodore user; now it's this. I would've thought the Apple
vs. Atari vs. Commodore "wars" were long since ended, and not in anyone's
favor. I could make reference to my posting history in comp.sys.apple2, but
I have better things to do with my time than to get sucked into a Usenet
d*ck-size contest.)

I'm starting to see other peoples' point about participating in an unmoderated newsgroup. Of course most of the web pages and moderated newsgroups I have seen usually have a clique in place with 4 or 5 butt buddies you can't disagree with or correct. They end up being just as frustrating.

Perhaps I shouldn't be this insecure but I actually went down to my basement to check the copyright dates on both my Atari 800/400 technical reference manual and De Re Atari. I realize probably half the group owns these and they would have pointed out I was wrong had I been.

While I do have a pretty good memory, I mean I remembered the Harris post to the newsgroup from 15 years ago, there are a few shorts in there. For some reason I keep wanting to call John Harris, James Harris. I figure it is combining John with James Hague. I even went to the trouble of looking up details about that cold fusion fiasco to be sure I had some pertinent details right. While I couldn't remember the names involved<Ponds Fleischman?> I did remember correctly that within something like 3 days of publication protection a MIT faculty member<?> filed a patent on it. I also seem to recall a different MIT administrator about a month later apologizing for it after the fact. I think that had more to do with cold fusion not panning out then the patent filing. If it cold fusion had panned out and MIT got billions of dollars in royalties, that guy would be a department head by now.

That's just the way things worked. The old Elisha Grey being beat to the patent office by Bell thing which I have heard is part myth. Right, why didn't they just publish it to establish priority!<grin>

But I grow tired. Bill Wilkinson countered the same 'secret' argument years ago too. You would think that someone who helped write the OS<FP routines anyway>, Atari BASIC, and the books "Inside Atari Basic" and "Inside Atari DOS" would carry more weight. I think he may have made these comments on a BBS back in the 80s so it may not turn up on google.

Which brings me to the punch line: I'm sure much to everyones' relief I don't subscribe to the appleII group and have proceeded to add apple to my newsgroup filters. I know this will mean if someone develops an Atari controlled apple peeler or says their Atari is 'the apple of my eye' it

will not be heard by myself. If someone wants to ask me programming my Atari under the apple tree in my yard, I am sorry won't see it. No great loss. Just wasting to much time arguing with idiots instead of doing something fun.

Rick

Thomas Richter <thor@math.tu-berlin.de> wrote in news:

> I afraid so. The c64 had no graphic support in its rather limited basic.

That's because it used a BASIC originally written for the PET, a machine with no sound or actual graphics. To draw an orange line (like in your example) on the C64, you'd have to do this:

```
5 ba=8192:poke53272,peek(53272)or8
10 poke53265,peek(53265)or32
20 fori=batoba+7999:pokei,0:next
30 fori=1024to2023:pokei,128:next
40 pokeba,128:pokeba+1,64
50 pokeba+2,32:pokeba+3,16
60 end
```

This just draws a few pixels in the upper left corner of the screen, but
should give you an idea of what's involved.

Seems like the C=64 has a fixed screen memory,
and you're poking into that memory.
That can be done on the Atari. The Atari screen
memory can be moved, as can the display list,
which is a small program for the graphics chip
to execute.

> So presumably it was worth spending money on the drives
No idea if it was true or not but I was told back then that those big PET double
floppies in the steel case could copy anything as they did a bit level copy of the
source disk no matter what format/type it was and thus managed things even Happy
drives failed at.

You can set the frame buffer of the C64 to various locations.
Page flipping is possible, of course.

> That can be done on the Atari. The Atari screen
> memory can be moved, as can the display list,
> which is a small program for the graphics chip
> to execute.

That's right - and funny things are possible with these display
lists: The start of the frame buffer can be set for each line -
organizing the frame buffer "backwards" in memory, a different
video mode for each line, a horizontal display interrupt on each
line (if one can spare the CPU cycles ;-) and so on.
It's apparently even possible to change the video mode mid-line!

The power of ANTIC (the video processor) was astonishing for
its time.

But the C64 has one single feature that is much more practical
for many applications:
The 1KB large "Color RAM" area which allows for two independent
colors for each character block (40x25 matrix) - even in high
res mode.
This not only gives you colored text but a good compromise
between colors and resolution whereas the Atari either can't
utilize that many colors on a single line or has a lower resolution.

bye
Marcus

Nope. The video memory on the C64 can be moved all over the place. In this
example, the video bank is at $0000-$3FFF (the default setting). We're
using bitmap graphics here, where the pixel data resides at $2000-$3FFF and

the color data at $0400-$07E7.

Greetings,

I need a working 410 program recorder for
the Atari 400/800/XL/XE.
The one I have is bad and I need to extract some
info from some Cassette Tapes.

If you happen to have one not needed, I will
pay shipping for it and maybe a little cash or
a 8-bit program or something.

E-mail me with your info
at: phantomm@suddenlink.net

Thanks,

.

Of course, Rick won't see this reply, since he's in the corner with his
fingers in his ears going "La, la, la..." (that's what a killfile is,
after all), but...

US patent law in this area (publication by author as a bar to
application) has *not* changed.

I frequently used this provision of law to determine what I could
say to customers and when I could say it--with advice of counsel,
of course. It also determined when we filed international applications,
since *their* rules are "no window".

I used to subscribe to comp.sys.atari.8bit, until I was basically
jumped by them just for voicing an opinion.
I much prefer the Apple crowd, even though the computer that shares my
desktop with my Mac is a TI-99.

This group has been a source of inspiration. There is a lot going on
here. And less in-fighting. I also enjoy hanging out on comp.sys.cbm,
even though there is more in-fighting there.

MSXers seem to share some of the less desirable traits with the
Atarians as well...

I'm proud to announce version 2.12.0 of cc65. cc65 is a complete cross development package for 65(C)02 systems, including a powerful macro assembler, a C compiler, linker, librarian and several other tools.

cc65 has C and runtime library support for many of the old 6502 machines, including

- The Commodore VIC20, C16/C116, C64, C128, C116, Plus/4, 510 (aka P500), the 600/700 family and newer PET machines (not 2001).

- The Apple][and successors.

- The Atari 8 bit machines.

- GEOS for the C64 and C128.

- The Nintendo Entertainment System (NES).

- The Supervision console.

- The Oric Atmos.

- The Lynx Console.

The libraries are fairly portable, so creating a version for other 6502s shouldn't be too much work.

This is mostly a bugfix release, with larger changes in just a few places. The latter is especially true for the Apple][libraries, which have undergone major changes done by Oliver Schmidt.

As usual I will provide the complete sources and several binary packages, including RPMs for RedHat Enterprise Linux 5. Please note that there are separate RPMs for the compiler proper, the docs, and the target specific libraries. To develop for one of the predefined target systems you need the compiler RPM package *and* one of the target machine packages. Be sure to download the documentation package if you're new to cc65.

Precompiled binaries for DOS, OS/2 and Windows are available in ZIP archives. As with the RPM packages, you need the package for the development system (Windows or whatever.) *and* one or more of the target machine packages, plus optionally the doc package.

There's also a windows installer package. The target specific libraries and header files are selectable as components from within the installer dialogue.

All packages are available from the MU software FTP server:

ftp://ftp.musoftware.de/pub/uz/cc65/

More information on cc65 can be found on the cc65 web page at

http://www.cc65.org/

There is also a mailing list for discussing cc65 related issues (programming, suggestions, bugs, ...). See

http://www.cc65.org/#List

for information on how to subscribe to this list.

While I'm the main developer of cc65, it is actually a joint effort. I would like to thank the target library developers, all the people on the cc65 mailing list, all those sending suggestions and feedback, and even those bugging me for a new stable release:-) The CREDITS file is probably incomplete, but you know who you are.

Thank you!

Uz

Funny that you'd bring up the TI-99/4A, as discussion around those (mostly
on a Yahoo mailing list, not so much on Usenet) also tends to stay fairly
civil IME.

(One of those was my first computer. With only 16K, no printer, no disk,
and an expensive upgrade path to get to those, it was sidelined after a
couple of years by a better-equipped IIe. I no longer have my original
99/4A, but I picked one up cheap on eBay a few years ago, along with a PEB
with a floppy drive, serial port, and 32K RAM expansion. It's set up on one
desk, and my stealth IIGS (upgraded from the aforementioned IIe) is set up
next to it on another desk.)

=46rom what I can tell by reading old c.s.a2 posts, the Apple][crowd
had its period of in-fighting in the late 90's in which several high
profile (and somewhat controversial) figures left the Apple][scene
forever.

I would like to think that those who weathered the storm in the 90's,
in addition to those returning (or joining) the Apple][community,
are much more mature and less prone to the kinds of erratic behaviour
exhibited by the individuals in question, and that we can have
discussions that don't dissolve into purile p1ssing contests. ;-)

As Dirty Harry once said, "Opinions are like @ssholes; everybody's got
one."

BTW, please pardon my purile language. ;-)

Cheers,
Mike

The focus here is incredible. csa2 is way too concerned about creating, discovering, tinkering, and exchanging information to be in the same galaxy as caring about childish system wars or other Internet drama - in the best tradition of the old regional Apple II user groups. :) It is, appropriately enough, the polar opposite of a typical Mac forum.

Umm - yes, you are absolutely right!

I joined a Mac forum back when I got my mini a year ago, and left
frustrated a few months later. A lot of that same "my computer is
better than yours" between Mac and PC types drove me away...

oh not talking about 3.5 drive. talking about High Density 5.25 drive that
use Quad Density, 80 tracks and 9 sectors (IBM formatted), can format 720K
instead of 360K. It is very similar as 3.5 drive DSDD.

5.25 drive DSQD = 3.5 drive DSDD

Thanks!
Jack

I've just listed a number of issues of the vintage video game &
computer magazines "Video Games" & "Electronic Games". These issues
date back to the period 1982 - 1984.

Articles cover most popular console & computer systems of the time as
well as pinball & arcade machines.

The link to the auction listing follows. http://tinyurl.com/yvkmo5

I'll post worldwide and will be happy to consolidate postage for
multiple purchases.

If you have any questions contact me via the link on the listings
page.

I'll send it again. I checked the .zip file against the original and on
at800winplus, it booted and gave a directory.
So the .zip is good, I'll send it again.

Been a while, but I remember that. What do you think of it? I remember it was
one of the most toated pinball games for the Atari 8-bit computer.

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

The Atari computer intellectual property rights are currently owned by Atari Interactive, which is managed by today's Atari, Inc. Both of these are divisions of Infogrames Entertainment.

You're cordially invited to join the festivities this Month of March! Were
celebrating my Birthday! Your Gifts are appreciated! It's Christmas and my
Birthday rolled into one! Bless me, with your business as I raise Money to
buyout yet another Atari Dealer's goods! Also, I've traded away my Jaguar
stock to Lance @Video 61! In exchange Im getting lots of 8 BIT & ST GAMES/
SOFTWARE! All 25% off in my Catalogs! Goto Lance for your Jaguar needs!

ORDER OVER $50 GETS 25% OFF ALL ATARI USED & NEW GAMES/SOFTWARE, HARDWARE,
BOOKS & ACCESSORIES! ORDERS OVER $100 GETS A BRAND NEW FREE GAME & STILL
GETS 25% OFF ALL CLASSIC ATARI 8 BIT & ATARI ST COMPUTER LINES! GOT ATARI?
Most items I have 1, 2 or too few of. Get them While they last! Come for
the Sales, Stay for the Service! E-Mail BenSells@Atari.org GET FREE ATARI
CATALOGS AT http://BensCatalogs.Atari.org or Call Ben 24/7 @(503)256-9974!

http://BensCatalogs.Atari.org	FREE ATARI CATALOGS!
http://www.aracnet.com/~atari/adoption.htm	Atari Adoption Agency!
http://www.aracnet.com/~atari/birthday.htm	Ben's Birthday Bash!
http://www.aracnet.com/~atari/wantlist.htm	What Ben Wants!

I've got a fast turnaround rate. Usually, Once I receive payment your
order goes out the same day. Customers love the speedy service! I have

lots of Atari SoftWare & Books. Which I can send by Media Mail Rate!

Please Direct all Replies Through E-Mail to: BenSells@Atari.org or
Atari@aracnet.com. If you can't reach me, see my info at the Bottom!

Atari Jaguar, 8 Bit and ST Games/Software, Hardware/Accessories & References/
Books. FREE Catalogs on Ben's Domain at http://BensCatalogs.Atari.org or at
http://BenSells.Atari.org Catalogs can be attached to,Requested by & Received
Through E-Mail at Atari@aracnet.com or BenSells@Atari.org and Please Specify
Atari 8 Bit, ST, Jaguar and/or all 3! Or Call Ben anytime at (503)256-9974!!!

I have the disk image of the terminal program called IceT800 (this is
the one that will run on a standard Atari 800XL not the 128K version.)
When I load the program on my 800 XL it gives some instructions on how
to get the program usable the 1st time it is run using the Atari DOS
Append command but I have had no luck getting this to work. I was
wondering if anyone has a copy of the disk image ready to run that I
could download or have e-mailed to me.

My goal is to find a terminal program that has 80 Column display as I
am trying to telnet to bbs's using APE. Bobterm works great but trying
to read the BBS on 40 Columns is not going well and I saw no way to
kick Bobterm into 80 Col mode

Any recommendations on a good terminal program for use on an 800XL
with the 80 Column mode option? Any terminal programs with ANSI
display support would be even better

Thank you

You shouldn't actually have to Append, I don't think. I think you should
be able to first load the R: handler into memory, then load Ice-T.

Which R: handler you load depends on what modem you're working with. Or
more specifically, how the modem is attached to the computer. (joystick
port, via 850 interface, direct SIO connection)

You mention you're going through APE. I knew that was possible, but I
don't know what that means for an R: handler. My guess would be that APE
can act like an 850 interface, and load an R: handler on startup. Anyone?

Right, BobTerm is 40 columns (unless used on an XEP80).

> Any recommendations on a good terminal program for use on an 800XL

Ice-T was my favorite, though the 128K was a good step better than the
last 48K version.

For ANSI, you could try FlickerTerm 80 or Term 80. FlickerTerm worked
well, but I couldn't stand the readability (not the flickering, it was
just tough to read!). I never tried Term 80, but it sounds promising.

-Michael

If I remember correctly, Bobterm's 80 column mode was meant to work with
the Atari 80 column adapter. There were other terminal programs that
produced an 80 column display in Graphics 8 mode (4-pixel-wide
characters). I think there was an 80 column Kermit.

I have that and the other one with the bomber. Both work fine and are fun to
play. It is amazing to see just how good with grahics the Atari 8-bit
computers are.

Yes, and there was also an 80 column omnicom (which I used to access
a university computer).

Does anyone out there have an Alien Group Voice Box II that they might be
willing to part with for the right price? If so, please drop me an email.

Thanks.

Jason Harmon

Good Game, took me a little while getting used to using both joysticks to
play the game. Graphics aren't bad for it either!

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

The Atari computer intellectual property rights are currently owned by Atari Interactive, which is managed by today's Atari, Inc. Both of these are divisions of Infogrames Entertainment.

Hi,

I'm selling some surplus gear on eBay, and some programming books. Take a
look:
http://search.ebay.com/_W0QQsassZs_jeffers

Does anyone out there have definitions for Trigonometric functions for
Action!? The floating point function wrappers provided with the Action
toolkit don't provide them and I since BASIC is not available when running
Action!, the routines built into BASIC's ROM are not available.

Thanks.

You may want to try a work around. Add trig tables as byte or card
arrays if you just need it for screen output. Been a long time for math
too but the trig functions repeat themselves so you don't need all 360
for 360 degrees. Something like they repeat every 180 degrees<???> and
can be caculated from the first 45 degree tables? So *IF* you use degree
as your smallest division and byte as your scale you get 1/360 and 1/64k
or .3% and .0015% accuracy from a 180 card table. This is as ~good as
the screen output of the Atari screen so you shouldn't have any plotting
errors.

What I mean is

Sin 1 degree = .0175 so you store it as 175

Sin 2 degrees = .0349 so you store it as 359
...
Sin 45 degrees = .7071 so you store it as 7071

For doing stuff like drawing circles this works fine and is pretty fast.

Rick

Thanks.

I'll give that a try. I wonder if this uses more or less RAM that a
mathematical implementation. Will have to look and see what is in the BASIC
ROM.

Hello Atari 8bit people from a lifetime Commodore 8bit and Amiga
fan:-) I figured you might be interested in new the Competition Pro
joysticks I have for sale.

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=180221729871

These are genuine new boxed Competition Pro joysticks from new
production, not old stock.

Enjoy:-)

As you know, all programming involves trade-offs. Typically the trade-
off between look-up tables and the mathematical algorithm is speed/size.
On average, look-ups are very fast but use more RAM.

FWIW: Probably uses 4x the memory at 10x faster. Reason I believe this
is amoung other factors you would have to go to Atari floating point
format to get accuracy to 6 byte floats. Just giving the CORDIC method a
cursitory glance, you are still going to need a ~100 element table and
the other method requires factorials and powers.

I did recall just a bit about look up tables I constructed. Cos is just
Sin +90 degrees with a sign change. That is, Cos 30 degrees = |Sin 120
degrees|.

So I used of table of 180 elements to get both the sin and cos rather
then two 90 element tables. I seem to recall I used BASIC and printed to
a flie after scaling the numbers. i.e. multiplied the result by ~32000
to get the numbers int sized and printed those numbers to a file that I
loaded into Action!

Thinking about it, I should have been able to get it down to 90 elements
  i.e. sin 1 degrees = cos of 89 degrees but I quit as soon as I got
something that worked. Once again, it was just for drawing to the Atari
320x192 screen so the point 120x66 was just as good as 120.1212x66.045
in my use.

Rick

     Ooo, another Star Trek game. Makes me want to get an
Atari. (Well, when I got a TI-99, I had to get a Star Trek:
Strategic Operations Simulator cart for it.) :-)

Does anyone out there have an ATARI 1200XL COMPUTER for either sale for a reasonable pice, or can make a trade for anything on my website? A donation would be greatly appreciated!

The computer will be used for R&D for pinouts, interfacing, cabling, and hardware mods in the future to add to my product lines of products and services to the community.

Please let me know if you can help out in this area!

Thanks and have a great day!

Hiya, Charles.
You might want to check the comp.sys.atari.8bit FAQ.
It has a lot of technical details on pinouts, etc.
The 1200XL is probably one of the harder to find for sale.
You might want to check ebaY. Good luck.

The accuracy and resolution you require for your application will
determine the complexity of either the lookup table or algorithm.

I would recommend a few sources:
1. The Atari Basic Source code.
2. Look at some embedded controller websites - these people are often
needing to implement fast and/or accurate trig functions on processors
with very limited resources.
3. Study either power series expansion or CORDIC. HP Journal
articles in 1972 have had details. Also see the original paper by
Volder.

I hope this helps a bit.

Regards,
TomCee

Greetings everyone!

Here is the lucky and the proud winner of the February prize at The
DarkForce! BBS:

February 2008
1. ST Magazine - Gemini8 wins the free 3 mag. subscription

Congratulations to our winner!

Also, here is the prize for March 2008:

1. ST Magazine - some lucky Atari caller will win a free 3 magazine
subscription.

Congratulations to our winner, and good luck to this months callers!

 :)

Hi,

I think you are talking about a 5.25 disk and drive that formats with 512 byte
sectors. A task almost impossible on Atari 8 bits yet.

Rick

Go to www.vintagetechnology.co.uk to download latest issue (April
'08). Only =A30.79p / $1.60 for a 40+ page magazine devoted to the
collection, preservation and history of all aspects of digital and
electronics technology, including computers, arcade games,
calculators, led watches, mobile phones, appliances, gadgets, robots,
radio, audio and tv.

This issue features:

Vintage VHS video recorders - why we love them
The brave new world of videotex
Whatever happened to the teasmade?
Sega Master System - worthy rival to the NES
Sinclair ZX80 - 1st computer for under =A3100
Hard disks - humble, but collectible
Review of retro games for the Xbox & Playstsation
1970s Sanyo calculators
Vintage hi-fi headphones
1980s novelty radios
Interview with Dave Johnson - ColecoVision programmer
Lets party retro-tech style
Imagination Machine memories

Plus sections on museums & collections, latest events & news and book
review.

VTM aims to explore the legacy of recent past technology, explore new
'electronica' which could become or already is collectible, be an
enjoyable resource for collectors & historians and celebrate the
history and personalities surrounding this subject.

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

The Atari computer intellectual property rights are currently owned by Atari Interactive, which is managed by today's Atari, Inc. Both of these are divisions of Infogrames Entertainment.

NEWSGROUP BACKGROUND

comp.sys.atari.8bit was created in November 1986 (as part of the Great Renaming) as a direct replacement for: net.micro.atari8

comp.sys.atari.8bit is unmoderated, and has no formal newsgroup charter.

The comp.* hierarchy of Usenet newsgroups is managed by the Big-8 Management Board: http://www.big-8.org/

RELATED USENET NEWSGROUPS

alt.binaries.comp.atari8bit
Programs for Atari's 6502-based orphans.

comp.sys.atari.advocacy

Attacking and defending Atari computers.

comp.sys.atari.announce
Atari related hard/software announcements. (Moderated)
Moderator: Kevin Savetz
comp.sys.atari.announce web page: http://www.atariarchives.org/csaa/

comp.sys.atari.programmer
Programming on the Atari computer.

Let's not forget Clay Halliwell's Flickerterm. I preferred Ice-T over
Flickerterm (again, Sorry Clay.) but have seen it work very well on a
couple of monitors. Not for those who are prone to seizures.

#5, #6 and some teens ones just went on ebaY. 9 mags for $15 + ship.
It was in Vancouver, B.C., so ship for me would have been $23.
A little steep for me.

Someone using my XL Search site pointed out that ftp.spudster is down,
and asked if there was a mirror. Anyone know? Thx!

Brian,
You can download A.N.A.L.O.G. issue #5 at this website:

http://www.cyberroach.com/analog/

 I don't think much is being done these days on the incomplete
magazines here, but it lists #5 as being complete.

Keith

              Welcome to the comp.sys.atari.8bit newsgroup!

                  Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family
of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE,
130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

The Atari computer intellectual property rights are currently owned by Atari Interactive, which is managed by today's Atari, Inc. Both of these are divisions of Infogrames Entertainment.

NEWSGROUP BACKGROUND
comp.sys.atari.8bit was created in November 1986 (as part of the Great Renaming) as a direct replacement for: net.micro.atari8

comp.sys.atari.8bit is unmoderated, and has no formal newsgroup charter.

The comp.* hierarchy of Usenet newsgroups is managed by the Big-8 Management Board: http://www.big-8.org/

RELATED USENET NEWSGROUPS
  alt.binaries.comp.atari8bit
    Programs for Atari's 6502-based orphans.

  comp.sys.atari.advocacy
    Attacking and defending Atari computers.

  comp.sys.atari.announce
    Atari related hard/software announcements. (Moderated)
    Moderator: Kevin Savetz
    comp.sys.atari.announce web page: http://www.atariarchives.org/csaa/

  comp.sys.atari.programmer
    Programming on the Atari computer.

Hello,

I'm trying to run an old BASIC program on Atari800Win Plus 4.0. The
program has a CAS (cassette) extension although the program is no
longer actually on a cassette. I've done the following commands, but
can't get the program to load and run. What am I doing wrong?

1. Ran Atari800Win Plus 4.0
2. Loaded ROMs (everything works fine)
3. Pressed F5 to get to the BASIC screen
4. Fron the FILE menu, I selected ATTACH TAPE. I then located the
program file and double
   click it. Atari800Win then returns me to the BASIC screen, but
nothing happens.
   The cursor appears on the screen and that is all.

Also, how can I get a printed copy of the program from Atari800Win?

Any help is greatly appreciated!

Thanks!

Mark

You might need to give a "CLOAD" command in Basic.

Atari800Win CAS files are special binary files,
I don't think it will load a CSAVED or SAVE "C:"
image. You have to have the SIO patch, at least
on At800win 3.1 I have.
If you aren't notified when you 'attach' the cas

file, then it is recognized by At800wp. At800wp
will say 'don't recognize the format' if it isn't a compatible
cas file. So, I suspect you have a binary cas file, and
it isn't BASIC. If that is the case, you engage the SIO
patch in the options menu, hit ALT B and tell it to
load the file. Then hold SHIFT and F5 for a cold
boot (no disk in D1:) and hold F4 same time.
Then hit ENTER and wait for a while, it should load.

Where did you get this cas file? Is it something you made,
or something you got from an archive. I ask, because
most .cas files in today's archives are the special At800WP format.
Can you look at the cas file with a, say, notepad, or hex
editor on the PC? If so, does it look like a BASIC load file?
As for printing the listing out, I think there are such
utilities for printing Atari files to PC printer.

Late to see this post but it gave me a good chuckle. Our love for Atari is
now viewed as a sick perversion like hiding our weed or our porn.
LOLLLLLLL.

Thanks for all your help. I got it to work! I had all the right
commands, I just wasn't using them properly.
Here is what I did to get the program to run.

1. Press F5 for BASIC screen.
2. Select "FILE" and then "Attach Tape". Select your program.
3. Type "Cload" on the BASIC screen
4. WAIT. It takes time to load the program. This was my main error. I
didn't wait long enough.
5. When the words "Ready" appear with the cursor, you're done!
6. Type "RUN" and you're done!

Now, how do I print the BASIC listing? Any help would be greatly
appreciated!

Thanks!

Mark

You can probably get a listing like Roy Biv says, "LIST P:".
However, it won't print inverse or special characters.
Printing ATASCII listings was a problem until the
G: device handler came. It allowed listing ATASCII
to a STAR dot matrix printer.
There may be some modern utility that will do it.
However, you have a problem, I think, that it is
on tape, and I don't know how you could extract it
to a disk file, no DOS is loaded.
There are some carts, like maybe the SpartaX
cart, that might allow a mixture of tape and disk,

but, of course, you can't put SpartaX as far as I know.

And err, you do not even need two joysticks. use one joystick and a)
left for the left flipper and b) fire button for the right flipper. you
can also use a pair of paddles and their firebuttons (or use a Multipad
or Powerpad by Portronic and press left+right direction buttons
simultan. to activate both flippers)...   -Andreas Koch.

Well, for a disk based A8 magazine: Abbuc magazine ! Read more about
Abbuc and its (german) magazine here: www.abbuc.de

For an online magazine covering retro games, RGCD is also a good adress
www.rgcd.co.uk

There is also the czech FLOP magazine for the A8 which arrives once a
year (alas, all texts are in czech language, but the software on the
magazine is great)... http://raster.infos.cz/atari/flop/homepage.htm

hi

just recently discovered the xformer8 emulator, seems to
emulate atari basic very well. only thing is, its been so long since
i've used it i've forgotten how to 'print', (no, i don't mean the
print command, i mean print as in sending info to the printer)

does anyone know how to get the emulator to recognize my printer?
(using a pc running windows xp), and what commands i would type in to
say, print out a 'list' of a program?

I don't know if xformer does printer printing.
I believe Atari800winplus does do some straightforward
printer printing (LPRINT and DOS COPY XXX.XXX
P:)
Maybe you need change emulators.
I don't belive there is any emulator that emulates
ATASCI special characters, like the old G: device
did to Star printers.

I have Hyper XF rom that was created by Stefan Dorndorf/Germany for XF551,
like XF35. I see boot from the rom without the inserted disk.

Mode A B C D M F S X ...

Can you describe the different modes?

Thanks!
Jack

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family
of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE,
130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by
Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of
Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from
1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

The Atari computer intellectual property rights are currently owned by
Atari Interactive, which is managed by today's Atari, Inc. Both of these
are divisions of Infogrames Entertainment.

Go to www.vintagetechnology.co.uk to download latest issue (March
'08). Only =A30.79p / $1.60 for a 40+ page magazine devoted to the
collection, preservation and history of all aspects of digital and
electronics technology, including computers, arcade games,
calculators, led watches, mobile phones, appliances, gadgets, robots,
radio, audio and tv.

This issue features:

GO Compuserve!
Back when mice ran on wheels
I love my Tandy CoCo
ColeoVision - the arcade experience brought to the home
Mattel handheld games
Sinclair calculators - elegant little number crunchers
Seiko TV-Watch and its legacy
Early Technics receivers
The first one-way teletext services
Don Wetzel, co-patentee of the automatic teller machine
70s & 80s answering machines

When compulsive hoarding gets out of hand
Adjusting CRT colour monitors
The Atari user shows

Plus sections on museums & collections, latest events & news and book review.

You can also get the printed version for =A31.99 and it is now possible to get single printed issues of current editions.

VTM aims to explore the legacy of recent past technology, explore new 'electronica' which could become or already is collectible, be an enjoyable resource for collectors & historians and celebrate the history and personalities surrounding this subject.

Hi

I've rewritten Mike Mayfield's star trek program in atari basic.

anyone wishes to play the game, i've uploaded it to rapidshare...

I couldn't get the program. It was a .rar file and gave
me a xf2000 folder, with maybe a .txt file in it.

winrar is a good way to package a number of files, its an easy program

to get (unregistered version will open it for you)

the name of the folder is xf2000 which is the name of the emulator
xformer8 comes it, the txt file is the instructions

Xref: g2news1.google.com comp.sys.atari.8bit:9080

My goal is to take .ATR images and have them written to real Atari
disks via my 800 XL. Here is what I am working with.

I have an Atari 800 XL, 1050 Disk Drive, 850 Interface, Null Modem
Cable connected to the 850 Interface and to my Windows XP computer's
serial port and a copy of both Atari Dos 3 and Smartdos 6.1 for
software on the Atari 800 XL. I also have Atari 1030 Modem but it's
not hooked up.

I believe my biggest problem is that I do not have a terminal program
on the Atari side of things. I tried the APE software package but it
appears it wants to work via an SIO2PC type cable and not a direct
serial port interface.

Is there a program out there that will allow me to transfer disk
images from the Windows system to the Atari and then write disk images
onto the 1050 drive without having software initially on the Atari
side of things? I know that for the Amiga and Apple II series of

computers I found programs that did the same thing I want to do here
(For both of these platforms the software did an initial bootstrap off
the serial port and created a program disk on the Apple & Amiga for
use to transfer disk images)

Hope this all makes sense. I did read the different FAQ's and Googled
many different search terms but am now at the point where I felt I
could ask for help.

I know I can buy software and an SIO2PC cable but money is tight and I
have plenty of blank floppy disks to use and really prefer to have my
collections as "vintage" as possible.

Thank you

I'll assume building your own SIO2PC cable is not an option either.
Parts are only ~$5 if you use the 1489 version and just have to buy a
DB9 connector and cut up an Atari cable.

More info then you really need perhaps but even going the route you want
you will have to build an Atari 850 to IBM null modem cable. It's a non
standard item that will end up costing you as much as building an SIO2PC
interface. See what I mean? You are still going to be buying a part or
two and last time I checked the cables and hoods will cost about the

same for less functionality.

But yes, you can do it exactly as you described but it is just a bit complicated. Easiest way would be to ask here if someone would send you a disk with Disk Communicator and Bobterm 850 on it and an Atari to IBM null modem cable.

For a real retro experience w/o getting a disk, you could use Miniterm which you should be able to find on the net somewhere. You still need the cable to connect from the 850 to the IBM of course. Miniterm is just a ~10 line BASIC program that allows you to capture text that is sent from another computer. Since you are booting the 1050 disk drive you have to load the handler for it. It will either be on the one of the disks you have now or like Miniterm, you can type in a short program that will load the 850's built in handler after DOS loads.

From there you have two approaches to getting stuff to the Atari.

1) Get a terminal program written in BASIC that has Xmodem transfer from the IBM using Miniterm. You may have problems with special characters and Atari's odd EOL but it should work. You may even have to load an emulator on the IBM to LIST a terminal program so it isn't tokenized, just printable characters. Procedure would be load Miniterm on the Atari, put it in capture mode, send text file from the IBM using Hyperterm which is on just about everything Clone. Once you have the program on the Atari you can connect just like hooking up to a BBS.

2) After the Miniterm stage you can alternately use uuencode which converts binary files to text. You would capture a BASIC UUE decoder from the IBM with miniterm just like the terminal program. Once on the Atari you would uuencode files, send them to the Atari via Miniterm, convert them back into binaries on the Atari.

Honestly, the first file I would probably transfer using this method would be Bobterm 850 so I wouldn't have to do all the jerking around with UUE. After I got Bobterm I would get disk com and everything with Hyperterm transfers would be simple from there.

Rick

I have a standard RS232 Cable with a Null Modem adapter on it which is
what I use to transfer data from my Windows box to other vintage
systems This is null modem cable not usable with the Atari 850
interface? Sorry if I misunderstood

Thank you for all the info it helps get me going in the right
direction. I would not mind spending money for a pre-built SIO2PC type
cable but the only ones I have seen are on e-bay and are $30 - $50 or
more depending on if I would want a USB or Printer interface cable. I
will look into building my own and see if I have the skills needed to
solder and create one.

Thank you again for the pointers.

I am a big Star Trek fan and would love to play your game, but I'm
tired of trying to get it to work. Your text file instructions got me
nowhere.You need to find a better way to make the game accessible to
the end user (me). Let me know when you've done that. I'm anxious to
play.

Slightly OT, but winrar will break Windows XP's built in compression
(ie right click, send to compressed folder). Even when removed you
will always be prompted that XP's compression is not the default and
there is no fix other than reinstall.

Correct, a IBM type serial cable will not work with
the 850.

OK, so you need an Atari serial cable. You need
Atari communication software (Bobterm). And
finally, you need PC comm. software (Hyperterm?).
Old DOS program like PROCOMM would work
on a non-XP/Vista machine. I say this because
XP doesn't allow some DOS applications.
I'm surprised you have a XP with serial port,
almost everything is USB now.

The Atari serial cable will be hard to find, and cost
some. I really suggest APE stuff, APE for DOS
is shareware, crippled for what you want to do
(PC to Atari transfers). You could go build your
own SIO2PC 1489, it isn't real hard, but I don't
recall where the instructions are.
An APE serial interface with terminals (you have
to cut a SIO cable) is $24.95. And APE DOS
registration is $39.99. I'm not sure if APE DOS
will work on an XP box.
Hmm... cheapest route, assuming you can get
a Atari serial cable, or rig your own by swapping
some wires on your PC one (see the Atari8 FAQ).
Then the Bobterm and Procomm.
I believe the 850 R: handler will boot with SmartDOS,
forget DOS 3. Better to have the Bobterm R: handler.

Good luck and have fun.

To: Bill H - Sorry you have such issues with winrar, can't help you
there

To: Personable85:

1) download folder to desktop
2) click on 'extract to', then 'ok'
3) click on folder xf2000
4) click on folder inside, also called xf2000
5) click on xformer8.exe, this starts the emulator
6) on splash screen go to 'options', then 'disk properties'
7) double click on D2 line (second line down), on 'select disk image'
page, double click on dos26.xfd, hit 'close'
8) hit 'continue' to start emulator
9) type in EXACTLY....LOAD "D2:E"
10) type RUN to start game
if this doesn't work, try dragging the inner folder xf2000 to the
desktop so it isn't nested, try again to target dos26 file in d2 line

Thanks. I managed to get it to work.

I've always loved this text based Star Trek game. I always seem to

come back to it despite all the modern stuff. There's something
magical in its simplicity.

I hate to be the bearer of bad news, but the version of the Star Trek
game you created already exists. Just check Atarimania.com and search
under Star Trek. One of my future projects is to improve on the
original.

Thanks for keeping the game (and the Star Trek dream) alive!

Mark

You understood right except for the 'standard' thing. Atari came first
so it could be argued it is standard and everything else is non

standard. Truth is I used to have a book that was just tables of all the different RS232 implementations so there never really was a standard.

Your cable does make it a little simpler. When confronted with the same problem all I did was get 3 short pieces of solid copper core hook up wire and jumpered the connections. I think I had straight through gender changer at the time so I could push the wires into the sockets. The only wires you need to connect are TD<transmit data> and RD<recive data> and ground. The Atari uses pin 3, 4, and 5 respectively on its 9 pin connector, the IBM uses 3, 2, and 5 respectively. Pretty simple hook up, just wires straight accross for 3 and 5 and run from 2 to 4 on the third assuming your going to use your current null modem cable which probably already switches TD & RD internally.

Tip if you are trying to save a buck, more then once I have just used a DEAD IBM serial mouse cable for making serial connectons. They always have TD, RD, and Ground hooked up. Long as you get one that doesn't have an internal break in wire they are fine. If it was discarded because of a break, it usually occurs right at the mouse so you can just cut the cable a foot or two away.

The new cables are really a lot more club then you need for the distance. I mean Steve Tucker's actually performs like two cables in one, allowing you to do things like back up copy protected software to your IBM!

A simple design that would do everything you need
http://www.wolfpup.net/atarimods/

Clarence got a little carried away with adding options. If you are using a Windows based computer just hardwire the 1489 version for DSR and use APE for Windows. The DSR version is a little more responsive under Windows then the RI verions. If you have a fast computer you can probably get away with the RI version and APE has the option to use it.

If you are going to use a DOS based computer, then the RI wired one will work with both APE for DOS and Nick Kennedy's SIO2PC.

Rick

MyDOS 4.53 or SpartaDOS 3.2g boots up in Atari 1050 as primary drive. I have secondary 3.5 drive with Hyper XF rom in XF551. I tried to format 3.5 double density disk but it shows the error 144. How do I format 720K in one partition?

I have high density 5.25 drive that allow 80 tracks but we do not use 1.2MB floppy disk. Can the drive format 5.25 double density disk to 720K ?

Where do I find Hypmode.com and Hyper XF tool disk?

Thanks!
Jack

Back up and running folks. I finally got another Lantronix box in. They no
longer make the UDS10, so I had to get the 1100. Happily, I can report
that it seems to function indentically to the UDS10, at least as far as
working with my BBS goes.

Apologies for taking so long, and many thanks to all our patient callers.

The Fuji Lives! :)

Right. I think, if he has a 9 pin - 9 pin PC cable,
he would connect the 2 PC pin to the 4 pin, the
1 PC to 2 pin and the 4 PC to 1 pin to make
a 100% Atari 9/9 cable. Just the 2 PC to 4 make
the RCV line correct, and you have to remember that
you cross the XMT and RCV lines to make a null
modem cable.

Hmm... Perhaps the hyper XF will only do 720K 3.5", ie. double dens.
disk (only one corner hole, as opposed to 1.44meg with 2 holes.)
SpartaDOS 3.2g might do a 3.5" 720k floppy format, no partitions.
I bet SpartaX will.

I don't understand using 5.25" disks, I thought we were talking 3.5"
XF. You aren't going to get a 720K 5.25", it is either 360K
or 1.2 meg, I think. A 360K 5.25" is double density, same
as for use on stock XF551 (has hub ring), but XF551 double
sided is an unusual format, it can't be 'flipped'.

Regards, I'm a bit confused here.

Thank you for all the input. I went ahead and bought a SIO2PC adapter
& Cable from Atarimax on e-bay. Seems like it's well worth the money.

Hi Rick, Russg, all-

I had seen this thread was also posted here as well as at AtariAge, so
I thought I'd see what was happening over here.

It's been months (at least) since I have checked csa8. You guys ever
check in over at AA? A very active group, and no adverts or seriously
OT posts.

Best wishes,
Larry

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

The Atari computer intellectual property rights are currently owned by Atari Interactive, which is managed by today's Atari, Inc. Both of these are divisions of Infogrames Entertainment.

NEWSGROUP BACKGROUND
comp.sys.atari.8bit was created in November 1986 (as part of the Great Renaming) as a direct replacement for: net.micro.atari8

comp.sys.atari.8bit is unmoderated, and has no formal newsgroup charter.

The comp.* hierarchy of Usenet newsgroups is managed by the Big-8 Management Board: http://www.big-8.org/

RELATED USENET NEWSGROUPS
  alt.binaries.comp.atari8bit
    Programs for Atari's 6502-based orphans.

  comp.sys.atari.advocacy
    Attacking and defending Atari computers.

  comp.sys.atari.announce
    Atari related hard/software announcements. (Moderated)
    Moderator: Kevin Savetz
    comp.sys.atari.announce web page: http://www.atariarchives.org/csaa/

  comp.sys.atari.programmer
    Programming on the Atari computer.

The SSH would be handled via whatever device server is doing the serial
to ethernet translation. In this case, James mentions he uses a MSS10,
which I assume was supposed to be MSS100, and it handles accepting
serial connections and then telneting out via ethernet. Some device
servers support SSH as well as telnet, but I don't believe the MSS100 is
one of them (otherwise, mine is really due for a firmware upgrade :)),
so perhaps James will jump and clear that one up for us.

You can look at lantronix.com for info on their serial device servers.
Other viable options include the PortMaster line built by
Livingston/Lucent for use as ISP dial-up servers. And there are
others...

> In my opinion, the RND command don`t create real random numbers...

Random enough for most cases. Poly counters random generator would
create something like that too. If you need more randomness then
just use RND or POKEY directly as a seed for one of whole bunch
random generators you can find (use Google Luke :P). This is of course
about real machine - I dont know how it's emulated and you did not
say which emulator you're talking about ;). Anyway - best way to
avoid problems is to use any software driven random generator and
not to worry about RND, POKEY etc. You can even put generator code

(it will not be big) in RND$ and do USR(ADR(RND$),SEED) first time
and then subsequent USR(ADR(RND$)) will produce numbers. Of course
to use this in BASIC you still have to write 6502 code for RND$:)
or you can do generator in basic too (GOSUB called), but it will
be soooooooo slooooooow that it makes no sense in my opinion.

Hello:

Could/would someone please direct me to the latest available
information on the SIO protocol, frame and device assignments?
I've scanned the web and only found a lot of broken links!

Has anyone ever documented the 'boot up' sequence that the 8bits used
for downloading drivers on bootup (as in the 850 interface)

Is the OS Listing and Manual available on the web somehwere?
(I have an old hard copy somewhere - not accessible right now!)

Thanks,
TomCee

Hi! I just got this game called: Raster Blaster for the Atari 400/800/XL
etc. from someone on Ebay. It is the first computer pinball game where you
use both joysticks for the flippers. It was made by Bill Budge software
and released in: 1982. Has anyone heard of this game before?

Dane

AFAIK it was developed for the Apple II and is pretty much
the first realistic computer pinball game.
I don't know the Atari conversion but it should be close.

Bill Budge later wrote Pinball Construction Set which was
IIRC one of the first games with an editor available.

bye
Marcus

> there hasn't really been much of interest on ebay in the last little
> while either.

I don't believe the 8bit Atari has died. Given it's age, I'm certain
that 'interest' - as guaged by activity in this (and other) forum(s),
and ebay will goes through peaks and valleys. Perhaps we're in a
valley right now! I am an original owner, and my interest peaks and
wanes over the years/decades!

Given the Atari 8bit's place in history, I'm sure it will always have
a dedicated following.

A most interesting fact about these systems is that Atari actually
published the source code of the Operating System ROMS and Disk
Operating System.This was THE commented source code by the authors of
the OS - not some disassembled and reconstructed code.   This may be
overlooked, but this is/was a most powerful tool for developers and
interested users. I'm not sure who may still hold the rights to this
code and if it could be posted on the web. They had also published
the Hardware Manuals - fully documenting the Hardware with
descriptions and full schematics.

Atari was way ahead of its time; being 'Open Source' - perhaps before
the term (as we now know it) existed!

I think Apple may have been a bit ahead of Atari in this respect.
Apple actually published source code in their user manuals -- not for
the Macintosh, but for the old Apple II machines. Apple did
everything in their power to ensure that Apple users knew everything
they possibly could about the machines they had purchased. The Atari
8-bit machines that I had owned and continued to own, by contrast,

shipped with very little by way of technical information. ie. source
code for the ROMs and operating system.

Still, I found the old Atari 8-bit machines to be the most pleasureable
to use. Much more fun than the Commodore 64 for the simple fact that
they actually used a Disk Operating System that was booted from a
floppy disk. This made the Atari much more interesting in my view.
The old Apple machines I found to be really simplistic. As such they
were not much fun to use at all.

I will probably have at least one old Atari 8-bit computer for as long
as I live.

That's because, unlike Apple, Atari published the information seperately.

There were three hefty manuals: the hardware reference guide, OS reference guide and the OS listing. All available as a pack from your friendly Atari dealer. :-)

TTFN - Pete.

Not sure about 2.5, MyDos, etc; but DOS 2.0 came with
an AUTORUN.SYS which loaded the serial port driver
from the 850 and puts the R: device in the handler table
at boot time. The P: printer code was already in the OS
ROM along with E: S: K: and C:. Handlers can be added
or changed at any time up to the size limits of HATABS;
drivers are normally added at boot only because they
usually affect LOMEM.

I've got an Apple II owner's manual, not because I've ever owned an
Apple II, but because it is really cool how much technical info they
put in there. It was truely geared toward the hacker, where it is
evident that the Atari owner's manual was for the average consumer.

This link still looks good.
http://www.atariarchives.org/cfn/05/07/0001.php

Didn't check much beyond the table of contents but SIO protocol is listed.

Rick

Apple also published volumes of technical information separately from
the computers that they shipped.

I don't think it has been "documented", but it's easy enough.

First step is to read the boostrap parameters, that's command
'?' = $3f for device $50, 12 bytes. The 12 bytes are copied into
the SIO vector directly ($300 to $30c) and SIO is then called
again. This is supposed to provide bootstrap code at $500, which
is then launched like a "disk base" boot file at $506, which does
all the rest. A very minimal 850 bootstrap code looks like this
(taken from the atari++ built-in operating system):

```
;;; *** Boot850
;;; *** Boot the external 850 interface
;;; *** returns with carry set on error, other
;;; *** wise with carry clear.
        .global Boot850
.proc   Boot850
        ldx #12-1
lp:
        lda Init850Boot,x
        sta SIODeviceId,x
        dex
        bpl lp
        jsr SIOVector
        bmi fail
        ldx #12-1
lp2:
        lda BootSpace,x
        sta SIODeviceId,x
        dex
        bpl lp2
        jsr SIOVector           ; boot the handler
        bmi fail
        jmp BootSpace+6         ; run the boot code
Init850Boot:
        .byte $50,$01           ; RS232-handler, unit 1
        .byte '?',$40           ; get boot parameter, read
        .word BootSpace
        .byte $06,$00           ; timeout
        .word 12,0              ; size, aux1,2
fail:                           ; runs into the following
     sec
     rts
```

The 850 did also listen to the Os bootstrap from disk, then providing
the very same data at the bootstrap area at $500 so you could initialize
the 850 even without an autorun.sys file. (At least my 850XL does that,
probably the original doesn't, I don't know.)

Greetings,
     Thomas

I have Boxes and Boxes of Atari Books for Sale! Some I have Lots of and
some I have 1 or 2 left! I have more Atari Books than anywhere else.
Atari, one of the most well documented Computers ever! I have them Both
for 8 Bit & ST! Some you wont find anywhere else but here! On sale, all my
Atari Books, 20% off. E-Mail Atari@aracnet.com or call Ben@(503)256-9974!

http://BensCatalogs.Atari.org   DOWNLOAD FREE ATARI CATALOGS!
http://www.aracnet.com/~atari/specials.htm ALL ABOUT CURRENT ATARI SALES!
http://www.aracnet.com/~atari/8btbooks.htm 20% OFF ALL ATARI 8BIT BOOKS!
http://www.aracnet.com/~atari/stbooks.htm   20% OFF ALL ATARI ST BOOKS!

I've got a fast turnaround rate. Usually, Once I receive payment your
order goes out the same day. Customers love the speedy service! I have

lots of Atari SoftWare & Books. Which I can send by Media Mail Rate!

Please Direct all Replies Through E-Mail to: BenSells@Atari.org or Atari@aracnet.com. If you can't reach me, see my info at the Bottom!

Atari Jaguar, 8 Bit and ST Games/Software, Hardware/Accessories & References/ Books. FREE Catalogs on Ben's Domain at http://BensCatalogs.Atari.org or at http://BenSells.Atari.org Catalogs can be attached to,Requested by & Received Through E-Mail at Atari@aracnet.com or BenSells@Atari.org and Please Specify Atari 8 Bit, ST, Jaguar and/or all 3! OK, this one is rather old but it contains all of the information
you need to understand the SIO protocol:

Thank you all! That is most helpful information.

I've been working through the OS listings and Hardware manual to
better understand the boot process; a most tedious process.

I am looking for details on the specifics of the boot process, in
particular the bootup process when both a 850 and a disk drive are
present.

A few questions:
1. Is the disk drive booted first, after which the RS232 driver is
loaded from the 850?
2. Can the 850 driver be loaded without the presence of a disk drive?
3. Does anyone have a assembly or hex listing of the 850 ROM?
4. Any other links to original Atari Hardware and Software Documents
is most appreciated.

Thank you again and Regards,
TomCee

"Use the source, Luke!" The boot process is actually not so complicated.

> 1. Is the disk drive booted first, after which the RS232 driver is
> loaded from the 850?

If a disk is present, then the Os first loads the boot sector from disk, which again contains information on how many sectors from the disk are to be read to which address. Then the boot process continues at the init vector of the bootstrap code (load address + 6). This is usually the FMS bootstrap code, which will load "DOS.SYS" into the main memory. "DOS.SYS" then again loads "AUTORUN.SYS", which - could be - again load the 850 (serial interface) driver. The init process then returns with the carry bit clear if everything went fine. If the carry is set, the Os prints "BOOT ERROR" and tries again. Then, depending on the system configuration, several things can happen: If a cartridge is present, it is started thru its run vector at 0xBFFA. If no cart is present, the dup vector at $0a is called, which will call back into the FMS and boots or runs the DUP.SYS from disk (or from memory, depending on the DOS).

The 850 code has a nice "gotcha" in the sense that it is relocatable. It first loads its own init code, and this init code then bootstraps the main part of the driver to LOMEM. Then, additional data containing the relocation offsets are loaded, again from the 850 ROM. It is a table containing offsets, low and hi-bytes, that have to be adjusted to the target position of driver.

> 2. Can the 850 driver be loaded without the presence of a disk drive?

Yes, due to a special logic in the 850 interface. The interface box *also* replies to the "load first sector from disk" request, i.e. acts as a disk drive if no other disk is available on the SIO chain. See my reply above.

> 3. Does anyone have a assembly or hex listing of the 850 ROM?

Yes. I might have the binary somewhere. The ROM is for one degree the "operating system" of the 850, and to another degree the R: driver that gets loaded into the main memory of the system. For the latter part, I have a complete rewrite (part of Atari++) which has a couple of bugs of the original code fixed (< 8 bit communication, handling of parity, etc).

So long,
     Thomas

In addition to what Thomas said.

If both the 850 and disk drive are present only the DOS loads. Typically an autorun program on the disk will need to run to initialize the 850 *IF* you want to use RS232.

The SIO was really designed to be flexible to handle both smart and dumb hardware on the chain. For instance, the printer handler is in the computer OS so it doesn't have to load from the 850, the 850 just has to understand SIO info sent to printer is meant for it and route it. ~Same for the cassette handler being in the OS but cassettes are even dumber since they only has to record and playback.

By having things set up this way it allowed you to use other hardware like the MPP modem which hung off a joystick rather then get forced into using devices on the SIO chain.

Some SIO devices, like the 1030 modem, needed nothing else. You could just have the computer and 1030 plugged in and it would automatically load everything including a terminal program with dialer. Most people would just boot a disk drive and load a handler with more capabilities like file transfers rather then the program in the 1030 boot.

FWIW: I've heard the guy who did the Atari SIO is one of the guys on the USB patent.

Rick

True it has slowed down, but I do not think the Atari 8-bit has truly died. I
know of a number of people who have Atari 8-bit owners that have never come on
here to chat.

Yes, I have heard of it and have a copy. Nice game and really shows off what
the 8-bit can do.

Greetings,

I am looking for information on any current ongoing Atari 8-Bit/ST-Falcon,
CD/Disk based, Magazines and Newsletters.
Printed Magazines and Newsletters.

If anyone knows of any sources in North America or Overseas,
I would like info on how to subscribe, and contact info on the publisher(s).

Also would like to know about how many subscribers/active members if
possible.

Although the Internet is a great tool for information, I still enjoy a good
disk
and paper mag/newsletter. phantomm@suddenlink.net

I hope not. I've two 800XLs, a 65XE and a XEGS (all hen's teeth in
these parts) that I've barely turned on and I was hoping someone would
show me the ropes. Would it be rude to ask where the Atari 8 Bit
people hang out if not here?

Greetings, DanSolofish. Funny meeting you here. I too have been dipping my
feet in the Atari pool lately and I must say, the water is fine. There is a
bit of a learning curve as the Atari 8 bit machines are so different from
what we're use to. Anyway, I would start with Atarimania which is the Atari
equivalent of Lemon. I would also check out Atari.org and Atariage. I have
yet to find any forums that are as active as L64 though. :(

 http://www.atarimania.com/start.php

http://www.atari.org/

http://www.atariage.com/

If anyone knows of any other good resources, please post them. There are
alawys new people looking to gain a foothold.

Looking for the following Atari 8bit items..

ICD Multi I/O working or not working.
XF551 disk drives
XF551 upgraded with 3 1/2 drive mech.
Black Box hard disk system
Spartra Dox X cartridge

Contact me at phantomm@suddenlink for more info.
.

All ready have the SIO2PC up and running. The Internal IDE is in the mail. I also picked up a lot of three 130xe off of ebay. What a deal that ended being. 2 had the RAMROD mod and the other had a 320k already done. None of the mods were mentioned in the auction!!!

Hello,

MyDOS 4.5.1m supports at least up to 1 meg. I expect Sparta has a version
that will too.

Hello,

Well, for file copiers, having extra ram only helps in a 1 drive system. In
that case, copy the files to a ramdisk, then to the dest. disk, as many times
as needed. Very fast since the source is done once.

There are disk copiers that support extra ram though. SCXM is the 1 I use
most.

I was reading www.atarimagazine.com one of the old computes and it
gives the following information for being able to determine what
version of the OS you have. Why does Rev A on the 400/800 return 3
possible values? was there 3 different version of version A?

Operating System PEEK(65527)
400/800 Revision A 221, 87, or 243
400/800 Revision B 230
1200XL Revision A 10
1200XL Revision B 11
600XL 1
800XL 2

It's been about 20 years or so since I stopped doing any graphical
design using the Atari computers. I had moved on to the PC's and
different types of programming. Now I use Flash to do different
graphical interfaces for websites and realize that, using Actionscript
in Flash I can again do graphical design like I did on the Atari using
program commands (like using the plot, drawto etc). One thing I would
like to be able to do, which I used to know how to do on the Atari is
create a 3D wireframe globe that can be rotated in 3 dimensions. I
recall how to do a 2d version of it using sin, cos, pi etc. But a 3d
version is somethign I just cant seem to remember.

I would liek to be able to give the program an x,y position (like a
lattitude and longitude) , a close or near flag, and a direction of
rotation and have the wireframe rotate that position so it is in the
center of the wireframe. I know the basic wireframe could be drawrn
with a "simple" formula and stepped throu to make the movement, but
other than making the basic circle, I cant remember the formuleas. I
hope I am explaining this correctly

Bill,

The info for each different revision resides in TWO memory locations:
65527 *and* 65528.

Mapping The Atari - Revised Edition - By Ian Chadwick
http://www.atariarchives.org/mapping/appendix12.php
    65527 and 65528 should read 221 ($DD) and 87 ($57) for the
    400/800 revision A ROMS; 243 ($F3) and 230 ($E6) for the B
    ROMS. PAL versions read 214/87 ($D6/$57) and 34/88 ($22/$58),
    respectively. The 1200XL should read 10 at 65527 for revision A
    and 11 for revision B. The 600XL should read 1 at 65527, and the
    800XL, 2. For the 1200XL, 64728 ($FCD8) should not read 162
    ($A2).

d.

I thought I was the only one that watched old Police Academy movies.
Bravo!   You'll make a fine patrolman one day.

I too am looking for some of the above items.   I am looking to acquire
a CSS Black Box board *OR* an ICD Multi Input/Output.   My preference
being the ICD MIO. I'm also looking to acquire a stock Atari XF551 disk
drive.

You can contact me at the address listed in my signature.

One of the most famouse Atari games is MULE.
It was written by a person who did a sex change
operation. Seems like he/she went from Dan
to Danielle.

I figured out how to enable Indus Syncmonch for SuperDOS 5.1. SuperDOS
actually does not work with Indus. DOS XL with Synchromesh boot first, then
turn off the computer, insert the SuperDOS in Indus, turn on the computer.
SuperDOS boots WARP! as US Double 1050 speed. IF Indus is turned off and ram
is reset, SuperDOS wont work and freezes Indus. SpartaDOS 1.1 HS wont work
after DOS XL boot.

UPDATES SINCE PREVIOUS POSTING:
2008.01.18 added: Michal Pasiecznik (thanks Wojciech Pasiecznik)
2008.01.14 MadTeam: Graph2Font 3.8.5.6, MADS 1.8.0

------------------------------

Subject: Introduction

Conventions
-----------
All commercial vendors, developers, publishers, and repair shops should be
listed here.  "Active" PD/freeware/shareware developers should also be listed.
Persons or entities holding rights to products, but not selling or supporting
them in any way, should NOT be listed here.

"Vendor" = Reseller of products produced by others.  Types of products
sold are given in categories: new hardware, used hardware, PD/freeware/
shareware, (new) commercial software, used (commercial) software.

"Developer" = Producer of products.  Titles of products produced by the
developer are listed.  No prices are given.

"Publisher" = Publishes a print or disk magazine, or a book.  Complete
subscription or ordering information should be given, including prices.
Authorized online publishers of originally print or disk magazines are also
listed.  Online books are not listed.

"Repair Shop" = Can repair 8-bit Atari or related hardware devices.  Be
sure to make advance contact before sending anything to work on!

Entries are presented alphabetically by company name, or publication
title.  If no company name exists, a personal name is used.  "See"
references indicate complete information may be found under the given
heading.  "See also" references indicate closely-related information may
be found under the given heading.

The month/year that vendor information was most recently fully verified is
given at the "upper-right" of each entry.

Every entry must contain a valid postal address or web page address.

Unless explicitly requested by the vendor, no entries will include an email
address due to the overwhelming amount of spam that would result.

------------------------------------------------------------

The following is from http://www.upu.int/irc/en/ (2004.03.27)
```

When one writes to a stranger and requests a reply, it is considered polite to enclose a self-addressed stamped envelope. This works well when both persons live in the same country. However, if they are from different countries, the enclosed postage stamp will not be valid.

This technical problem was solved in 1906 when the Universal Postal Union, during its Congress in Rome, introduced the International Reply Coupon service. International Reply Coupons (IRC) are exchangeable in all member countries for the minimum postage of a priority item or an unregistered airmail letter sent to a foreign country.

The UPU's International Bureau processes approximately six million coupons each year and takes care of all accounting aspects. Developed countries are the largest users. The International Bureau does not sell ICRs directly to customers; they must buy them from their local post office. Although they are not obliged to sell ICRs, it is mandatory for all Posts of the UPU member countries to exchange the coupons.

Verfications -> YOU!

This list is in a constant state of development, and comes with no guarantees. Information of this nature constantly ages; therefore, the information contained in this list is constantly updated. Please use the latest release of this list whenever possible!

Remember, the success of this list is dependent on YOU, the reader, to send me updates that correct errors that you find. If you use this list, please do your part in keeping it useful for everyone!

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

The Atari computer intellectual property rights are currently owned by Atari Interactive, which is managed by today's Atari, Inc. Both of these are divisions of Infogrames Entertainment.

Hey guys - In an effort to get rid of a number of extra items in relatively
short order, I've broken down and listed some stuff on eBay. This includes
some Atari 8-bit hardware, software, and related items, including extras
from that recent "deal of the year" auction (no, I did NOT actually need
all 7 of those Adaptec boards :)) and other random parts that I either have
have too many of or simply can't put to good use. At any rate, if you see
anything you really want that does not yet have a bid, feel free to let me
know so we can kill the auction and deal offline. At any rate, here's the
link:

http://search.ebay.com/_W0QQsassZjwilkinson43

To contact me directly, just reverse each segment of my public email
address.

thanks!

Best I saw was Shadow IIRC written by some whiz from NTAC (North Texas Atari Club); it was 2.0 based and all ML with an interface similar to Sparta's where you could flag files from a directory. Total memory was used and multiple files transfered in each pass. We were all impressed when Mike Beard demoed it at our local club. Sadly I did not find it on XLSearch...

I dont believe Bob Puff sells the Black Box directly to the Public anymore,
but he does sell them through Lance at Video61@tcq.net

As far as I know Bob Puff still makes the Black Box. Thanx! =-=Ben=-=

you already have a PC serial <-> Atari SIO cable (hardware).

 Anyone get idea for me?
>
> Thanks!
> Jack

 I would surmise you want an interface to connect a 1050
SIO port directly to a PC serial port. Such a device is called
10502PC interface.
A 10502PC interface/cable is sort of unusual because most
people have an Atari computer to help out in the copying process.
I guess a 10502PC cable is usually used to copy copy protected
floppy disks to a PC, however, I believe a APE PRO cable
and software will do the job.
Maybe if you describe what you want to do, eg. copy commercial
Atari floppy to PC .atr or .pro file, it would be helpful to answer you.

Atari++ should then do for you, though I never actually tested this
since I lack the cable.

So long,
     Thomas

If I have this right, no such animal.

The only emulator that used a real 1050 was Xformer and that didn't use
any flavor of serial communication. Used bit banging on an ST or PC
printer port to drive the 1050.

Both Steve Tucker and Nick Kennedy have serial interfaces to drive a
1050, but they only do so to make disk images on the PC. I recall a few
people working with emulators asked for an explaination of the formats
but it wasn't to hook up a real drive to the emulator, it was to use the
disk images with the copy protection information rather then run a real
drive.

Rick

That is amazing that IMAGE still has meetings. Are any of the original guys
coming to the current meetings? I was active in the club from the time it
first started. They let me be an "officer" in the club back in the day, even
though I was just a kid then. I wrote game reviews for the newsletters, did
demos at the meetings, etc. I have many fond memories of that group.

Not sure about the PC, but I do have one like that for the Atari ST and Atari
Falcon machines.

Yes IMAGE still meets at my house. Infact, there is one this Monday the 14th.
Steve Elek is the club President. Paul Hochstetler is the Treasurer. I do the
meetings and write most of the newsletter. Some of the original guys come
around from time to time. I have been a member from about 1987.

I tried Stargate on Atari 800 a while back and all I got was a black screen.
I did a CRC32 check on the game to verify it transferred correctly from pc
to Atari using sio2pc and it looked good. Does anyone know of any
compatability problems with this game? TIA

The usual stuff. Is BASIC off? Does it require
a boot loader/menu disk? What are you doing to
load it? I presume we're talking Atari 800 plus emulator.

Look on the bottom of your machines, what do you see?

Here's what I have, can you add or correct?

Atari computers were made in....

400 - Hong Kong
800 - USA
1200XL - USA and Taiwan
600XL - Hong Kong
800XL - Hong Kong, Taiwan
65XE - Taiwan, China
130XE - Taiwan, China
800XE - China
XEGS - ?????

Thanks,

-Michael

I will try it again. Its been a while. LOL. But it was original Atari 800
... with indus drive and loading with DOS XL. Will try again and post my
results soon.

Probably need to put Stargate on a menu/boot
loader disk.

I checked a 16k stargate.xex and it didn't
require a menu disk.
The crc32 I tried on the file was
890AEF37 hex . It was a stargate.xex from
Holmes archive. There is also a stargate courier,
but that is different.
You sure your 800 has 48K? It loads all the
way to $BFFF.

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

The Atari computer intellectual property rights are currently owned by Atari Interactive, which is managed by today's Atari, Inc. Both of these are divisions of Infogrames Entertainment.

My 130XE was made in Mexico. Curious about that, I asked the seller at
the time about it, and here's the answer I got back (just in case anyone
is curious or bored enough to read it):

When Atari closed we bought thousands of computers from them. Most do
not have manuals or power packs. Those were added after they new where
they were going to be shipped. That particular computer was assembled in
Mexico City and would have been shipped to Cental or South America. When
Atari closed there plant in Mexico everything was shipped back to
California. We also have computers from plants in Canada, Ireland and
many Asian countries. We have very few English 130XE manuals left and
will run out long before we run out of computers. We have a bunch in
Spanish. Because we have had trouble with customers in the past we open
each computer and initial the keyboard and mother board with date
sold/tested. Most Atari 8-bit computers and games had no warranty tag on
them. In fact most of the brand new 130 XE Computers we have do not have
any label at all on the bottom. The bottom label would change with the
destination country.

Go to www.vintagetechnology.co.uk to download latest issue (February
'08). Only =A30.79p / $1.60 for a 40+ page magazine devoted to the
collection, preservation and history of all aspects of digital and
electronics technology, including computers, arcade games,
calculators, led watches, mobile phones, appliances, gadgets, robots,
radio, audio and tv.

This issue features:

The first LCD watches and their evolution
Early computing predictions - how many came true?
The first walkmans
Personal robots of the 1980s
Magnavox Odyssey - first home video game
Early pocket TVs
Review of the best modern TV retro-games consoles
The first computer viruses
Doom and the birth of LAN games
Epson HX-20
Interview with Tilly Blythe - curator of Computing at the Science
Museum
Computer time sharing memories
What type of collector are you?
Cleaning old electrical equipment
Commodore calculators

Plus sections on museums & collections, latest events & news and book
review.

You can also get the printed version for =A31.99

VTM aims to explore the legacy of recent past technology, explore new
'electronica' which could become or already is collectible, be an
enjoyable resource for collectors & historians and celebrate the
history and personalities surrounding this subject.

Cool info, thanks!

If you feel like it, would you be able to post a pic of the bottom of the
XE with "Made in Mexico"? Google can't find any such thing so far.

Edward, I am sorry I do not remember you, although I might recognize you if I saw you. I graduated high school in 1987, and I was doing less with the group by then. I do remember Mr. Elek. He was president when I was with the group. That is great that he is still active with it and is club president.

Don Turnock, Bruce A., Keith - those are the guys I remember. Mr. Elek would most likely remember them. We started out in the Atari computer store in downtown South Bend, then moved around as we grew in size. The 8-bit days were the best times in the club for me, but I did continue with it after I got my ST. I would definitely attend current meetings if I still lived in the area, but I am in Colorado.

Greg mentioned that there is a newsletter available through email. Since you are writing it, could I get a copy?

So were you the winner of this? If so, would you be interested in selling
the Mosaic 32K RAM card? I'm trying to see if a Mosaic 32K card will work
alongside a Magna 512K ramdisk and a Bit-3 80 column card to allow my 800
48K of "normal" RAM and access to the capabilities of those two boards.

Quite possibly. I was planning to put it in my 800, but then I realized
you can't take the 800 past 48K without adding some back switching logic.
Then I was planning to put it in my 400, but then I found out the keyboard
on my 400 doesn't work. So, the Mosaic card has thus far brought me
nothing but pain. :)

Anyway, I'll drop you an email directly to discuss.

I have an Axlon 32K card, however the problem is it will only work properly in RAM slot 2, which is the one my 512K Magna card wants to reside in.

What I really need to find out is if the Mosaic 32K card will work from RAM slot 1, with a normal 16K card in slot 2, to provide the full 48K of normal memory. I have the Bit-3 card in slot 3, so slot 1 is the only possible location that would allow my 48K, the Ramdisk, and the Bit-3 card simultaniously. If you have time and could test it from this location it would let me know whether this might work for me. If it does, I would happily send you the Axlon 32K card in addition to cost.

Thanks.

Jason Harmon

Most interesting, thanks.

I'm thinking someone should create a web gallery of pics of the bottoms of
all the 8-bit Atari computers, demonstrating where all they were made.
Has this been done already?

Why would anyone need this information?
Do the models differ when produced in different countries?

bye
Marcus

It is of interest, since they were produced in
many countries. There is some difference I've
heard of that the Chinese built ones had
some problems. I don't remember which
model had problems or what the problems were.
But I would steer clear of mainland Chinese
built ones if I could tell that.

:-(

I need a copy of XDIR ... or at least I think I do.

I need to copy files from my windows xp into an ATR disk image. Formatted
to ss/sd which contains the apx20173 disk menu.

I've tried googling but every link I find is outdated. Umich doesn't have
this file either.

TIA

http://www.langesite.com/Atari/Holmes/Holmes%202/PC%20Atari%20Programming%20Utils/

That may not wrap well. Uhm...
www.langesite.com/Atari/Holmes

Then pick Holmes 2. Then PC Atari Programming Utils.

This is for imageman.exe, which will work with
a DOS 2.5/MyDOS single density .ATR.
To put a PC saved Atari file on a DOS 2.5
style single density ATR.

You don't want xdir, I don't think it has been
fixed, because xdir won't work on XP.
But, you can find xdir at the langesite.com/Atari/Holmes anyway.

I believe there is another utility, that I don't
remember the name of, that will write PC files
to ATR images, maybe someone will remind.

I still use imageman.exe.

Oh, I think the other utility is Ken Siders
atrutil.exe, found in the same location as
imageman. Get atrutil.zip, it works in XP,
I checked. And it works with DOS 2.5
and FTeDOS (SpartaDOS). I think
single density.
Luck

I was looking at this picture of 2 different 1010 recorders, and was
wondering why/when did Atari change the location of the stop/eject &
pause buttons. Did they outsource the mechs or was there another
reason for the change?

Hello,

has anybody an idea to realize real random numbers in Basic on an Atari
8bit Emulator ?

In my opinion, the RND command don`t create real random numbers...

Helge

Taking numbers from the jiffy clock should
be pretty random. That may be how the
RND functions, however.

There's a RANDOM at 53770.
It takes a number from a poly counter.
In BASIC you could get a random number
between 0 and 9 with:
10 X=PEEK(53770)
20 Y=INT(X/25.5)

For instance. PEEK(53770) returns a random
number between 0 and 255.

Have you found/tried makeATR? I think it does what you want.

I have this in the FAQ:

- Chelco version has Stop/Eject, then Pause buttons
- Sanyo version has Pause, then Stop/Eject buttons

but I don't know the Why or When.

er... that should be either >= or simply >9

the idea is that eventually the location will return a good number w/
equal probability distribution, and if the program isn't time
constrained, then the wait shouldn't be all that long. btw, IMHO I think
that the Atari random number generator is the best for a personal pc
there is - all of the other ones i believe are math formula generated and

therefore, predictable.

Ron

Seems to be case sensitive.

Hmm, I wonder if I have the ability to make it not case sensitive....

Well, that looks to be complicated.

But here's a second copy, at a shorter, all lower-case URL:

http://mcurrent.name/ataritemp/how.jpg

Thanks.

LOL. I have always thought the same. I got started programming on an Atari and saw how "truly" random the number at 53770 was. Then I went to other systems and saw they were based on math formulas that would need to be seeded first and then would only continue changing after the random function was called. So giving it a seed of, lets say, 10, then you already knew what the next number would be. Of course, they expected you to seed using something like the current time clock so it would be more "random".

The Atari random numbers start at system startup. And doesn't wait for you to ask for a number before creating another one. I'm surprised this wasn't more common in future computers ... but then again, pc's (the serious ones) weren't designed for games ... they were designed for business where randomness was the last thing you wanted in a pc.

IMHO

Yap I just looked at it ... looks good altho a copy of ATRUtil? I see where
it does more tho ... its more recent (2004 versus 1998 of atrutil).

I will look at it more.

Thanks... I got it working. Turns out it doesn't work under spartados I
tried ... but it worked fine with smartdos. This game is impressive wow ...
too bad it was never offered for sale ...

Odd, worked perfectly when I clicked on it....

Sadly, although I recognise the piece of paper, I can't for the life of me
recall which company included it with their cartridges.

Hi,

> The Atari random numbers start at system startup. And doesn't
>wait for you to ask for a number before creating another one....

IIRC the random numbers are generated by POKEY, by way of hardware (random noise from what is effectively a reverse biased diode).

As you say, why more machines haven't used such a technique is mystifying.

I'm pretty sure it wasn't a reverse biased diode, but a good ol' LFSR

(linear feedback shift register). See De Re Atari, IIRC, for the
diagrams showing this. These create long strings of pseudo-random
numbers, but indeed do repeat after a known time. IIRC, POKEY keeps
creating numbers in this fashion at its clock speed (1.79 MHz?), and
your program gets the "current" one at the time. So "most" programs
will never notice any repeating sequences, as the majority of the LFSR
output is being ignored.

Your 8-bit friend,

Jeff Potter

              Welcome to the comp.sys.atari.8bit newsgroup!

                  Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family
of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE,
130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by
Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of
Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from
1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

The Atari computer intellectual property rights are currently owned by
Atari Interactive, which is managed by today's Atari, Inc. Both of these
are divisions of Infogrames Entertainment.

I am looking for a 130xe manual. Any links to a PDF version? Do you have an
extra hard copy laying around? Let me know.

Thanks,

Todd

The RND command in Atari Basic is based on the Pokey poly counter
register, which is really fairly random. An emulator has to emulate this
of course, properly. Depends on the emulator how well this works, but
for atari++, it uses the rnd() c standard library, but seeds it with
user input and the emulator timing, i.e. you do not get the same
sequence of random numbers over and over again.

So long,
     Thomas

Wonder, did Atari do this with any other periphials (change the mechs,
or internal parts) and still keep the same number on the box (ie the
1010)?

It would almost appear to be something that would have come with the
computer itself. If it was with a cartridge, I would think they would
mention the cart name in the text.

You might want to try the Bill Kendrick new person faq.
I don't believe much of a manual came with
the 130XE.

The 810 drives with MPI vs. Tandon mechanisms springs to mind..

There's also the early 850 Interface that's in a radically different
looking case, but the internals are the same.

They actually did - I have a 132-page spiral bound owner's manual (newer

ones came with the typical paperback binding) here. If I had a better
scanner, I would scan it for you...

The link was helpful. I no nothing about the Atari line. I just picked up my
first 130xe. There is enough information on the web to do BASIC programming.
Doing simple things like bringing up the internal system check or disabling
basic or what is the pot for on the bottom side for? I figure all that would
be in the manual. I am sure that I will win an auction sooner or later that
will have a user manual in it.

Hi,

  >....If it was with a cartridge, I would think they would
  >mention the cart name in the text.

Not necessarily....but you've got me thinking that perhaps that little sheet
came with Atari cartridges?

Unfortunately I can't get at any of my cartridges at the moment to check,
they're all boxed up and inaccessable. :-(

Works for me now. (I had just cut-n-pasted the link, I didn't type it :)
I also just cut-n-pasted the error, which had the lowercase. *shrug!*)

I think I have a pic of the early "black box" style somewhere. I'll
look for it.

And as long as we're on the topic, didn't the 410 undergo a radical
transformation early on?

Subject: MANY New Commodore Related Video Interviews

----------=

=AD-----

Thanks to Robert Bernardo's video work and 1.5 solid days
of editing and converting by www.commodore.ca, we now
have a substantial amount of video content posted from the
Computer History Museum's: Impact of the Commodore 64.

Note that many of these files are large and we only have a
limited amount of bandwidth. As such I recommend that
you RIGHT CLICK ON THE APPROPRIATE LINK AND
SELECT "SAVE TARGET AS" to download the files to
your computer rather than having them run through your
browser

http://www.commodore.ca/gallery/video/video.htm

Bil Herd - Commodore C128, Plus/4, Early Days
Bil Herd - Everyone Worked for Jack Tramiel
Bill Lowe - Father of the IBM PC
Jack Tramiel - Atari Deal, Amiga Chips, Irving Gould
Jack Tramiel - MOS Technology was Critical
Jack Tramiel - Commodore History His Own Words
Jack Tramiel - Commodore History - Interview
Steve Wozniak - Tries to Sell Apple to Commodore

NOTE: In a few weeks/months I will re-sort these
videos into the appropriate sections of our video page.

Well,
I also do not know why or when. But looking at my two 1010 recorders,
they are as different as you mention it...
- the one with Stop/Ej. and Pause buttons has a black label and is made
in Hong Kong
- the one with Pause and Stop/Ej.buttons has a white label and is made
in Japan
Alas, none of the two recoders has a year printed on it...

Hmm, I remember that Atari also used different mechs in XF551 drives,
the older models had Mitsumi drives (which also came with various
pcb`s), these drives only checked the index hole when formatting, so you
could read and write to the backside of a formatted disk without
problems. When you threw in the disk, nothing happened and when you
opened the drive knob the disk did NOT flop out... so the Mitsumi drive
was not really a floppy drive...

The later XF551 models (maybe only in Europe, I really don`t know) had
Chinon drives. Afaik, Chinon drives were also used for the Amiga
computers at some time, maybe they were cheaper than the Mitsumi
drives... Anyway, the Chinon drive always checks the index hole, thus if
you throw in the backside of a disk, it will not stop spinning, meaning
one cannot read, nor write nor format *the backside* of a disk on such
drives unless the disk has two index hole or some selfmade upgrade (in
german: Indexlochumgehung, maybe index hole redirection is the correct
english word for this)... But therefore, when you throw in a disk
(front/upperside) into the Chinon drive, the drive starts spinning for a
short moment, guess this could have been used for density detection, but
alas the XF OS does not support it. Next, when you open the knob of the
Chinon drive, the disk flops out, just as it should - it is a floppy
drive...

Enough said, but mystery still unsolved. I guess, they chose another
firm for the 1010 recorders after a while, simply because it was cheaper
than the one before...   -Andreas Koch.

There are some methods you can use to generate a very random number. It
would require some programming from some documentation, but it's relatively
trivial -- I implemented a formula in COBOL, for example. Google search
on some academic white papers (I used a 1995 master's research project
from the University of Southern Florida back in 1996) on random number
generation. You're bound to find one you can use.. Now, granted - they
are all based on seed as well, but they're very strong, mathematically

speaking.

I have definitely seen that paper before. I'm thinking it came with the
original 800 basic cart that was included with the 800.

OMG.....

What a thread.... I am showing my age here.... But I remember calling
boards (BBS's) in the 80s, all over the country looking for that
game.... All I could find Stargate Courier. When I finally **DID**
find Stargate, I was in HEAVEN!! Still play it once in a while. Glad
you got it working.

You are mistaken. You must be thinking of the Commodore-64 and Amiga.
Those were gay. Come on ... what kind of name is Commodore? Plus we know
about the fruitcakes that developed for Amiga.

It's really sad that things have gone the way they have. I can remember
a time, back before everybody became so "enlightened," when if you said
you were "gay" it merely meant that you were happy. No sexual
connotations involved.

In that context, the above-quoted statement is indeed true.

Hi,

> Both 410 versions and both 850 versions, along with the common
>810 version....

Thanks for that, I've never seen even a picture of the black 850 before!

Neither, for that matter, had I even come across the 835 direct connect
modem before either.

> and a pic of the uncommon (at least I never see them in person)
>Tandon 810...

Mmmm, I've only ever seen pictures of these. I wonder if any ever made it
across here to the UK?

Hi,

> I think I have a pic of the early "black box" style somewhere....

Thanks, I had one of the "tan" coloured ones - I didn't even know that black ones existed....

> And as long as we're on the topic, didn't the 410 undergo a
>radical transformation early on?

They certainly did. The original version was wider and "boxier" AFAIR.

Hi,

> I'm pretty sure it wasn't a reverse biased diode, but a good
>ol' LFSR (linear feedback shift register). See De Re Atari, IIRC,
>for the diagrams showing this....

You're right about what De Re Atari says.

Was it CBM's SID then that used a reversed biased diode to generate
noise/random numbers? I'm sure one of them did (though I was certain it was
POKEY)....

That is ok Steve. In 1987 I was not doing too much with the club and did not
come to ever meeting. I was more involved with my own Atari stuff. I saw Don
Turnock about 2 years ago He is into PC's now and even put together my wife's
setup. I have alot of the club's old 8-bit stuff, so I enjoy myself there. I
will see what Steve has to say about getting you a copy of the newsletter. I
do not care myself, but Steve would want you to become a member first. Dues
are $10 a year which is reasonable. I did forward you last email to me to
Steve, so he knows. I will see what he has to say at the next meeting in
February. Take care..

>Edward, I am sorry I do not remember you, although I might recognize you if

     It's an edited video put out by Geek Entertainment
TV and Blip.tv.   The full Jack Tramiel video interview
is at http://blip.tv/file/564449 , and the full Leonard
Tramiel interview is at http://blip.tv/file/564483 .
     I can't find the full Steve Wozniak and Bill Lowe
interviews at Blip.tv, and so if you find them, let
us know. At least the edited video gives us part of
their interviews.

          Thanks for the info,
          Robert Bernardo

how do you do ssh on the 8-bit? i didn't think the 8-bit would be fast
enough to do ssh encryption.

MI5 Persecution Update: Friday 13 November, 1998

If You Intend To Reply, Please Read This

If you have any questions or observations you would like to share with me, then you are very welcome to reply to my fax number 0171-681-1190. But please.... keep your response to one page if you can! I have had several people faxing my article back to me, including one MP faxing back twenty pages. I do not know if he had anything intelligent to say in his 20-page fax because I applied judicious use of the "Delete" key on my computer. Faxes over a page or two will be deleted without being read.

MI5 Resume Hostilities in Response to these Faxes

When I wrote last weeks "MI5 Persecution Update" I remarked how quiet my life had become. No longer! MI5 have restarted hostilities with a vengeance the past week, in response I believe to the faxes I have been sending to members of the House of Commons.

On Saturday 7 November I went to Clapham Picture House cinema to see the film "Antz" (a very enjoyable film). At the cinema, I was verbally assaulted by a group of teenagers with the words "still crazy", repeated about ten times. There was a film with that name showing at the cinema, but it was clear their abuse was directed at me. I do not look ill, so why would they pick on me? answer, the incident was set-up by the persecutors. One of the teenagers also said to another, "I don't know what we're laughing at".

The following day, Sunday 8/11/98, I was on my way to play squash when I was verbally assaulted by a youth who said "it was so funny", without the slightest trace of humour. What he meant by this phrase was that was funny, and they were trying to humiliate me. I have heard this phrase "it was so funny" used at me before many, many times over the last eight and half years.

Please Encourage Keith Hill MP to Help Me

I live in a bugged house, bugged both for audio and video. My movements

are monitored by MI5. The Security Service have followed me to Canada, to Poland and the Continent, to the States. I cannot work anywhere, not in England, not in Canada, because MI5 will destroy whatever employment I am able to obtain. I have asked Keith Hill MP to help me, and he has refused.

The situation is intolerable. It is Mr Hills job to help me out of this mess. So, please, as I said in the last fax a week ago: Do not waste your time returning multiple copies of my faxes to my fax mailbox, as some of you have done. Instead;

Please encourage Keith Hill M.P. to help me.

I am sorry to be using this device to encourage Mr Hill to help, but I think eight and half years are quite enough and it is time something was done to bring this matter to a close.

MI5 Persecution : BBC Newscasters Spying on my Home

This week's topic is the quite extraordinary claim that BBC newscasters such as Martyn Lewis and Michael Buerk have spied on my living room while they read the news. I currently have an advert running for the next six months in Private Eye's "Eye Say" column (at a cost of over ₱200) which says,"MI5 Persecution - BBC Newscasters Spying on my Home"; the story of my campaign in the Eye is on my Website at; http://www.pair.com/spook/evidence/plaint/priveye.htm

BBCs staff magazine Ariel also ran my advert "BBC Newsreaders Spying on my home" for one issue in the Personal category on 8/July/1997 before it was spotted and axed by editor Robin Reynolds; please see webpage; http://www.pair.com/spook/evidence/plaint/ariel.htm

Beginnings

The very first incident in the "MI5/BBC Persecution" occurred in June of 1990, when a newsreader reacted to what she saw in my living room at home as she read the news. My mother had brought an apple for me into the room, whereupon the newsreader smirked and giggled, apparently finding this funny. I couldn't believe what I was seeing. I carried on watching news and other television programmes to see if presenters would show signs of "interactive watching"; to my surprise, this happened again and again. Unfortunately, I did not have my wits sufficiently about me to videotape these programmes, and it is now almost impossible to obtain recordings dating back to 1990.

Most of the "TV watching" has occurred on the news, and most of it in summer 1990, although some as late as autumn 1993. My website has a few extracts of what might be politicians "getting at" me, in particular John Major and interviewer Dimbleby sharing a joke about the "Knutsford Guardian" which is almost certainly about me.

I sold my portable TV in autumn 1990 and stopped watching television regularly. I realise now that this may have been a mistake. What I should

have done was to watch TV and listen to the radio, but tape-record everything and make a note of what each excerpt meant to me. I would then be in a much stronger position as regards to evidence that I am now. That is what I am trying to do now, but unsurprisingly the TV/radio presenters have stopped getting at me, now they know they are being recorded.

Examples of Media Harassment

Here are a few examples which I can still remember of media harassment;

In early 1992 I was watching the BBC news with Martyn Lewis on a small black-and-white portable television at my then home in Oxford. I threw a term of abuse at Lewis; he flinched, then gave a grin and made a comment from which I understood that he had been on my side, but might have changed his mind as a result of what Id just said to him.

Victor Lewis Smith in his TV (BBC2?) program at the end of 1993, had a taxi-driver saying, "theyre all out to get me", to which VLS replied, "but you're quite intelligent aren't you?" (what a nice chap VLS is, compliments no less!)

Paul Daniels the TV magician, sometime in 1990-92 (sorry I can't be more precise but it was so long ago), made a "crying face" and put his face in his hands, which was his way of expressing that I was frequently crying in 1990-92, and that he and other media people found my crying funny.

Kenny Everett (deceased) on some talk show, compared me to a "huge ape" who "scratches himself"; he made some other remarks about what the "ape" got up to which unfortunately I cant remember. (I remember that Everetts comments were quite sympathetic and human, but were obviously about me.)

Stephen Fry on another talkshow (Wogan I think) talking about "masturbatory fantasies", he then referred to me with the words "you prat"; I wonder if the studio audience knew what he was talking about and to whom his comments were directed?

Griff Rhys Jones on Clive James' TV show, made a "lunatic face" (wide fixed grin) to which I said to the TV that he had a "face like a horse's arse", to which Clive James said to GRJ "did you hear that?"

Crimestoppers summer 1990, remarks by a Midlands police officer on the programme, while Nick Ross was presenter (as far as I can remember). The officer talked about "in car entertainment". Nick Ross said to officer, "why don't you stop doing it?" to which he replied, "we can't while he's like this".

BBC2 Newsnight in autumn 1993 had a piece on football hooliganism. A black interviewee said apparently of the hooligans, but in fact of me; "they're just idiots, carry on with the surveillance".

There was an incident with Jonathan Ross which I remember clearly; he was on both BBC and ITV television at the same time, one (ITV I think) was

recorded, the other channel was live. Ross has a speech impediment which causes him to pronounce his "r"s as "w". I sarcastically said something about "Mr Woss" to the recorded channel, then turned over to where he was live, and he repeated "Woss" with heavy emphasis and sarcasm.

On the radio, in spring 1994, Chris Tarrant made a sarcastic remark in his morning show, saying "he says were trying to kill him, we should be done for attempted manslaughter", to which another of the studio staff said, "oh no, dont say that". His comment was in reply to a comparison Id made the previous evening between my persecutors and the Polish secret police who murdered dissidents.

Martyn Lewis Denies & Lies, But Wont in Writing

In February 1997 I wrote to BBC Viewer & Listener Correspondence and asked them to investigate the claim that their newscasters had engaged in "interactive watching". They replied that they had asked Martyn Lewis and Michael Buerk whether they had engaged in such practices, and that they had both made verbal denials to VLC, but were refusing to put their denials in writing.

I can understand that they might think that if they were to make written denials to me, then many other people with my condition might write to them with similar questions. But Ive asked a couple of journalists if theyve been writing about me, theyve made written denials, Ive believed them, and I have not put their denials on my website because, since I believe their denials, it would not be relevant to publish them.

To me it looks as if Lewis and Buerk are happy to lie verbally but not in writing, because written falsehoods would place them unambiguously in the wrong, whereas they can try to talk their way out of verbal lies if they are ever caught, or perhaps even deny the verbal lies completely? If they lie without shame, then why would they have any shame about future lies about lying?

One of the strangest aspects of "TV watching" is that Buerk and Lewis have convinced themselves that their "interactive spying" is reasonable behaviour. Martyn Lewis thinks of himself as a "gentleman". He expressed in 1992 that he was "on my side". If this matter ever comes out into the open, I wonder what these newscasters will have to say for themselves, and what the British public will make of their behaviour?

Media Persecution Evidence on my Website

You may directly access the Evidence section on my website at URL;

The category currently contains four video segments, a number of audio files and three published articles. The first video of ITN's John Suchet is unfortunately a mistake - after looking at it again it is obviously not about me. The two Ken Clarke excerpts may or may not be about me; it is funny that he should keep on harping about "paranoia" and "madness", but I have given these ratings of only 30% certainty, as it is more likely that

they are not about me in particular, and Clarke is simply displaying the normal prejudices against the mentally ill found in much of society.

The piece I find most interesting is the Dimbleby/John Major interview from April 1997. I have assigned this a 90% rating. Dimbleby starts by emphasising a report from the "Knutsford Guardian". Major recognizes what's going on and joins in with a falsely apologetic "heaven forfend". The emphasis is on the first syllable pronounced "nuts" in "Knutsford", which is repeated three times. Of course this is hardly anywhere near convincing evidence; the really clear items were all in 1990-92, and they are basically unobtainable now.

If you're reading the website, have a look at the two files from David Hepworth's programme on GLR radio. The first one from 21/Feb/1997 has him talking about an "embarassment" of prizes and "absolute obscene", in reference I believe to the verbal sexual abuse that was being used against me at the time (and which unfortunately is still current). In the second file dated 9/May/1997 he again talks about "absolute embarrassment" of prizes, followed by laughter. To my mind he knows I am listening to his programme, and deliberately makes these remarks for my benefit, with very little attempt to disguise their purpose.

Bernard Levin - "Fanatic's Fare for the Common Man"

On 21 September 1991 this article by Bernard Levin appeared in The Times. It is reproduced in the Evidence section of the website, or may be accessed directly at URL;

To my mind, Levin's article described the situation at the time and in particular a recent meeting with a friend, during which I for the first time admitted to someone other than my GP that I had been subjected to a conspiracy of harassment over the previous year and a half.

Levin writes about a "madman running loose about London" who "bursts into tears, and swears it is all true. And it is." I am pleased to agree with his assertion that "it is all true" because the truth is what I presented to my friend in September 1991 and it is what is being presented to the readership of these articles now.

Conclusion

The harassment, in particular media persecution, was at its strongest in 1990-92. Today, I am recording everything I watch, read and listen, and the media have pretty much given up. It is now incidents "in public" which make up what there is of MI5s persecution. But much of the material from 1990-92 still exists in archives, although the organisations which have those archives generally wont make the material available to the public, for copyright and other reasons.

MI5 can no longer employ the media to persecute me, partly because journalists now know who is behind the persecution, and also because I would publish any instances. My mistake during 1990-92 was to not record instances as they happened; Ive learned from that mistake, and know better

now.

MI5 Persecution Update: Friday 19 March, 1999

If You Intend To Reply, Please Read This

Please.... keep your response to one page if you can! I have had several
people faxing my article back to me, including one MP faxing back twenty
pages. Faxes over a page or two will be deleted without being read.

Theyve started again. Why? I have no idea.

Unhappily, the persecutors, whoever they might be, have started their

activities again over the last two weeks. Usually they try to blame their activities on their victim, but this time they have stopped even pretending that the persecution is my fault. Their verbal abuse appears as gratuitous as it is vicious.

Last Sunday 14 March, I went for a meal in Londons Chinatown with some friends. As we were walking down Gerrard St, a man shouted loudly, twice, the obscenity which has been directed at me for some three years now. This followed previous incidents where the same words had been used. It is very upsetting to be verbally abused in this way and to know that the cowardly abusers are guaranteed to "get away with it" because if you report it then it will be assumed to be part of your illness.

Keith Hill MP (Labour - Streatham), my elected representative, as ever refuses to help.

MI5 Persecution : How to Identify the Persecutors

Usually delusional thinking does not allow the perpetrators to be identified, or the alleged persecution to be proved. My so-called "delusions" are different, because I have several times over a period of some nine years seen the same people, in widely varying places. Most importantly, their names have been recorded, on aircraft passenger lists and hospital register; and if only the police would do their job conscientiously then the persecutors could be identified and this unhappy story brought to a final conclusion.

BA93 Heathrow->Toronto, 10 June 1993

In 1993 I flew to Toronto for a holiday. On disembarking from the aircraft, a group of four men who travelled together looked in my direction, and one of them said, laughing, "If he tries to run away well find him".

I was absolutely stunned when I heard this. I wasnt surprised that they had followed me to Canada, but it shocked me that they had been on the same flight, and that one of them had foolishly given their group away. Unfortunately I was so stunned that I made no attempt to stop them as they got off the flight and proceeded into the terminal. I did not see these people again during my visit to Toronto. I do not know whether they followed me, or whether they were only part of a larger group, some of whom may have already been on the ground and awaiting my arrival.

Over the next few years I made a number of attempts, all unsuccessful, to obtain the passenger list for this flight. British Airways keeps passenger flight coupons for each flight; so if only the police would do the job that is being asked if them, then these four persecutors could be identified, and thus their employing organisation, which is very likely to be the Security Service, determined.

These four men were, apart from the joker who looked the odd man out in the pack, very serious individuals. They appeared to be in their forties or fifties, and my impression on seeing them was that they might have been

former soldiers. Their campaign against me concentrates on how "funny" their abuse is; but in this they are plainly lying, because they realise how awful will be the damage to the establishment of which they form part, if the truth about the persecution ever sees the light of day.

The riddle of "Alan Holdsworth"

During Oct/Nov 1996 I saw a doctor several times about an infection, and on 2 Nov 1996 I went to Emergency at the Ottawa Civic Hospital and saw Dr Worthington, who was then Chief of Emergency Medicine. I had to wait several hours before being seen, and several people jumped ahead of me in the queue. One of these was a grey-haired man in his forties or fifties. This may have been one of the men on the BA flight in 1993; I cannot be sure. When Dr Worthington asked his name, he loudly said, "Tad", which is the common abbreviation of my name. Dr Worthington looked puzzled, glanced at the sheet in front of him, and said, "but your name is Alan Holdsworth isnt it?". (I am pretty sure his Christian name was Alan; I cannot be sure of the surname). The man looked put out, and said quietly, "yes".

Unfortunately, I did not follow up this incident immediately. Some time later, I wrote to Dr Worthington to ask the name of this patient, but he refused to give the name out.

I saw this person again two and a half years later, at Ottawa Airport, just as I was about to leave for England. In the warm weather, he was wearing a coat and woolly cap, and pacing up and down in a menacing and aggressive manner. Presumably he thought he was pretending to be a "nutter" and in this way was getting at me; my impression is that he doesnt need to pretend, Holdsworth or whatever his name is is clearly a psychopath and in a healthy society such a person would be locked up, instead of being paid public money to exercise his psychopathic instincts. But todays Britain, a country where the MI5 secret police are given free rein and nobody dares raise a voice in protest, is not a healthy society.

"He doesnt know who we are"

For some reason, whenever I take a British Airways flight, I get hassled by the "persecutors who wont admit theyre MI5". Since this business started, I have travelled BA three times; once in June 1993 BA93 (see above), once to/from Europe during Dec 95/Jan 96, and once in June 1998 with my mother to visit her family. The last journey, I was abused by two "plants" who kept repeating, loudly, "paranoid" (I have this recorded on minidisc). Presumably British Airways gives MI5 the seating plans for their flights, which allows MI5 to position their agents of abuse three rows behind me, so I cant face them, and they are throwing abuse at the back of my head. I have travelled BA as infrequently as possible; to Canada, I usually travel Air Canada.

Anyway, lets return to the second of the three BA trips, and in particular to the flight on 2 January 1996 from Berlin Tegel, to Heathrow, and onwards to Montreal Mirabel. Id waited all night at Tegel for the flight,

and was very tired on reaching Heathrow. On the plane to Montreal, two youths sat about three/four rows behind me and to the right, in the window seats. One of them, a rather fat "asshole" to use the Americanism (it fits), kept on going on about "this bloke", saying among many other things, "he doesnt know who we are".

Now that form of words is particularly interesting, because from May 1995, some 8 months previously, I had been vigorously denouncing the "MI5 Persecution" on Usenet. So if Id guessed wrong, then you might expect the harassers to crow about it; which they have not done. If I had guessed right, and the persecutors have been silent before and since this flight, then they could either admit they were MI5, which would be a very serious thing for them to own up to, or they could brazenly lie, in which case I would report their lie, and since many people must surely know who they are, they would lose all credibility. So they have remained silent; apart from this one phrase on the BA flight, where one of their agents said, "he doesnt know who we are". Note carefully that this phrase is NOT a denial, it only appears to be a denial; since it does not say that my guess was wrong; it only states the objective fact that I do not know the identity of the persecutors, without giving any information as to the validity of my guess. Which leads me to posit that my guess was correct.

Please.... keep your response to one page if you can!. Faxes over a page or two will be deleted without being read.

The Usual Words

The persecutors-who-wont-admit-theyre-MI5 have been active again this week. On Saturday 20/3/99 I visited Ravenscourt Park in west London, and was verbally assaulted with the usual words, "something wrong with him". This audio file is on the web at URL;

This afternoon (Friday 26/March) I was again verbally assaulted while travelling by bus. The same sexual obscenity was thrown at me, and the incident was recorded on my minidisc-walkman. Because of the deeply offensive nature of the slander, I will not be posting this on the website.

Keith Hill MP (Labour - Streatham), my elected representative, as ever refuses to help.

MI5 Persecution : Browse Website

The March 1998 issue (number 42) of .net Magazine reviews the website describing it as an "excellent site". Since August 11, 1996 over 50,000 people have browsed this website.

You are encouraged to read the web pages which include

a FAQ (frequently asked questions) section outlining the nature of the persecutors, their methods of harassment through the media, people at work and among the general public

an evidence section, which carries audio and video clips of media and workplace harassment, rated according to how directly I think they refer to me

objective descriptions of the state security agencies involved

scanned texts of the complaints I have made to media and state security agencies involved

posts which have been made to netnews over the last four years on this topic

This article outlines what is to be found on the webpages, which you are encouraged to browse for the complete story.

Frequently Asked Questions

Your excursion through the website starts with the "FAQ - Frequently Asked Questions" portion. MI5s campaign of harassment against me has been going on for almost 9 years, and its longevity and breadth is reflected in the FAQ. Many thousands of people in Britain and abroad, including some recipients of this fax, have known for many years of MI5s activities against me. The FAQ describes the mass "Omerta suppressing its publication"; we pretend Britain is part of the "Free World", yet the British Secret Police, which is what MI5 are, carry on for many years a campaign which politicians and the media know about, and rely on the silent complicity of so many thousands of people.

The FAQs introductory article names those who are "in the know"; media figures like Martyn Lewis, Michael Buerk, entertainment figures like Chris Tarrant, politicians and many in the general public, "all united in a conspiracy which breaks the laws which the UK does have regarding harassment, and all completely uncaring for any semblance of decency or elementary respect for individual rights.

Broadcast media play a key role in the harassment. The very first incident in June 1990 was when a television newsreader reacted to what she saw happen in my living room at home; such incidents of "interactive television" are still happening in 1999. The same goes for radio stations such as Capital FM. In spring 1994, Chris Tarrant on his Capital morning show made an aside to someone else in the studio, about a person he didn't identify. He said, "You know this bloke? He says we're trying to kill him. We should be done for attempted manslaughter". Tarrant and Capital have made strenuous efforts to avoid answering this charge.

Perhaps worst of all, MI5 have deliberately set-up many incidents in public places such as tube stations, shops, cinemas, where they have paid people to throw abuse at me. Since MI5 obtains funds to the tune of 160 million a year to fund its criminal activities, it has funds both to pay its operatives and to "buy" media figures and members of the public to take part in its campaign of persecution.

The Security Service are professional liars. They throw slanderous abuse, yet they refuse to admit out loud that they are doing so. When challenged about their activities through the Security Service Tribunal they lie and deny their activities. They induce other workers and managers at places of employment to take part in their campaign of abuse, presumably by buying them in the same way they buy media figures.

Complaints, and Press Coverage (BBC Lies, MI5 Lies)

As you might expect I have challenged both the Security Service, through the Security Service Tribunal, and offending broadcasters, to own up to what they have been doing. And as you might also expect, all of these

people have lied through their teeth. Still worse, they have refused to commit unambiguous lies on paper; they have couched their lies in bureaucratic language, and allowed others to make false assurances and tell lies on their behalf. So when their lies are exposed, they will then tell further Clintonesque lies about how they werent really telling lies in the first place!

On 6/Feb/1997 the BBC told me they would "never engage in any form of surveillance activity such as you describe". The BBC told me Buerk and Lewis had refused to put their lies in writing, but had stated verbal falsehoods denying my accusations of "interactive watching" during news broadcasts. Clearly Buerk and Lewis fear being caught and exposed, so they hide behind their Viewer Correspondence department.

In March 1997 I issued a summons against the BBC to try to "smoke them out". This summons was struck out as "disclosing no reasonable cause of action", because I had acted as a Litigant-in-Person and most LiP summons are treated thus. My case was arguable in law, so the striking out was unjust.

In June 1997 the Security Service Tribunal wrote to me regarding the complaint I had brought against MI5 in February. They say, "The Security Service Tribunal have now investigated your complaint and have asked me to inform you that no determination in your favour has been made on your complaint." I think you can guess the contempt which I feel for the Security Service Tribunal, who have never made a determination against MI5, and act as merely a whitewashing body for the Security Service. Unsurprisingly in May 1997 the Interception of Communications Tribunal gave the same result.

The last few items of "Press Coverage" give details of mentions of the MI5 Persecution in various magazines and newspapers such as BBCs Ariel, the Observer and .net magazine.

Evidence

Some audio and video clips of evidence have been recorded. My weakness in this area is because most of the really unambiguous evidence would have been obtainable in 1990-92, but I wasnt taping anything at the time, and its very difficult to now obtain recordings from that period.

The audio clip "Life is so Hard" relates to harassment at my workplace in Canada. In the latter half of 1996, I was sitting near to co-worker Mark Lee, who kept coming out with words and phrases which showed MI5 were supplying him with data from my home life. For example, I would say something on the telephone at home, and the following day he would repeat verbatim what I had said. When Mark Lee saw I was recording what he was saying, he started to make his remarks more ambiguous, or make the obvious ones out of earshot of the recorder.

However, during the evening of 12 November 1996, at home in my apartment (flat to you UK-ers), I said "life is so hard, and then you die". A nihilistic, negative thing to say, but quite distinctive. The following

day, 13 November, Mark said loudly, "life is so hard eh, and then you die" followed by loud laughter. I captured this on my tape-walkman and the computer-audio file is posted on the website.

There are a number of other audio files in the websites "Evidence" area demonstrating the abuse to which MI5 subject me to through their paid agents.

Also in this section is a very interesting article by journalist Bernard Levin, which followed a meeting I had with a friend in 1991, and to my mind describes in some details Levins "artists impression" of the meeting. He talks about a "madman" who "bursts into tears, and swears it is all true. And it is."

Internet Newsgroup (Usenet) archive

From May 1995 until the present day, this matter has been discussed exhaustively on internet newsgroups. The most interesting articles from the first two years of posts are documented here. This area is worth reading since most of the questions which the reader would ask, have been asked at some time or another by someone on usenet. Perhaps the very first article posted sums it all up so succinctly;

Date: Thu May 4 18:27:24 1995
Newsgroups: alt.conspiracy
Subject: BBC's Hidden Shame

Remember the two-way televisions in George Orwell's 1984? The ones which watched you back? Which you could never get rid of, only the sound could be turned down?
Well the country which brought Orwell into the world has made his nightmare follow into the world after him. Since 1990 the British have been waging war against one of their own citizens using surveillance to invade privacy and a campaign of abuse in the transmitted media in their efforts to humiliate their victim.
And the most remarkable thing about it is that what they do is not even illegal - the UK has no laws to protect the privacy of its citizens, nor does it proscribe harassment or abuse except in the case of racial abuse.
A lot of people in England know this to be going on, yet so far they have maintained perfect "omerta"; not a sound, not a squeak has escaped into the English press, and for all the covert harassment absolutely nothing has come out into the public domain.
Have the British gone mad? I think we should be told.

So how much deeper will the persecutors-who-wont-admit-theyre-MI5 sink in their campaign of lies and intimidation? Each time I thought they could sink no lower, they have managed to surprise me. You thought it could never happen here? When the MI5 British Secret Police make their smears against me, it is the corruption of the Establishment, which they are part of, that is demonstrated.

MI5 Persecution Update: Friday 16 April, 1999

If You Intend To Reply, Please Read This
Please.... keep your response to one page!. Faxes over a page or two will
be deleted without being read.

BBC newscaster Nicholas Witchell cant stop himself laughing

During 1990-91 there were very many instances of "interactive
television" where newscasters and other TV presenters saw on a screen
before them what was happening in my home, and reacted, frequently by
laughing at me. During this period I unfortunately did not record these
programmes. For the last year or two, I have been recording everything I

watch, and there has been a drastic decrease in such incidents.

However, on occasion, television presenters do still engage in "interactive watching" and react to what they see. This has been evident with Jon Snow of Channel Four News recently - a particularly interesting case, since it has been established that he cannot be corrupted by money (it is well-documented that MI5 offered him a tax-free salary and he turned them down). I wonder what device MI5 are using to encourage him to do the "interactive watching"?

On Saturday 10 April 1999 at 7pm, Nicholas Witchell on BBC2 News reacted when he saw that I was watching the programme, and I have his reactions stored safely on videotape. I have watched this tape several times and I am entirely confident that my evaluation of his reactions is correct. For several minutes his upper lip quivered in mirth as he attempted to keep a straight face. Then finally his self-control evaporated through the excuse of a weak joke and his face collapsed into a grin.

The strange thing is that I dont know why he was laughing at me, what I had done recently to "deserve" to be laughed at. The MI5 persecutors usually manage to invent some justification as to why people should laugh at and/or abuse me ("hes an X", "it was so funny" etc), so Mr Witchell could have been laughing for any number of reasons. Perhaps he found the views I have been expressing in these articles amusing? I suppose if youre paid enough money and ordered to laugh then even the most innocuous thing becomes funny.

Jon Snow of Channel Four News cant stop himself smirking, either.

On 12 February 1999 I was watching Channel Four News presented by Jon Snow. As usual, I was recording the programme, so that if anything out of the ordinary happened, Id be able to go back and watch it again.

Now, Jon Snow, by his own claim, is uncorruptible. He says he turned down an offer of a substantial tax-free salary from MI5 - they wanted to make him their mouthpiece, and he told them where to get off.

So you will be most surprised to learn that Jon Snow "interactively watched" me that evening, and on many other evenings. Approximately fifteen minutes into the programme, he announced that the US President would be making a live appearance at about 7.30pm; I looked at the clock on the mantelpiece; and Snow saw me looking at the clock, and visibly tried to suppress a smirk.

Uncorruptible, are you, Mister Snow? If not money, then why are you watching me, Mister Snow? Are they forcing you to watch me? Cant you turn the monitor off, Mister Snow?

Keith Hill MP (Labour - Streatham), my elected representative, as ever refuses to help.

Comparing the MI5 Persecution with German "Final Solution"

It might seem offensive to compare the mass murder of millions of civilians in wartime with the peacetime persecution of merely one person. Yet the comparison has been coursing through my mind for several years now, because the brutality of German intent to "sub-humans" is very much comparable to the brutality of British intent to someone they vituperate and term "not up to British standards". The methods may differ, but the persecutors mindset is the same.

The Germans first targeted the mentally disabled, too

During WW2 millions of ethnic Russians, Poles, Jews, mentally ill, gypsies and other minorities were rounded up and murdered in purpose-built camps by the German regime, in the name of "racial superiority". Fifty years on, the British Secret Police, MI5, instituted a campaign of mass hysteria; but in their cowardice, limited their activities to one single victim.

It is instructive to note that the early German "cleansing" effort was directed primarily not at Jews, but at the mentally ill. The Nazis set up the T4 project in the thirties to "cleanse" away 70,000 mentally disabled people, including schizophrenics and epileptics. After WW2 the Jews with their media influence used the reaction from the holocaust to roll back anti-semitism in the Western countries; however, the mentally ill are today still a persecuted group in the modern Western world as they were under the Nazis (the current Jewish home secretary in the UK intends to bring in laws for incarceration without any criminal charge for some mentally ill people - he protects his own minority, but does nothing for the other minorities in todays society), and this continuing bias forms a central cause for the current acts of persecution in the UK.

Widespread knowledge of what is happening to the "un-British" minority

In both the German persecution of the thirties and early forties, and the current British persecution, many, many people are well aware of whats happening. There is widespread complicity through inaction of populace; and in a substantial proportion of the mainstread population, the persecution had/has widespread enthusiastic support; yet in both the German case in the 1940s and the British today, the existence of persecution is a mass secret which must be never admitted out loud. In the recent Lawrence case this "secret bigotry" has been termed "institutionalised racism", and that is a very good word for what the British are doing today The persecutory attitudes and omerta regarding them are so deeply ingrained in the national psyche that they define the national mood

During WW2 many Germans knew minorities were disappearing, and through inaction quietly condoned their government's mass murder of "un-German" minorities and inferior "foreigners"; and in the 1990s, similarly, many English people know what the MI5 British Secret Police have been doing, and not only condone it, but actively take part, because of xenophobia against the "un-British" unit minority that is the target of "British" actions. This attitude by the British persecutors has been made explicit through the words "he's not up to British standards"; the British

seem to have found their very own "untermenschen" to victimise.

Why these obsessive "holy wars" happen

This type of aggression occurs when the majority is threatened or humiliated in some way, economically, militarily or culturally. In pre-WW2 Germany the threat was primarily economic and military, following Germany's humiliating defeat in the first world war and the reparations it was forced to pay. In modern Britain, one might guess that the majority English who are behind the persecution feel pressured by the swiftly diminishing status of Britain in the world, and the rapidly increasing coloured colonisation of their country, which in time will see the ethnic English a minority in their own land, and their more antisocial elements, unable to reply to the obvious threat, instead project their aggression onto another, weaker, unit minority

In both cases there is a whiff of "holy war" or irrational obsession with the persecution. Certainly the German behaviour fifty years ago bordered on the not-quite-sane, and the current British behaviour towards their chosen victim is strongly tinged with a leave-taking of reason. And the choices open to the victims are the same, since MI5 will never allow me to escape them, "if he tries to run away we'll find him", just like the commandant of Auschwitz telling the new arrivals, "the only escape is through the chimney".

The Victim Will Destroy Us if We Dont Destroy Him First

The persecutors propaganda is the same. Fifty years ago the Germans said, "if we don't do it to the Jews then the Jews will do it to us"; and MI5's propaganda in the early nineties concentrated on their victim as a "monster" aesome "untermenschen" minority.

"We are decent fellows" say the Brutal Persecutors

During the course of researching this article I read part of the very interesting book, "Hitler - A Study in Tyranny", by Alan Bullock. This volume contains a quote from Himmler on the "Final Solution";

"Most of you know what it means when a hundred corpses are lying side by side, or five hundred or one thousand. To have stuck it out, and at the same time .... to have remained decent fellows, that is what has made us hard. This is a page of glory in our history which has never been written and is never to be written."

In the MI5 persecution, too, there is a thread of deliberate brutality to the sick and vulnerable, while the persecutors maintain that "we are decent fellows". There is almost a conscious schizophrenia in the self-attitudes of the Security Service operatives and those in the public who they employ against me, which reflects the contradiction evident in the German attitude above. On the one hand, they stoop to the lowest and most base behaviour; yet at the same time, the MI5 operatives tell themselves that since they are civilised British people, then surely they must by definition be "decent fellows". Any indecency is made the fault of

the victim; "hes making us persecute him, so we need feel no guilt".

Yet the conduct is atypical of the way these peoples see their normal modes of behaviour. Befslaughter was not typical of normal German behaviour up to that point. Similarly, the current MI5 abuse goes against the grain of British self-image as being "reserved" and "decent", since they are using terms of abuse which are common among blacks and other supposedly less-developed races, but not among the English.

Conclusion

The ultimate aim of both persecutions is the humiliation and physical extinction of the persecuted group. The Germans did this in a very direct way; the British Secret Police MI5 are acting indirectly and relying on self-extinction of their target, because in peacetime and in the current somewhat false climate of "political correctness" more direct methods are impossible. If MI5 undertook more direct action the mass "omerta" would be broken.

I have written this article with sincerity to show how a historically recent persecution in another country parallels what is being done in this country today. In both cases, the evil-doers are of their countries establishments, and rely on widespread tacit support to maintain the persecution and omerta around it. While the holocaust was undoubtedly the greater evil, it is important to be aware of the fact that had the Germans not been defeated fifty years ago, their plans would have gone through to total completion. In Britain today no force threatens the "permanent government" of which the Security Service forms a part; and it looks very unlikely that the wrongs perpetrated by the MI5 secret police will ever be revealed to public view, and the British secret state brought to justice for its evil actions.

MI5 Persecution Update: Friday 30 April, 1999

If You Intend To Reply, Please Read This
Please.... keep your response to one page!. Faxes over a page or two will be deleted without being read.

Somewhere between 0 and 100%

The last few days there have been no clear recordable instances of abuse. However, while travelling on the Underground, while walking around near my home and going to friends homes, I am constantly troubled by thoughts that those people over there might be about to get at me; that the couple sitting in the opposite seats laughing are in fact laughing at me; et cetera, et cetera.

A comment by a scientist to the BSE inquiry sticks in my mind. He described the possible scale of the epidemic as "between 0% and 100%". It might not be happening, it might not happen at all, to any discernable degree.... or it might be total. Without clear recording, which seems to have become impossible the last couple of weeks, there is no way of knowing whether the harassment really is continuing, whether we have entered a temporary hiatus, or whether perhaps it has perhaps stopped for now.

But for the time being I think there arent any reasons to dicontinue these faxes. I only re-started them six weeks ago in response to a resumption of MI5 harassment; and I think I will need to be more convinced of absence of persecution before I discontinue my complaints.

The Newscasters are still watching

In the last few weeks there have been at least a couple of fairly overt instances of "interactive watching" by newscasters. I reported this in a

previous "MI5 Persecution Update".

These instances are really very rare compared to 1990-91, when there were many dozens of such occurrences. Undoubtedly the reduction is due to my practice of videotaping everything I see. Recently I had the opportunity of showing this years "happenings" (Jon Snow/Nicholas Witchell) to my psychiatrist, and he agreed that in both cases the newscasters were expressing merriment without visible cause, and that objectively it might be possible for my claims to be true - although of course other people reported similar thoughts to him, and this thinking is usually a symptom of illness.

Read About the MI5 Persecution on the World Wide Web

The March 1998 issue (number 42) of .net Magazine reviews the website describing it as an "excellent site". Since August 11, 1996 over 50,000 people have browsed this website.

You are encouraged to read the web pages which include

a FAQ (frequently asked questions) section outlining the nature of the persecutors, their methods of harassment through the media, people at work and among the general public

an evidence section, which carries audio and video clips of media and workplace harassment, rated according to how directly I think they refer to me

objective descriptions of the state security agencies involved

scanned texts of the complaints I have made to media and state security agencies involved

posts which have been made to netnews over the last four years on this topic

Keith Hill MP (Labour - Streatham), my elected representative, as ever refuses to help.

MI5 Waste Taxpayer Millions on Pointless Hate-Campaign

Recently I was talking to an independent observer about the nature and purpose of the perceived campaign of persecution against me. The person I spoke to, a highly intelligent man, said he was struck by the utter pointlessness of the perceived campaign against me. He also said that, if my theories were in fact true, many people would have to be involved, in the surveillance itself, and in the technical side of the delivery of information from my home to TV studios for example, if the "interactive watching" were happening as described. He voiced these thoughts without any prompting from me; but both I and other observers had arrived at pretty much the same conclusions, some years ago.

I saw a team of four men at Toronto Airport in 1993

To carry out the surveillance alone, full-time, would employ four or five

men, or their equivalent in terms of man-hours. Each man would "work" an eight-hour shift, so you would need at least three men doing the surveillance, plus a connecting link / manager. An indicator that this estimate is correct arrived in 1993, when I was accosted by one of a group of four men at Toronto Airport; he said, laughing, "if he tries to run away well find him". Plainly these were the men who had been involved in the intrusive surveillance of me for the preceding three years.

On other occasions, I have seen the same man on two or three occasions. On one such occasion, at Ottawas Civic Hospital in November 1996; he gave his name to the doctor as "Alan Holdsworth" or some such; my hearing is not very good sometimes and I am not sure of the surname, although I am sure "Alan" was his first name. I saw exactly the same man again in Ottawa, at the airport, in July 1998. Obviously, other people must be "working" with this person; he would not be the sole agent employed in this case.

Usenet readers views on the Cost to MI5 of Running the Campaign

Here's what a couple of other people on internet newsgroups / Usenet (uk.misc) had to say regarding the cost of running such an operation...

PO: >Have some sense, grow up and smell reality. What you are talking about
PO: >would take loads of planning, tens of thousands of pounds and lots of
PO: >people involved in the planning, execution and maintenance of it. You
PO: >must have a very high opinion of yourself to think you are worth it.

and......

PM: >But why? And why you? Do you realize how much it would cost to keep
PM: >one person under continuous surveillance for five years? Think about
PM: >all the man/hours. Say they _just_ allocated a two man team and a
PM: >supervisor. OK., Supervisor's salary, say, #30,000 a year. Two men,
PM: >#20,000 a year each. But they'd need to work in shifts -- so it would
PM: >be six men at #20,000 (which with on-costs would work out at more
like
PM: >#30,000 to the employer.)
PM: >
PM: >So, we're talking #30,000 x 6. #180,000. plus say, #40,000 for the
PM: >supervisor. #220,000. Then you've got the hardware involved. And
PM: >any transcription that needs doing. You don't think the 'Big Boss'
PM: >would listen to hours and hours of tapes, do you.
PM: >
PM: >So, all in all, you couldn't actually do the job for much less than
PM: >a quarter million a year. Over five years. What are you doing that makes
PM: >it worth the while of the state to spend over one and a quarter million
PM: >on you?

Those are pretty much the sort of calculations that went through my head once I stopped to consider what it must be costing them to run this operation. At the very least, a quarter million a year - and probably much more, given the intrusive and human-resource-intensive methods employed. Times nine years. Equals well over two million pounds - and probably much, much more.

Its wasteful for someone with my skills to be unemployed

The wastefulness of the MI5 campaign against me is not just that of futile expenditure on their side. It is also extremely wasteful for someone with my talents to be unemployed and on a disability pension. I am highly qualified in numerate disciplines, yet am unable to work, specifically because of the MI5 hate-campaign against me. It is a terrible waste of resources for a supposedly efficient economy like that of the UK to be squandering the talents of a skilled and capable worker.

I made every effort to remain in employment for as long as I could, but ultimately I was defeated by MI5s employment of massive resources specifically targeted on my workplaces with the sole aim of seeing me evicted from those workplaces. You might expect this sort of behaviour from the Stasi or some other secret police force in a communist country where labour is cheap, and the governments aim on seeing its citizens confined; but for a supposedly free and efficient economy like Britains, the wastefulness resulting both directly and indirectly from the Security Services activities is simply criminal, and should never be allowed.

The international dimension means the costs are multiplied many times overoer had any sense, then they have surely taken leave of them over the last nine years.

Four years of persecution in Canada

The persecution re-started within less than five minutes of my arrival in Canada, as documented above, and in the "frequently asked questions" article on the website. The words, "if he tries to run away well find him" spoken by one of the harassers at Toronto Airport are now imprinted on my mind.

A year later I emigrated to Canada, intending to find a job and settle there, hoping that MI5s interest in me might dim with time. I did manage to find work there, but my hopes of avoiding Security Service interest were ground into dust. As detailed above, I saw the same man in November 1996 and July 1998, both times in Ottawa. Apart from these encounters, there were numerous incidents between 1994 and 1998 of harassment, of an identical nature and in most cases using identical words to what had occurred in the UK. It became quite clear to me that the permanent surveillance and harassment operation which MI5 had subjected me to in England was being continued.

For a team of four or five men to be employed overseas must cost a lot more than if they operate in their home country. And for MI5 to continue the operation for a period of over four years, continuously, must cost many hundreds of thousands of pounds. This confirms my belief that the state is funding the campaign against mehat the Security Service receives current annual funding of #160M. Divided by 1850 staff, works out at #86,000. But the unit annual cost of each "watcher" must be much higher than this, especially given the frequently mobile and overseas nature of their actions of the last few years. A very conservative figure might be a

little over #100,000 pa for each of a team of five people, or half a million pounds per year. For nine years, so far. So the most conservative estimate of the surveillance element alone is perhaps four or five million pounds since 1990.

This guesstimate is of course theoretical - I am not privy to inside details of how MI5 split their funding. But to take some other examples, the cost of a US counter-surveillance specialist per day is USD 5,000. Even if the agents permanently assigned to me are not of this calibre - even if they employ specialists when difficult work planting bugs etc is encountered - their salary and support costs must still be very high. The individual agents are doing well for themselves as they are well-paid to exercise psychopathic instincts which in any sane society would see them in prison; but the taxpayers who must fund this terribly wasteful exercise are being "done" out of hundreds of thousands of pounds each year.

It must be emphasised that the above estimates are highly conservative. Besides the surveillance operation, it must carry a high cost in man-hours to propagate covert slanders through the population; to setup and maintain the "interactive watching" links to TV and radio stations, which these organisations continue desparately to "lie and deny"; and to induce antipathy in co-workers which would not otherwise exist.

Why they are wasting Millions of Pounds on a "Nobody from South London"

As remarked in the prologue to this article, it is really most extraordinary that the Security Service spends a chunk of its budget, every year for nine years so far, on a meaningless campaign against a "nobody from South London". That they are spending such a large amount of money has been confirmed to me on several occasions, usually by oblique references to "its costing this country millions". The supposed "logic" behind the persecution is that MI5 wish to avoid their harassment of me, and the involvement of the UK media, to be made public; yet as the reader will appreciate that is a circular argument, "theyre doing it because they want to keep it secret and avoid humiliation for themselves and their country" begs the question, "why did they start doing it in the first place?", to which in truth I myself do not know the answer.

Plainly MI5 with its rich budget can afford half a million pounds a year to waste on a "nobody from South London". Some time ago I was talking to a British surveillance professional on Compuserve who told me "this work costs a lot of money and is usally because the person I am following has done something (usually criminal) to warrant all this money and time being spent." Yet in this particular case it is plainly not the "victims fault" that the harassment is taking place. The hate-campaign against me is completely the creation of the obsessive psychologies of the MI5 agents who have made themselves my persecutors; it is obviously a "personal" campaign for them, and for years they misuse taxpayer funding to feed their insane, unnatural and fixated fantasies.

Four Years of "MI5 Persecution" Posts on Internet Newsgroups

For approximately the first three years of the MI5 persecution, from June 1990 until late 1992, I kept as quiet as possible, in the hope that by not reacting, MI5s interest in me would decrease and they would simply go away of their own accord. This is the sort of behaviour some people employ against bullies; if the bullies arent getting a reaction, then they might simply go away and victimize someone else.

Unfortunately, this tactic didnt work. The quieter I became, the more shrill and hysterical the noise from the Security Service operatives. For about two years I didnt watch TV news at all. Yet this only heightened their obsessed fixation; they continued to follow me wherever I went, they

continued to induce harassment at work by managers and fellow workers, and they continued to encourage me to commit suicide. They seemed to regard my refusal to react as a crime which they would have to "put right" by ever more extreme forms of abuse.

Finally, in 1995, I changed tactics radically. Since late 1994 I had had accounts with internet providers in Ontario, Canada. I discovered the cornucopia of internet newsgroups, on every topic from consumer electronics, to politics and legal topics, and I discovered online services such as Compuserve and AOL. In May 1995, I made the first posting to the conspiracy newsgroup, on the subject of "BBCs Hidden Shame".

BBC's Hidden Shame

The internet newsgroup discussion, which has now reached its fourth anniversary, started with an article in alt.conspiracy, which I reproduce here.

Date: Thu May 4 18:27:24 1995
Newsgroups: alt.conspiracy
Subject: BBC's Hidden Shame

Remember the two-way televisions in George Orwell's 1984? The ones which watched you
back? Which you could never get rid of, only the sound could be turned down?

Well the country which brought Orwell into the world has made his nightmare follow into
the world after him. Since 1990 the British have been waging war against one of their
own citizens using surveillance to invade privacy and a campaign of abuse in the transmitted media in their efforts to humiliate their "victim".

And the most remarkable thing about it is that what they do is not even illegal - the
UK has no laws to protect the privacy of its citizens, nor does it proscribe harassment
or abuse except in the case of racial abuse.

A lot of people in England know this to be going on, yet so far they have maintained
perfect "omerta"; not a sound, not a squeak has escaped into the English press, and for
all the covert harassment absolutely nothing has come out into the public domain.

Have the British gone mad? I think we should be told

At this point, I did not name MI5 as my persecutors. I was still unsure that they were the ones responsible for the "psychological terrorism". In followup posts however I did name them; and the persecutors have never denied the claim; so I think my guess is valid. (The Security Service Tribunal in 1997 have said "no determination in your favour was made", but it is a well established fact that MI5 lies routinely to the Tribunal

which has never found in favour of a plaintiff, so no conclusions can be drawn from this.)

This first post was made to alt.conspiracy, but further posts were made to the UK-local newsgroups, in particular uk.misc but also uk.legal and uk.politics (which is now called uk.politics.misc). Some time ago I tried to take the battle to the Compuserve forums, UKPOLITICS (which is now called UKCURRENT - current affairs), but my articles were censored by the forum operators. Such censorship is impossible on the internet newsgroups.

Police Refuse to Act

I have complained several times to the Metropolitan Police, who have each time refused to help.

From: Green <Green@guidion.demon.co.uk>
Newsgroups: uk.misc,uk.politics,alt.politics.british,soc.culture.british
Subject: Re: MI5 Persecution: Why Aren't the British Police Doing Their Job?
Reply-To: Green@guidion.demon.co.uk
Date: Sun Apr 7 21:13:30 1996

In article <DpIE0r.736.0.bloor@torfree.net>
           bu765@torfree.net "Mike Corley" writes:

>Last Easter (1995) I went into the local police station in London and spoke to
>an officer about the harassment against me. But I couldn't provide tangible
>evidence; what people said, in many cases years ago, is beyond proof, and
>without something to support my statements I cannot expect a police officer to
>take the complaint seriously.

This in itself dos not suggest that the police have it in for you. The old bill operates on extremely tight spending limits forced on them by that pillock Michael Howard, and without evidence, they often have higher priorities than chasing something
that cannot go to court.

I doubt that the police are actually being leant on, but they probably realise that if
they looked into this, they would be leant on hard. The met always stays away from anything that looks like it has Defence, Security or secret service interest already,
because they realise that they are below these government agencies in the general pecking order.

If I walked into my local nick and complained that MI5 were snooping on me, they would
show me the door without even looking at my evidence, because that bored desk seargant
with only five years to go before he retires doesn't want to start fucking about with
somebody who has incurred the wrath of Stella Rimington. He would rather deal with the

lost dogs and driving licence producers, eat his cheese and pickle sandwiches and piss
off home at the end of his shift than have some high ranking spook having a go at his
boss and getting him a bollocking.

In short, you have earned much sympathy but little surprise. Just remember that saying
about the enemy of your enemies.

Most recently, I wrote in March 1999 to Charing Cross Police Station
CID. They did not acknowledge or reply to my letter. When I phoned them
up, the detective Id written to treated me to a sadly not unusual display
of police bigotry, with an uneducated rant about "your paranoid rubbish".

It would be nice to think that such uneducated bigotry is something other
than wholly typical of police behaviour, but unfortunately that is an
illusion that is rapidly dispelled.

Uncorruptible Jon Snow of Channel Four News

From previous articles the reader will know what I think Jon Snow has
recently been watching me while he reads Channel Four News in the
evening. Recently I digitized a few moments of one such broadcast, where
his face twists into a smile, without there being anything in the news
broadcast to cause merriment. Here is a usenet post from some time ago on
MI5s "bought and paid for" tools in the so-called "free" press.

Peter Harding (harding@ermine.ox.ac.uk) wrote:
: I was at speakers' corner on Sunday. There was one chap who was bellowing
: about something or other, I don't know what, but one thing he said to
: someone caught my ear:

: "BBC, MI5, same thing."

Can't disagree with that sentiment.

Wasn't it documented that MI5 sometimes "bought" journalists and broadcasters?
I remember reading a report by some jouralist who had been offered an extra
tax-free income by MI5 to become their covert mouthpiece, and had refused.
.....
> : >mouthpiece, and had refused.
> :
> : It was Jon Snow of Channel 4.
>
> Was it reported in any of the papers?

It has been reported several times. The most recent was in Private Eye,
a few months back. As I recall they also wanted information from him;
journalists would be a natural choice for members of the Security Service
and the Secret Intelligence Service for information sources.

> It might be interesting to see what he had to say regarding their
> attempt to recruit him.

He was most concerned that many others would have accepted such an
offer. However, we can probably make an educated guess as to some of
those who accepted: Nigel West (Rupert Allason, MP) and Chapman Pincher
would come near to the top of the list.

Corrupt Security Service agents steal millions from taxpayers

Money is of course a factor in the grand equation which is the MI5
persecution. It costs money for the Security Service to "buy" people in
the media etc. But that is only a small part of their expenditure of
taxpayers resources. Most of the expenditure is directly on the salaries
if the agents involved; and in this post I put forward the theory that MI5
are trying to draw out their involvement for as long as possible, very
cynically, to maximise their income and line their own pockets.

At each stage they have tried to pretend that I am something out of the ordinary.
Either I was very stupid ("he's an idiot") or very clever ("he's like a genius").
Either I was a threat to Western civilization (Levin once referred to me as the
next
Hitler) or I was completely defenceless ("a soft toy").

Now, it should be obvious to any person with common-sense that I am not out of the
ordinary in any way. I have an IQ which is average for the Web, I am racially
white
European, and there are plenty of other people with schizophrenia or epilepsy out
there
who haven't been targeted for MI5 attention, so why me?

I think the answer is that the MI5 agents who harass me have cynically exploited
the
situation by painting me as extraordinary in order to assure themselves of well-
paid
employment funded by the ordinary British taxpayer. To put it bluntly, they are
stealing millions of pounds from the taxpayer to feed their own pockets.

This assertion is supported by the observation that it's the same agents who are
doing
the harassment. Six months ago in a local hospital I was harassed by someone whose
face
I had seen (he had stared straight at me aggressively, at the time I just thought
it

was some nutter but it turns out he was one of "them") aboard a KLM flight a couple of
years ago. It's presumably been the same people most of the time. I've seen the way
contractors act when they don't want their positions terminated. Would these agents
really want to lose their well-paid employment harassing me? Presumably they are
promising their bosses a "breakthrough" (ie my demise) real-soon-now and have been for
the last seven years, while all the while these MI5 agents skim millions
off the taxpayer.

I wouldn't mind a job like that. Perhaps if I persecute myself a little bit, like
standing in front of a mirror and shouting mindless obscenities, do you reckon I'd get
a slice of the caky Service Tribunal. This year Nick Brooks, current
Tribunal Secretary, confirmed to me that he could not think of a single
case where the Tribunal had found in favour of a complainant. Here is my
usenet post from two years ago.

Subject: MI5: "It wasn't us"
Newsgroups: uk.misc,uk.legal
Organization: Toronto Free-Net

"The Security Service Tribunal have now investigated your complaint and have
asked me to inform you that no determination in your favour has been made on
your complaint."

Signed ER Wilson, Tribunal Secretary

Well that's a relief then. All that spamming for nothing eh. Gaw blimey, if
they say they're not doing it then it can't be them, can it?

In a recent letter to Mr Brooks I expressed the opinion that the Tribunal
were unable to fulfil their responsibilities in the face of MI5
falsehoods. Nevertheless, I do intend to make another complaint to the
Tribunal in the near future, despite the Tribunal appearing to be a
toothless watchdog.

Discrimination against a Unit Minority

MI5 have been very clear in their instructions as to what I should
do. They have openly shouted at me the word "suicide", and also from the
other abuse it is clear that they want my existence terminated.

This point is covered in more detail in a previous article. The following
post describes the xenophobic nature of MI5s campaign against me. They
have refined their bigotry down to a unit minority, yet they make use of
the discrimination against the mentally ill which is a feature of current
British society.

>Indeed. If you've ever had a 'conversation' with someone suffering
>from florid schizophrenia, you'll know how difficult it can be to
>'argue' with them.

I don't have florid symptoms. But I'm in a difficult situation, because those people who don't know, aren't going to believe, and those who do, they just go along with the crowd. It's never a good idea to go against the grain, and the grain here is defined by interests in the establishment and the media. Even people who could say out loud what was happening won't, because then there's a risk that they'll be seen as traitors and ostracised.

Usually this type of 'hidden abuse' is racial and targetted at a racial minority within a country. You keep the minorities out of the good jobs, but you don't admit discrimination exists. It happens everywhere, not just in Britain. The persecution that is going on now is in reality a refined form of racism. Instead of "nigger" it's "nutter", and abusing the mentally ill is still socially acceptable today. In 50 years it might not be, but today there isn't any social or legal sanction against it.

So really they've refined racial harassment down to a minority of one. The words may be different, but the methods are the same.

MI5 Persecution: BBC Newscasters Lie & Deny They're Watching Me

Central to the persecution campaign waged against me for some nine years now by the Security Service is their use of the media, and in particular the broadcast media, to make clear to me that I am under surveillance and being watched within my own home, even by BBC newscasters while they read the news. This is really an act of arrogance; MI5 and their tools in the television and radio are so sure that they can never be caught, that they have many times made explicity clear on broadcast programmes that they are as capable of seeing me as I am of seeing the broadcast pictures. Even when they have known I am taping the programmes they still carry on this practice; for examples of TVand radio presenters caught "in action", see the Evidence area of my website.

If you wish to reply to this article......
then please include your name and fax number! I provide the means for recipients to send me their thoughts on the topics discussed, but ask that you provide me with your fax number or email address if you require a response. Also would you please send not more than one or two pages, if by fax. Thank-you!

It started with a Newscaster, and it continues with Newscasters today

The very first incident in the story started with a reaction by an ITN newscaster, Sue Carpenter, in June of 1990, almost nine years ago now. She reacted to what she saw in my living room at home as she read the news. My mother had brought an apple for me into the room, whereupon the newsreader smirked and giggled, apparently finding this funny. I couldn't believe what I was seeing. I carried on watching news and other television programmes to see if presenters would show signs of "interactive watching"; to my surprise, this happened again and again. Unfortunately, I did not have my wits sufficiently about me to videotape these programmes, and it is now almost impossible to obtain recordings dating back to 1990.

However, I have been busy recording everything Ive watched the last couple of years, and the taping has yielded some nuggets, which you will find if you point your Web browser at the "evidence" area of my website, whose URL

address is given above. Strangely it is not particularly the BBC who are "after me" at the moment (with the exception of occasional fire from Nicholas Witchell), but that supposed paragon of virtue and decency Jon Snow of Channel Four TV News (he actually works for ITN), who once claimed hed turned down MI5s offer of a tax-free salary. I will cover Snows recent actions in a future article.

BBCs Hidden Shame

The first ever Usenet post (internet newsgroup article) on the subject of the MI5 bugging / BBC watching occurred, as stated in a previous article, in early May 1995. It is reproduced here;

Date: Thu May 4 18:27:24 1995
Newsgroups: alt.conspiracy
Subject: BBC's Hidden Shame

Remember the two-way televisions in George Orwell's 1984? The ones which watched you back? Which you could never get rid of, only the sound could be turned down?

Well the country which brought Orwell into the world has made his nightmare follow into the world after him. Since 1990 the British have been waging war against one of their own citizens using surveillance to invade privacy and a campaign of abuse in the transmitted media in their efforts to humiliate their "victim".

I suppose "BBCs Hidden Shame" is more of a wish than a fact. It may be hidden, but the BBC and other media and security organisations seem to have no shame whatever in their anti-social, not to say criminal, actions. Nor do the general public, who seem quite happy to parrot the vilest obscenities without much hesitation or apparently thought.

Martyn Lewis, Nicholas Witchell and the rest

Most of the harassment occurred in 1990-92, when I wasnt making any recordings, and the BBC wont release copies of current affairs programmes from that period.... so although I can remember there were many incidents in that time, even many specifics, I cant dig up the actual programmes to flesh out the bones.

This year, there has been at least one incident with Nicholas Witchell as newsreader, which I have successfully recorded and digitized, i.e. converted into a computer Quicktime movie file. This has not yet found its way onto my website (Im a busy man, dontcha know) but you can be sure I will let the readership of these articles know when that clip makes it onto the web. The Witchell clip was recorded on Saturday 10 April 1999 at 7pm, and shows Witchell trying to restrain his features from collapsing into a smirk. First his upper lip quivers for several minutes, then with the non-excuse of a non-joke his entire face twists into a grin. It looks as if he finds me so funny, that he allows himself to submerge any pretence at professionalism in a sea of MI5-inspired sarcasm and harassment.

The two BBC newscasters whose reactions to me I can remember most vividly over the years are Martyn Lewis and Nicholas Witchell. I can remember thinking years ago that Michael Buerk was also seeing me at home; and if the other two are watching then there would be no reason why he wouldnt be doing the same; but in all honesty I cannot remember a single clear instance of his reacting through facial or verbal expression to me.

I can remember several instances of Martyn Lewis reacting to what he saw of me, however. In early 1992 I was watching the BBC news with Lewis on a small black-and-white portable TV at my then home in Oxford. I threw a term of abuse at Lewis; he flinched, then gave a grin and made a comment from which I understood that he had been on my side, but might have changed his mind as a result of what Id just said to him.

And in spring 1991 I remember Martyn Lewis clearly reacting to what he saw of me at my then accommodation in Woking, Surrey, by continuing to stare at some fixed point near the camera after the news had finished - presumably this is where the monitor interactively showing pictures of my room was located.

Why would BBC and other Newscasters Watch and Harass Me, Watching Them?

This is a very difficult question, and I dont actually know the answer. It is a matter of record that the Secret Services are very much part of the Establishment. The recent exposure of the "MI6 Agent List" on the internet, and its coverage in the newspapers, reveals how much MI5 and MI6 are recruited from the ranks of the Establishment. Obviously the relationship is bi-directional; the Establishment influences MI5/MI6, but the secret services (well, perhaps not so secret now we know who works for MI6!!!) also influence the machinery of power and information dissemination i.e. media in this country. So they must have a lot of covert leverage with the BBC and ITN.

Some of this leverage is obviously through bribery. It is a matter of record that MI5 tried some years ago to "buy" Jon Snow of Channel Four TV. He turned them down - obviously they must have approached other media people as well, and from the lack of other reports of people turning them down, it may be presumed that some other journalists will have accepted the sugared carrots put before them. Ironically, Jon Snow has been taking part in the recent "watching" actions against me - but why he has allowed himself to be used by the secret services is something which I do not know.

Perhaps the Security Service uses blackmail to twist arms of journalists into co-operating with them? I have always thought there was something slightly odd about Martyn Lewiss demeanour. At the time of the Ron Davies "rough trade" scandal it was reported that MI5 had known all about Davies predilections and the sham of his pretence to be a happily married man. Perhaps MI5 have been able to dig something up from Martyn Lewiss private life to blackmail him into acting on their behalf? And if there wasnt anything before the "newscaster watching" started then there most certainly is something now.... once theyve started watching, the

newscasters will surely wish their activities to remain covered-up, and co-operate with the security service.

"Newscaster Watching" Deliberately Constructed to Mimic Schizophrenia

Presumably this is the first case in history of television journalists actually taking part in acts of real-time, live spying and reacting against one of their viewers. What you have to understand, though, is that I was quite mentally healthy in June 1990, certainly relative to November 1992, when after two and a half years of harassment I was finally admitted to hospital as an out-patient. MI5 decided from the outset that they would make me mad; they constructed the media harassment to resemble what would be reported by a person with mental illness; and then they carried on years of abuse to inflict on me the condition which they wished to use as an excuse to cover up their abuses.

I sold my portable TV in autumn 1990 and stopped watching television regularly. I realise now that this may have been a mistake. What I should have done was to watch TV and listen to the radio, but tape-record everything and make a note of what each excerpt meant to me. I would then be in a much stronger position as regards to evidence that I am now. That is what I am trying to do now, but unsurprisingly the TV/radio presenters have stopped getting at me, now they know they are being recorded.

When I started publicising my case on internet newsgroups in 1995, I was met with the disbelief one might expect to be accorded to a mentally ill person who talks about "newscaster watching" and media persecution. Some newsgroup participants thought I had started a "troll", an invention made to obtain a reaction; one bright spark even suggested a group of psychology students were behind the articles. But most people thought the articles were symptomatic of derangement - and that is exactly what MI5 want people to think. MI5 chose me as a target because I was mildly mentally ill at the outset in 1990, although I stress my illness then was very mild in comparison with November 1992, and because they knew that enough abuse would (a) make me much more seriously ill, and (b) once I was more ill, they would "get away" with a harassment deliberately constructed to look like the symptoms of paranoid schizophrenia.

Martyn Lewis Denies & Lies, But Wont in Writing

In February 1997 I wrote to BBC Viewer & Listener Correspondence and asked them to investigate the claim that their newscasters had engaged in "real-time spying" on me. They replied that they had asked Martyn Lewis and Michael Buerk whether they had engaged in such practices, and that they had both made verbal denials to VLC, but were refusing to put their denials in writing.

To me it looks as if Lewis and Buerk are happy to lie verbally but not in writing, because written falsehoods would place them unambiguously in the wrong, whereas they can try to talk their way out of verbal lies if they are ever caught, or perhaps even deny the verbal lies completely? If they lie without shame, then why would they have any shame about future lies about lying?

BBC-VLC also said that the BBC "would never engage in any form of surveillance activity" such as that described. Clearly Martyn Lewis and the rest have lied to their own organisations personnel about their criminal actions. So much for the "objective", "truthful" BBC, a nest of shabby liars.

Summons against the BBC, for Nuisance caused by Newscaster Spying

In March 1997 I issued a civil summons against the BBC, seeking injunction against further "newscaster spying", and token damages for what the BBC had done to me until that date. The purpose of the summons was to try to "smoke out" the BBC, since obviously I did not have good evidence which would be necessary for either a civil or criminal case to be made against them. My summons was worded as follows;

1. The plaintiff is and was at all material times residing at [home address]. At some time prior to or during June 1990, persons of unknown identity entered Plaintiff's premises and installed concealed television equipment in said premises.

2. A campaign of harassment was launched against the Plaintiff by the persons of unknown identity, which in part took the form of instigating harassment by BBC TV newscasters (including specifically Michael Buerk and Martyn Lewis) as they read news bulletins, by making direct and personal comments to Plaintiff.

3. The campaigns purpose was to subject Plaintiff to great mental stress and induce mental breakdown. As a result of it Plaintiff did indeed suffer from severe mental strain in 1990-97.

4. In order to avoid the mental strain being caused to him the Plaintiff has been compelled to stop watching BBC TV news. Defendant therefore committed the tort of private nuisance, since normal use of home was interfered with.

5. Plaintiff claims a permanent injunction prohibiting further nuisance, and damages for nuisance suffered limited to 5,000.

Naturally, my attempt to smoke-out the BBC and its lying newscasters failed. The BBCs litigation department sought to have my summons struck out; and they succeeded in doing so, on the grounds of my action "disclosing no reasonable cause of action". I was also prevented from issuing further civil claims against the BBC without leave of the Court. Apparently litigants-in-person frequently / usually have their claims struck out with this wording, regardless of the merit of their claims.

BBC Suppresses my Claims of "Watching by Newscasters"

BBCs staff magazine Ariel ran my advert "BBC Newsreaders Spying on my home" for one issue in the Personal category on 8/July/1997 before it was spotted and axed by editor Robin Reynolds; please see

webpage; http://www.pair.com/spook/evidence/plaint/ariel.htm
Clearly the BBC will not allow claims of its wrongdoing to be made public in the media channels it controls.

On several occasions people said to my face that harassment from the TV was happening. On the first day I worked in Oxford, I spent the evening in the local pub the Rose and Crown with the company's technical director Ian, and Phil, another employee. Ian made a few references to me and said to Phil, as if in an aside, "Is he the bloke who's been on TV?" to which Phil replied, "Yes, I think so".

The reader might think that mere "watching" by newscasters etc might be a relatively benign happening. But it is not; it is part of MI5s framework of harassment and lies. On many occasions the reactions of the BBCs newscasters to me has been in the nature of sarcasm, implicit contempt and abuse. This is visible in Witchells news programme mentioned above, where he engages in abuse by laughing at me during his newsreading. It was particularly visible in the early period of 1990-92, and as late as Autumn 1993, when during a Newsnight broadcast Jeremy Paxman interviewed a football person about soccer hooliganism, and the interviewee gave vent to an unsubtle rant about "theyre idiots, theyre just idiots, keep up the surveillance". Paxman started grinning, showing he understood and was taking part in the abuse being perpetrated on that programme.

Conclusion

The MI5 Persecution started with harassment by television newscasters, and today harassment by TV and radio presenters still forms a key part of MI5s activities against me. When this business started in June 1990 I was in relatively good health of mind. Years of persecution by the secret police and their mouthpieces in the state-run BBC and other media eroded my health until MI5 achieved their aim of seeing me rendered mentally ill in November 1992. The diagnosis which was forced on me unfortunately and ironically meant that my reports of the harassment are disregarded, because the mentally ill are second-class citizens in todays Britain.

Yet TV and radio harassment continues, albeit in a reduced form, despite my taping all the programmes I watch, resulting in my being able to obtain and demonstrate objectively on the website instances of media presenters attacking me. Unfortunately these recorded instances are quite tenuous; I might understand them, the presenters understand what it is theyre doing, but despite many thousands of people knowing the truth of the "newscaster watching", the omerta continues and they continue to refuse to admit the truth of the matter. It is a terrible indictment of British society that there is not even one decent person willing to speak out. I look forward to the day when the truth does finally emerge, and the mass corruption which has allowed the MI5 persecution to take place is finally purged and the Establishment criminals caught and appropriately punished.

MI5 Persecution: Molestation during Travel

MI5s persecution of me varies in intensity. Since 1990 it has been steady for perhaps 80% of the time; there was a notable quiet period in 1993, and another quiet period in Jan-Feb 1995, as well as a hiatus in the first two months of 1999. It puzzles me that they cease and restart, seemingly without any logic or reason. But one aspect of MI5s activities against me which is relatively predictable is this weeks articles topic, which is Molestation during Travel. Almost every time I cross the Atlantic, go to the Continent or even try to enjoy a holiday in this country, you can bet that MI5 will be there doing their utmost to wreck it all.

This aspect of the harassment is particularly relevant as I will be travelling to Europe again in a months time, with naturally the Minidisc recorder in tow; so it will be interesting to see if I can record the abuse which will almost certainly take place, either on the Tube going to the airport, at the airport, on the flight, in the terminal building - MI5

have previously instituted instances of abuse at each of these locations, so well see how much taxpayers money they waste this time, and whether it will prove possible to capture their abuse on minidisc.

Read about the MI5 Persecution on the Web

June 1992 in Polands mountain resort of Zakopane

The persecution started in June 1990, and for the first two years I stayed in the UK apart from a couple of brief day trips to Calais. By the summer of 1992 Id had enough of being cooped up in England with abusive fellow employees egged on by an abusive secret police service, and decided to spend 10 days in southern Poland, on what was intended to be a holiday at the mountain resort town of Zakopane.

Unfortunately the psychopaths of the Security Service were not willing to allow me to enjoy a holiday in peace and quiet. The journey to Zakopane was by coach from the meeting point at Londons Victoria coach station (National Express) followed by ferry followed by another coach across Europe. As we left Victoria a youth and his girlfriend started a loud tirade of abuse directed at "this bloke", where the "bloke" was never named, but it was very clear that the "bloke" was myself. The youth said "they" had "found somebody from his school, and he was always really stressed at school, a real psycho". Again, the label "they" was not elaborated on, but it was clear that "they" = the persecutors from MI5. The boy also said, "he was in a bed and breakfast for only one night and they got him". By a not unexpected coincidence I had been in a B&B in Oxford a week previously, which had been booked from work; other things lead me to the conclusion that the company's offices were bugged for most of the 2 1/2 years that I was there, so "they" would have known a room in the B&B had been booked. After a few minutes of this I went back to where they were sitting and asked where they were travelling. The boy named a village in France, and the girl's giggling suddenly ceased; presumably it permeated to her brain cell what the purpose of the boy's abuse was.

It is now very clear to me that MI5 were trying to have me incarcerated, assaulted or killed on this trip across Europe. The degree of verbal violence inescapably leads to this conclusion. When we arrived at our destination, it became clear that many people, both in our tour group and its guide, and among the ordinary residents of the town, knew there was a movement under way to "get" me. MI5 employed many people and significant resources for an action which they knew would only take a maximum of ten days. A commercial operation would never have felt able to waste such resources on such an unproductive and temporary action; only a state-sponsored, taxpayer-funded entity like the Security Service would be able to be so wasteful.

To give some examples of what happened in those ten days; I was walking in some woods outside the town, when a Polish woman, looking at me, said the English "shit" in a strongly Polish-accented voice. For the first three years 1990-92 MI5 had been trying to force this word on me. Another example; I was walking near my "hotel" when a mother said laughing to her child, "a wiesz ze to prawdziwy wariat" which means "you know hes a real

madman". And the "TV reacting" happened there too; on Polish TV, a bemused looking journalist said to another, "to jest sprawa Anglikow", which means "its the concern of the English", in other words, none of our business, despite what the English are trying to force down our throats.

Just before we left for home, I went with some others from our group to a nearby bar. There a man shouted at me the same sexual obscenity which MI5 have constantly thrown at me these last three years. I think MI5 try to justify their various terms of abuse by repeating them at me until I say them, either while conscious or while talking in my sleep; and then they seize on my saying those words to "prove" that the obscenities are "my fault", et cetera. This rather stupid reasoning of theirs can actually be seen as indicative of the psychopathic condition attributed to them in a previous article; blaming the victim for the crime you inflict on him is how psychopaths think.

Nor did the persecutors let up during the return trip. Returning on the ferry over the channel, a rather insalubrious-looking guy talked to his mates about "and you know this bloke, hes really mad you know, hes really mad". On the National Express return coach to London, a group of five or six young people started shouting at me. I slumped in my seat and tried to avoid presenting a target, so they got ever more strident - "whats the matter with you, cant you hear us?" One of the other people who had been on the trip to Poland asked them why they were shouting at me, and they said, "hes been to Cambridge", to which the co-holidayer asked them, "have you been to Cambridge?" presumably thinking they were aggrieved fellow students, but they answered "no". Even after I left the coach at Elephant and Castle abuse continued; in the tube station, two kids started throwing abuse at me; one of them said to the other, "and you know he works?" to which the other answered "yes".

Immediate Aftermath of November 1992

As you will know from previous articles, my manager at OCG - ARIS/Oxford, Mr Mitchell, induced a mental breakdown in me in the months leading up to Nov/92. The diagnosis was regarded by the persecutors as a victory for them, because few if any people give credence to allegations of harassment when they are made by somebody suffering from schizophrenia. There is also a bias against the mentally ill, an "institutionalised bigotry" in society comparable to the institutionalised racism against blacks.

However, MI5 did not let up on persecuting me following Nov/92. In December 1992 I flew by charter jet to Alicante in Spain for two weeks recuperation. MI5 planted one of their people on the flight, a youth who tried to start some noises that "hes a nutter". One of the other passengers replied, "oh hes a nutter is he? oh well!" and the youth shut up and said nothing for the rest of the flight. I think it would be fair to say that the youth on the flight was embarrassed by what he had been asked to do in making the flight "uncomfortable" for me; he sounded defensive rather than aggressive.

My first trip to Canada in June 1993

Ive already covered this in a previous article so Ill just give a brief summary here. On 10 June 1993 I flew British Airways from Heathrow to Torontos Pearson Airport. On de-planing from the aircraft, one of a group of four fellow passengers looked at me and said, laughing, "if he tries to run away well find him". It was quite obvious that these four men were the ones who had been harassing me since 1990.

I did nothing to apprehend them or bring this incident to the attention of the airport authorities, mostly because this was my very first visit to Canada, and the last thing I wanted was to get into a dispute before I had even finished disembarking. In retrospect, I can see this was a terrible mistake; I should have made every effort to detain and identify these people.

Subsequently I have made numerous attempts to obtain the names of these people from British Airways passenger lists, by talking to BA, through a lawyer in Ontario, through a solicitor in England, through the UK police, and also through private detectives in the UK. But all my efforts have come to nothing. BA have told me they keep passenger lists for a period of seven years, so they will still have the list for this 1993 flight. I did not see or hear anything during the rest of my visit to Ontario in 1993 which would have lead me to believe that I was being watched or followed.

Journey across Canada in summer 1994

As I think Ive already said in previous articles I emigrated to Canada in late May 1994. For six weeks between late May 1994 and early July 1994 I travelled across Canada from coast to coast, starting in Toronto, visiting various cities and ending up in British Columbia. I saw this both as something of a holiday, and the chance to get to know a little better my adopted country.

As you can guess, MI5 followed me everywhere I went during these six weeks. In Toronto, where I started this trip in late May, I was spoken about by one youth to another with the words "hes an idiot", to which the other replied, laughing sympathetically, "good luck to him".

A couple of days later I went to Montreal and stayed at the YMCA downtown. As you can guess (this is all so predictable, isnt it?) MI5 followed me there and bugged my room at the YMCA. Not only that, but they managed to set-up an instance of "newscaster reaction" from a local television station; while I was watching a Vermont TV news programme on the set in my room, the woman reporter said, "well theyre just tired and they want to go home", which sounds like a pretty unprofessional thing to say until you realise she was trying to say of me that I was the one that was supposed to be tired, and they (ie MI5) wanted me to go home to the UK.

On the bus journey across the North American continent, it was quite clear that MI5 were following me every step on the way. For the first part of the journey they actually put someone on the bus with me, a youth who said at me "that guys paranoid" and tried to incite other passengers to attack me. I stopped for a couple of days in Winnipeg in central Canada, and on

leaving the town heard on the radio a female presenter ranting about "insanity! insanity!". It is very tiring travelling such a long distance by bus; I took the journey in two steps, each of about 36 hours; and it is especially tiring when you know MI5 are watching you and harassing you every step of the way.

When I finally got to Vancouver, MI5 instituted the usual harassment, in very short order. I was surprised how quickly they were able to induce hatred towards me in elements of the general populace; the Security Service must have employed a number of agents and serious resources in a very short period of time; and for no real gain, because I havent been back to BC for almost five years, so all their "work" appears to be for nothing. In downtown Vancouver a street person said in front of me, "theyre all talking about him". For a few days I was staying at Pauls Guest House (345 W.14th Ave); on the day I left, the owner Paul shouted at no-one in particular, "hes going to Victoria" - which was quite accurate, I was indeed going to the provincial capital Victoria on Vancouver Island. But I had not told anyone at the guest house where I was going; I had only mentioned to my parents back in England on the phone that I was going away from Vancouver for a few days. Which leads me to suppose that MI5s bugging of the phone in my parents house yielded the "intelligence" that I intended to visit Victoria, and they had passed the information on to Paul.

When I got to Victoria it was again obvious that the persecutors were "doing their stuff" there as well. On the street I was identified as being English, although I had not said anything so my accent hadnt given me away; and returning by ferry to the mainland, I was abused by a Canadian woman who said, "hes a nutter! you can run but you cant hide". During my years in Canada I have never heard the word "nutter" on any other occasion; I do not think it is part of Canadians vocabulary; so the Canadian woman on the ferry, who was obviously talking about me, must have been supplied with this word by the English persecutors. And once I got back to Vancouver, staying at the Austin Hotel on Granville St, I listened to a conversation in the apartment block directly opposite, and a man saying, "hes paranoid, so thats as bad as it can be, so why are they doing this to him?".

Holiday in the States, August 1995

By 1995 I was living in Canada, and in August I went down the eastern seaboard to Florida and as far as Key West by car. As you can guess (this is all so boring and predictable, isnt it?) MI5 followed me every step of the way. I can see in retrospect that this must have been quite easy for them as they had my car bugged, both on the inside to listen to anything that was said and what radio station I was listening to, as well as what must have been a tracker device installed to track it across long distances.

The first city I visited was Philadelphia. In the old Congress Hall where the first US Congress assembled, the woman guide started referring to my situation, saying that "all these people in Europe were watching it", and they were "a little paranoid" at this 18th-century experiment in

democracy. Also I had recently written a newsgroup post where Id described a (female) poster as "wet-nosed" (implying "canine"), and a young girl in Philadelphia remarked, "so he thinks were dogs?" There were two or three more incidents during this holiday in the eastern States, including a radio station down near Miami, showing "they" had tracked me all the way there, and were bugging the inside of my car; but I didnt record the details and Ive forgotten some of it now. Also down in Miami Beach a French tourist in a lift expressed support for me with the words, "cest incroyable" ie. its incredible, meaning that MI5s well-known actions against me were beyond belief.

To go back a bit, in about May/June 1995 Id visited New York, again by car, and was insulted several times by people using the same words that had been used against me in England. In Central Park, and elderly Englishman (not a real gentleman - but then the Engish view of themselves as "gentlemen" etc is quite laughable) looked at me and said "idiot". And while I was eating in a streetside restaurant a New York youth started laughing and said something like, "I cant believe it, hes actually here" - I think that was because I had had an expressed wish to visit New York for some years before this, although after this visit I wont be going there again for a very long time.

Visit to Poland December 1995/January 1996

In December 1995 I flew (BA again, unfortunately - every time Ive flown BA one of these incidents has happened, presumably MI5 is happier setting up harassment on British-domiciled carrier) from Montreal to Berlin and travelled on to Poland to visit family. MI5 naturally harassed me in Poland during my brief stay. They followed me around and got Polish people to take part in the harassment. In one case two Polish youths talked in front of me saying in English (with marked Polish accents), "fucked up men, fuck you". There were also other incidents which I dont remember too clearly since it was some time ago.

The return flight connected through Heathrow, and in the transit lounge MI5 again set-up harassment against me. In Poland they were talking their abuse in English, and in London they set Polish people after me to speak in Polish; they heard me on the phone to my father, and said "a wiesz ze to Polski wariat", in an almost sympathetic, inclusive fashion (translation. "you know hes a Polish nutter"). Once on the flight to Montreal I was again set upon by two English youths, one of whom spoke and the other listened. The aggressive "fat bastard" youth said, "if he wants to be a wanker" (its my fault theyre harassing me, you see), self-justification that "hes a nutter" (so we have to keep on abusing him, because hes ill), as well as talking about the town in Poland where I had been staying. He also said, "he doesnt know who we are", but as already remarked in a previous article, that was at best a half-denial of my guess expressed in internet newsgroups that the people after me were MI5 - if anything its a half-confirmation rather than a half-denial.

These incidents are still going on. You can hear digitised audio files of abuse on a BA flight to Berlin in 1998 on the Web at address

On this flight they were again attacking my mental health; "paranoid, hes paranoid" and "nutter" are discernable. The last "during travel" contact was at Ottawa Airport on 21 July 1998, when "Alan Holdsworth" the psychopath MI5 agent, dressed as a vagrant, was pacing aggressively in the departure area. In three weeks I will again be travelling to Europe; we will see what fresh acts of molestation MI5 perpetrate during this trip.

MI5 are Afraid to Admit They're Behind the Persecution

MI5 have issued a formal denial of any involvement in my life to the Security Service Tribunal, as you might expect them to; but, more importantly, the persecutors have never denied that theyre from the

Security Service, despite several years of accusations from my corner on usenet and in faxed articles. I am not surprised that the Security Service Tribunal found "no determination in your favour". I am however a little surprised that the persecutors have refused to confirm my identification of them; by doing so, they implicitly admit that my guess was right.

"No determination in your favour" says the Security Service Tribunal

In 1997, I made a complaint to the Security Service Tribunal, giving only the bare outlines of my case. I do not think it would have made very much difference if Id made a much more detailed complaint, since the Tribunal has no ability to perform investigatory functions. It can only ask MI5 if they have an interest in a subject, to which MI5 are of course free to be "economical with the truth". A couple of months after my complaint the Tribunal replied that;

The Security Service Tribunal have now investigated your complaint and have asked me to inform you that no determination in your favour has been made on your complaint.

Needless to say this reply didnt surprise me in the slightest. It is a well established fact that the secret service are a den of liars and the Tribunal a toothless watchdog, so to see them conforming to these stereotypes might be disappointing but unsurprising.

It is noteworthy that the Tribunal never gives the plaintiff information on whether the "no determination in your favour" is because MI5 claims to have no interest in him, or whether they claim their interest is "justified". In the 1997 report of the Security Service Commissioner he writes that "The ambiguity of the terms in which the notification of the Tribunals decision is expressed is intentional", since a less ambiguous answer would indicate to the plaintiff whether he were indeed under MI5 surveillance. But I note that the ambiguity also allows MI5 to get away with lying to the question of their interest in me; they can claim to the Tribunal that they have no interest, but at a future date, when it becomes clear that they did indeed place me under surveillance and harassment, they can claim their interest was "justified" - and the Tribunal will presumably not admit that in their previous reply MI5 claimed to have no interest.

"He doesnt know who we are"

In early January 1996 I flew on a British Airways jet from London to Montreal; also present on the plane, about three or four rows behind me, were two young men, one of them fat and voluble, the other silent. It was quite clear that these two had been planted on the aircraft to "wind me up". The fat youth described the town in Poland where I had spent Christmas, and made some unpleasant personal slurs against me. Most interestingly, he said the words, "he doesnt know who we are".

Now I find this particular form of words very interesting, because while it is not a clear admission, it is only a half-hearted attempt at denial of my guess that "they" = "MI5". Had my guess been wrong, the fat youth

would surely have said so more clearly. What he was trying to do was to half-deny something he knew to be true, and he was limited to making statements which he knew to be not false; so he made a lukewarm denial which on the face of it means nothing, but in fact acts as a confirmation of my guess of who "they" are.

On one of the other occasions when I saw the persecutors in person, on the BA flight to Toronto in June 1993, one of the group of four men said, "if he tries to run away well find him". But the other three stayed totally quiet and avoided eye contact. They did so to avoid being apprehended and identified - since if they were identified, their employers would have been revealed, and it would become known that it was the secret services who were behind the persecution.

Why are MI5 So Afraid to admit their involvement?

If you think about it, what has been going on in Britain for the last nine years is simply beyond belief. The British declare themselves to be "decent" by definition, so when they engage in indecent activities such as the persecution of a mentally ill person, their decency "because were British" is still in the forefront of their minds, and a process of mental doublethink kicks in, where their antisocial and indecent activities are blamed on the victim "because its his fault were persecuting him", and their self-regard and self-image of decency remains untarnished. As remarked in another article some time ago, this process is basically the same as a large number of Germans employed fifty years ago against Slavic "untermenschen" and the Jewish "threat" - the Germans declared, "Germans are known to be decent and the minorities are at fault for what we do to them" - so they were able to retain the view of themselves as being "decent".

Now suppose this entire episode had happened in some other country. The British have a poor view of the French, so lets say it had all happened in France. Suppose there was a Frenchman, of non-French extraction, who was targeted by the French internal security apparatus, for the dubious amusement of French television newscasters, and tortured for 9 years with various sexual and other verbal abuse and taunts of "suicide". Suppose this all came out into the open. Naturally, the French authorities would try hard to place the blame on their victim - and in their own country, through the same state-controlled media which the authorities employ as instruments of torture, their view might prevail - but what on earth would people overseas make of their actions? Where would their "decency" be then?

This is why MI5 are so afraid to admit theyre behind the persecution. Because if they did admit responsibility, then they would be admitting that there was an action against me - and if the truth came out, then the walls would come tumbling down. And if the persecutors were to admit they were from MI5, then you can be sure I would report the fact; and the persecutors support would fall away, among the mass media as well as among the general public. When I started identifying MI5 as the persecutors in 1995 and 1996 there was a sharp reduction in media harassment, since people read my internet newsgroup posts and knew I was

telling the truth. The persecutors cannot deny my claim that theyre MI5, because then I would report their denial and they would be seen as liars - but they cannot admit it either, as that would puncture their campaign against me. So they are forced to maintain a ridiculous silence on the issue of their identity, in the face of vociferous accusations on internet newsgroups and faxed articles.

Have MI5 lied to the Home Secretary?

In order for the Security Services to bug my home, they would either have needed a warrant from the Home Secretary, or they might have instituted the bugging without a warrant. Personally I think it is more likely that they didnt apply for a warrant - I cannot see any Home Secretary giving MI5 authority to bug a residence to allow television newscasters to satisfy their rather voyeuristic needs vis-a-vis one of their audience. But it is possible that the Security Service presented a warrant in some form before a home secretary at some point in the last nine years, for telephone tapping or surveillance of my residence, or interception of postal service.

So the possibility presents itself that a Home Secretary might have signed a warrant presented to him based on MI5 lies. Just as MI5 lie to the Security Service Tribunal, so they might have lied to a Home Secretray himself. MI5 and MI6 are naturally secretive services former home secretary Roy Jenkins said, they have a "secretive atmosphere ... secretive vis-a-vis the government as well as [enemies]". Jenkins also said he "did not form a very high regard for how they discharged their duties".

It was only a few years ago that MI5 was brought into any sot the extraordinary thing is that British media organisations like the state- and taxpayer-funded BBC take such an active part in the MI5-inspired campaign of harassment. We have after all heard of MI5 trying to bribe broadcast journalists; but surely there must be a substantial number who are not bought or blackmailed by the Security Services, and who take part in the "abuse by newscasters" of their own volition? The BBC is supposed to be independent of the government of the day as well as the Establishment in general. While perhaps it is childish to think that the BBC is anything other than effectively state-controlled, the degree of collusion between the BBC and the British Secret Police MI5 is something you would not find in many countries. Individual tele-journalists in other countries would have enough self-esteem not to allow themselves to be controlled by their secret police - seemingly, BBC broadcasters like Martyn Lewis and Nicholas Witchell have such a low opinion of their employing organisation that they see no wrong in dragging the BBCs no-longer-good name through yet more mud, at the mere request (whether supported by financial or other inducements) of the British secret Police, MI5.

And when challenged, these broadcasters LIE about their involvement, with just as little shame as MI5 themselves. The BBCs Information dept have said that;

"I can assure you that the BBC would never engage in any form of
surveillance activity such as you describe"

which is an out-and-out lie. Buerk and Lewis have themselves lied to their
colleagues in the BBCs Information department over the "newscaster
watching", but unsurprisingly they refuse to put these denials in
writing. Doubtless if the "newscaster watching" ever comes to light, Buerk
and Lewis will then continue to lie by lying about these denials. So much
for the "impartial" BBC, a nest of liars bought and paid for by the
Security Services!

It is obvious that the persecution is at the instigation of MI5 themselves
- they have read my post, and only they have the surveillance technology
and media/political access. Yet they have lied outright to the Security
Service Tribunal. Similarly, BBC newscasters Michael Buerk and Martyn
Lewis have lied to members of their own organisation. The continuing
harassment indicates they are all petrified of this business coming out
into the open. I will continue to do everything possible to ensure that
their wrongdoing is exposed.

MI5 Persecution Update: Friday 11 June, 1999

Harassment in a pub in Clapham, Tuesday lunchtime

Once a month, or once every other month, I meet a Polish friends of mine who lives in Clapham North, and sometimes we go to a particular pub near where he lives. The last time was some two months ago; I did not have my minidisc-walkman with me, and consequently was seriously harassed by people MI5 had instructed to harass me, in the pub.

This Tuesday, 8 June 1999, we again went to the same pub for a pre-meal drink. This time I did have my minidisc-walkman with me. As you can guess, we were followed into the pub by a couple of young people (Im getting older and older - isnt it funny how the MI5 agents all look young these days?). They started talking about my situation, in particular some travel I had booked the previous day. Unfortunately, they were talking fairly quietly, and my minidisc didnt pick up their speech.

MI5s schizophrenic reasoning is that simultaneously I am very important and worthy of their acts of persecution, and I am also totally unimportant and their abuse of me "doesnt matter". Perhaps they should test their agents and managers for obsessive personalities or psychotic features in the same way as employees are drug-tested. MI5 might lose their "worst cases" employees if some psychological testing were applied to their recruitment procedure.

Toothless Watchdogs. What a Surprise.

Recently I have been engaging in communications with two watchdogs, the Security Service Tribunal which deals with complaints against the security service (and always clears MI5 of any wrongdoing), and the Data Protection Registrar, which is mandated to investigate misuse of personal data held on computer.

In a letter to Nick Brooks, Security Service Tribunal secretary, dated 20 April, I asked him if the Tribunal, as an allegedly independent body, had the means to investigate complaints against MI5 other than asking MI5 to themselves investigate complaints. To my disappointment, his reply two weeks later answered the question only indirectly, in the negative. Whatever the reader might think of the merits of the case I have been putting before you in faxed articles this last year and half, you will surely recognise that it is a significant anomaly for the Tribunal to have no independent means of investigating complaints, particularly given the view expressed even by previous home secretaries that the security services are untrustworthy.

MI5 Persecution: No Justice for the Victims of MI5

In a previous article I detailed the similarities between the current MI5 Persecution in England, and other historical instances of similar persecution, notably that by the Nazi Germans in the thirties and forties. The Germans persecuted first the mentally ill, the epileptics and those suffering from schizophrenia, then moved on to racial groups; in todays Britain the persecution is again directed at those with mental illness, which the British in their cowardice find easier than taking on racial groups as the Germans did. But just as in Thirties Germany there was no recourse against a malign and omnipotent state, so the MI5 Secret Police in the modern British Fascist State allow no justice for their victims.

No Recourse Against the Security Services Illegal Harassment

It has become apparent to me over the last nine years just how loaded the dice are in todays Britain, a fundamentally fascist country which masquerades as a democracy. Britain is a democracy in name only; the Establishment, the defence and MI5 secret police are always there, regardless of which party has been voted into power most recently - and from "New Labours" conduct in office one finds it difficult to tell them apart from Old Tories, in their crackdowns on the sick and vulnerable in society.

In thirties Germany the victims of the Nazi regime had no legal recourse against their State oppressors; and in todays Fascist British state, the victims of the Establishment and its MI5 Secret Police similarly have no recourse against the illegal state-funded and organised oppression. There is supposed to be a mechanism for dealing with MI5 crimes, in the shape of the Security Service Tribunal and Commissioner; yet these have never found favour of a plaintiff. One might as well ask the Nazi SS to investigate crimes against epileptics or Jews as ask the Security Service Tribunal to investigate MI5 crimes against British citizens; it is quite obvious what the answer is going to be, regardless of what you say to them, and what evidence you provide. The Tribunal and Commissioner are a mere formality, a whitewashing body to give the Secret Services a veneer beneath which they hide their shabby criminality.

"Institutional Racism" and Bigotry in the Metropolitan Police

The recent inquiry into the racist murder of Stephen Lawrence found clear evidence of systematic and deliberate racism in the Metropolitan Police, which cannot have surprised anyone. Commissioner Sir Paul Condon accepted a somewhat lukewarm definition of institutional racism as being "unconscious". In truth, and this truth must surely be obvious to anyone who has any familiarity or encountered the great British police, the Met has not just "unconscious" racism, but very clearly "conscious" and deliberate racism, of the kind that would have done Thirties Germans proud. And it is a bastion of such open racism - when many other parts of society are learning to live in a multicultural environment, the Met is

still living in the past in its attitude to the minorities.

But in addition to the systematic racism confirmed by the Lawrence inquiry, there is also something much more relevant to this case, which is systematic police bigotry against the physically and mentally disabled, which I personally have experienced in my dealings with the police over the years. You cannot expect equal treatment if you are mentally disabled. I tried to make a complaint to the police in 1995 about the harassment I had been subjected to for several years. As soon as they found out I had mental illness, they refused to even talk to me. I tried again in March 1999; the police made various threats to me, while ranting about "your paranoid rubbish" in reference to the complaints expressed to them.

The police refusal to do the job they are employed and paid to do is extremely serious, particularly as this case is highly important, indeed key to the whole issue of British self-perception at the end of the 20th century and the beginning of the 21st century. Britain has lost much in the last fifty years - it has lost an empire, it has lost its self-respect and its identity as a people. If the MI5 persecution finally makes it into the light and the Security Services are seen for the rather cheap bullies their behaviour indicates, it will have a massive and harmful effect on British self-perception in the new century.

Security Service Tribunal - Blatant Whitewashing

A few weeks ago I spoke on the phone to Nick Brooks, the Secretary of the Security Service Tribunal, which is supposed to deal with cases of MI5 transgression. I asked him if the Tribunal had ever found in favour of a plaintiff and against the Security Service. He answered that as far as he knew, it had not.

I also asked Mr Brooks if the Tribunal had any means of investigating allegations of criminal activity by MI5, other than asking MI5 themselves if they had engaged in such activity. His rather circuitous written reply states that the 1989 Security Service Act provides that "it shall be the duty of every member of the Service to disclose or give to the Tribunal such documents or information as they may require for the purpose of enabling them to carry out their functions under this Act". Which is a very round-about way of saying - "No" - the Tribunal has no way of investigating MI5 crimes - None At All.

Setting up the S.S. Tribunal, and creating a Security Service Commissioner, was really an act of falsehood by the government. It is generally recognised that MI5 are out of reach of the normal criminal justice system - the police, as we have seen, have no intesot answer to the government; in a previous article I quoted Roy Jenkins speaking of "a secretive atmosphere.... secretive vis-a-vis the government as well as [enemies]", and a "lack of frankness" from MI5.

If the government wanted to, it could reform the secret services and ensure they acted in conformance with the laws which have been enacted for them in the last ten years. But apparently the present government does not

see any need to ensure security service compliance with the law. As noted above, the regulatory machinery for MI5 is deliberately weak; the Tribunal has no independent means of investigation, and it is simply a waste of time complaining to the Tribunal or Commissioner.

Every so often, fresh revelations come to light of secret service transgressions. We have heard from Shayler that MI5 bugged Jack Straw and Peter Mandelson; we have heard from Peter Wright that MI5 plotted to see Wilson ejected from office; yet so closed is the system of government that the law is never enforced against MI5 when they "bug and burgle" everyone from politicians to ordinary citizens.

No Justice from the Legal System, either

Britain has a civil and criminal justice system which effectively limits many complaints from being heard. For a civil complaint to be brought before a court, you need a solicitor willing to act on your behalf. Supposedly it is possible to represent yourself as a Litigant-in-Pthe basis of being "frivolous and vexatious" or "disclosing no cause for action in law". This is exactly what happened to me in 1997 when I twice tried to take the BBC to court for spying on me in my living room at home; my case was twice struck out, and on the second occasion an order was made against me that I could not bring further civil litigation against the BBC without leave of the court.

As the reader can guess it is quite impossible for a person with schizophrenia, who complains about the secret services and media interfering in his life, to find a solicitor willing to represent him in legal action against the persecutors. I have quite a lot of evidence of the continuing persecution which I have posted on the website, even if the evidence is quite tentative and perhaps open to varying interpretations. But I have tried several firms of solicitors; some of them have acted unprofessionally and abused me; all of them have refused to represent me. My psychiatrist gave me the name of the firm of Bindman and Partners in central London, and I have approached them twice. On each occasion they refused to accept my instructions. Plainly the problem with Bindmans, which they have admitted, is their bigotry against mentally disabled people; yet this is not just something that is wrong with Bindmans, it is something that is wrong with the legal system as a whole, since the legal system necessitates finding a solicitor willing to represent you in order to bring a case to court, but it does not have a mechanism for providing a lawyer in the case where no solicitor is willing to take on your case. So the British legal system is such as to prevent cases such as mine from ever receiving an airing in a court.

So much for the civil courts. But the criminal justice system is no better. Two years ago the Protection from Harassment Act came into force. But again, while the Act is all very well on paper, in practice it is unenforceable in my case, since it would require Police action to see the law implemented, and if the police cannot even be trusted to conduct a murder investigation competently (in the Lawrence case), then what chance is there of their investigating complaints against the Security Service? Of course, it would be possible for me to personally issue

proceedings through a private prosecution either against MI5 themselves, or against one or more of their media tools; but here we see the same problems as with the civil courts, because first of all I would have to find a lawyer willing to act on my behalf. Litigants-in-person do exist in the criminal courts, but the Attorney General can bring such a prosecution to an end by taking it over and entering a plea of "nolle prossequi"; and I suspect that if I were to bring a private prosecution against either MI5 or one of their media tools, then this is exactly what would happen.

So much for British justice. But if anything the wrongs that have been perpetrated on me by the British justice system are quite mild to what others have suffered. Others have been wrongly convicted based on police evasions and lies, and spent many years in jail based on false charges. I should count myself lucky that despite the best efforts of the MI5 secret police, I have not acquired any criminal charges or convictions; which shows that for all their resources and influence, and the clear imperfections in the British legal system, there are still limits on how much subversion MI5 can achieve.

The latest in a long line of injustices

A comment I heard during the recent scandal of the police mishandling of the Lawrence murder investigation is that "its not as if the police themselves murdered him". This is not a particularly wise statement to make about the case, since it could be argued that the four alleged murderers were aided in their crime by the expectation that the police would deliberately botch the investigation - which of course is exactly what the police did.

But in my case, this would be a completely inaccurate thing to say - since the MI5 secret-police have expressly been trying to nine years now to see an end put to my life, either by having me incarcerated and my liberty ended, or by forcing self-termination on me. It is exactly as if the secret police "themselves murdered [me]", since that is what their aim is in their campaign against me.

The public has heard of instances of police mishandling of cases, of police manufacturing evidence, lying in court, extracting false confessions to clear up crimes, et cetera. Various instances of extra-legal activity by the secret services have also come to light in the last few years. The unhappy truth is that what MI5 have been doing to me for the last nine years is really nothing out of the ordinary for them. To me it seems unbelievable that this sort of systematic campaign of harassment, which thousands and thousands of people in this country and abroad are well aware of, could exist for such a long period of time with the media maintaining "omerta". But my case is not the first such instance of persecution by the "British secret police", and judging by the lack of any real controls on MI5, I very much doubt it will be the last.

MI5 Have Systematically Destroyed My Life

This is getting depressing. From the feedback Ive received, the recipients
of these faxes are tired of hearing my complaints, and in truth I am tired
of sending them. The reason I havent yet ceased sending faxes is because I
cannot think of any other effective means of replying to MI5s actions
against me, and I feel I have to do something to try to defend
myself. Three/four years ago I got the MI5 harassment out of my system by
posting about it on Internet newsgroups, and for a few months this tactic
was quite effective - I received (and indeed still do today) support from
newsgroup regulars, and felt I could make my voice heard and break the MI5
monopoly on access to the British media. But that was years ago, and today
nobody gives a tinkers cuss about my internet posts - so I have sought to
escalate matters by communicating directly with the politicians who
allegedly say how this country is supposed to be run.

Of course, its quite expensive to keep up a campaign of fax messages for

many weeks. Each set of faxes takes approx 50 hours to send over the weekend, and costs perhaps 35. My phone bill for the last quarter was 350. These figures are naturally insignificant compared to what MI5 have been spending against me over a similar period. It also takes a lot of time and energy to create a new article every week, and try and find new and fresh aspects and viewpoints on MI5s persecution of me. I am beginning to run out of both new topics and energy to write these articles.

So I have a suggestion to put before the MI5 persecutors who have been wrecking my life since 1990. In a few days time I will be going on holiday to Poland and Germany, for a couple of weeks. Previously, almost every time I have travelled by plane, or gone anywhere on holiday, the MI5 "wreckers" have been most assiduous in destroying these trips. My suggestion is; if MI5 leave me alone on this next trip, I will cease transmitting these articles. If, however, there are any clear instances of harassment (and I am very capable of recognising MI5 harassment when I see it), then I will make public these instances and publish any recordings I may make of them, and, unwillingly and unhappily, continue the articles.

Read about the MI5 Persecution on the Web

Keith Hill MP (Labour - Streatham), my elected representative, as ever refuses to help.

MI5 Refuse to Allow me to have a Normal Life

Its kind of difficult to contemplate having a normal existence when you know your entire house is bugged from top to bottom, for audio and, very unpleasantly, video; when your employment is systematically destroyed, over and over again; when every time you leave the country your travel is disrupted by MI5 plants on the plane yelling abuse at you..... you get the idea. I would like to have some semblance of a normal life, like my Polish and English friends do. But MI5 have made this impossible, and they have leached massive resources from the taxpayer to institute a life not worthy of the name on me.

A few years ago MI5 were very open about their aims in persecuting me. They were shouting "suicide" at me, both in Canada where I lived at the time, and during my occasional visits to London. You cant get much clearer than that. There have been instances as recently as a few weeks ago of this intention being voiced by their side; on 15 April 1999, a woman at the next ticket counter at the Royal Festival Hall said;

"it would kill it, you know, it would just be overkill... they can't stop can they"

meaning that "they" were trying to "kill it" i.e. me and they "cant stop". The audio file is at;

I wonder why they "cant stop". Nobody (who doesnt know already) believes my claims - so what difference would it make, if they were to

"stop" persecuting me? Perhaps what this persons remarks indicates, is the depth of the obsession MI5 have with this case. They have chosen at random a person from the general population, and done their worst to ruin my life. What is wrong with these people, that they persecute a national of the country whose citizens they are supposed to protect?

No Chance of a Harassment-Free Job

Since the harassment started in 1990 I have had three jobs, the first near Guildford, the second in Oxford, and the third overseas in Canada. All three jobs have been systematically destroyed by MI5. It is so ironic that MI5 employs a team of agents, each well compensated for their efforts, to persecute just one person paid a mere fraction of what they get for their "work". In fact, it is a joke that MI5 is allocated resources for this sort of effort. If this area of government were run along commercial lines then MI5 would be very rapidly closed down, they produce nothing of any value, instead spending their time obsessed with the bugging and surveillance of their former employees like Shayler, dangerous subversives like Straw and Mandelson, and "threats to national security" like yours truly.

Applying for my first post university job

When I was applying for my first post-university job in the closing months of 1990, I found at two or three job interviews that MI5 had got there ahead of me. Interviewers knew what words to repeat from what had been said at my home recently; MI5 had supplied them with words to hurt me, and the "British secret police" were trying to wreck my job search and discourage me from joining the world of work. This and the continuing harassment in the media and by the public meant that the search for a job took very much longer than it would ordinarily be expected to take for a person with my qualifications.

With my first job near Guildford came the knowledge that MI5 were doing everything possible to make me lose the job. Despite their efforts I managed to stay in work for ten unhappy months, during which they made very clear to me that they were bugging my workplace, my accomodation in Woking, my car, my home..... and they also made clear that they had "got to" my employer in Guildford.

Employment with Oxford

I was able to find a new job, with Oxford Computer Training Services (now ARIS/Oxford), quite quickly. But it became very clear, very quickly, that MI5 were treating this job the same as the first; they tried to get the other employees and in particular the managers to attack me. It was plainly MI5s intention that I be sacked fro this job. But I was not sacked; instead, after almost a year of abuse from OCTS managers, I was forced to seek medical help, and had to take two months off for medical leave. OCTS MD Hugh Simpson-Wells was motivated in keeping me on by the fear that if he sacked me, then I would take him to court for the treatment OCTS managers had meted out to me during 1992.

Emigration to Canada

When I emigrated to Canada in 1994, I did think that perhaps MI5 would leave me alone, given that I had made the effort to leave the UK and try to find a new life overseas. I could not see any reason why they would continue to harass me over in Canada. But clearly the MI5 agents had their salaries to think about, since continue to harass me they most certainly did, at my home in Ottawa, and by getting fellow employees to speak against me, as had happened with previous jobs in the UK.

MI5 are denying me a future in work

Former Chief Constable of Devon and Cornwall John Alderson had this to say regarding MI5's activities;

"MI5 is not under the same restraints as the police. They infiltrate organisations, people's jobs and lives. They operate almost like a cancer."

Currently I am on disability, and I can see that MI5 are denying me a future in work. It would be an insult to logic for me to return to work and find a job, in the knowledge that an entire team of MI5 agents, paid in total many times what I would be earning, would have the objective of seeing me "done down" in the employment, and ejected from the place of work. This situation is completely wrong and nonsensical - I would very much like to have a job, but MI5 are preventing me from even thinking about returning to work. The culture of secrecy in MI5/MI6 means there is no objective oversight of their expenditure, when external oversight and greater transparency might lead to wasteful and illogical operations such as that against me being shelved.

Watched and Harassed at my Home and Accommodation

As you will know if you have been reading these articles, MI5 have watched and harassed me at my home, and at every accommodation Ive had since 1990. Theyve also watched me at neighbours houses in London, and at short-term accommodation such as hotels and bed-and-breakfasts. They have used the "words" gained from these watching activities against me, by passing these words on to other people such as OCTS managers for them to make clear that I am being watched where I live.

Harassed at rented rooms in Oxford in 1992

This was at its worst in 1992 in Oxford, where during the week I lived at rented accommodation in Oxford, and at weekends returned to my parents home in London. I was being severely harassed by managers at my place of work, OCTS; and it was clear from the things they said that they were being supplied by MI5 with details of my home life, that they were being supplied with words to repeat at me.

In 1992 I moved house in Oxford many times, living at a total of five rented accommodations in ten months. In January I started off living in a rented room at Headington near the ring road / A40 intersection; then when

it became clear that house was being bugged, moved to a rented room in Botley, some miles away. It was at the house in Botley that I had an "interactive watching" experience with Martyn Lewis while he was reading the news; I threw a term of abuse at him; he first flinched, then gave a gsult of what I had just said, he was no longer "on my side".

So I moved house again. This time to a place in Cowley, near the Rover car works, where I stayed for a few weeks. Because of continuing harassment at work, I soon moved from this accommodation, to yet another rented room on Iffley Road. By this time I was very ill and being abused continuously at work. Again, MI5 followed me to the rented room on Iffley Road, and created new instances of "newscaster watching". There was a television in the room which I watched, and as you can guess the newscasters got at me when I was watching the television. Also once I was assaulted, if thats the word for what happened, on leaving the house; a youth grabbed me by the coat lapels, roughed me up a bit with various terms of abuse. I did not report this assault to the police, because what was happening to me at work was very much worse, and nobody seemed to think that that was worthy of being reported to the police. Later that day at work, Alex G, a fellow employee, said "I heard he was assaulted".... I had not told anyone at work about the incident that morning..... so once again it was made very clear that MI5 were watching my rented accommodation and giving information about what was going on there to managers at work.

So I moved house yet again in late autumn 1992, this time to a rented room in a large house on Woodstock Road. I stayed there for several weeks as the situation at work deteriorated due to OCTS managers abuse, until I was forced to take sick leave from work for two months and attend hospital as an outpatient; at which point I gave notice on the room, and returned to London.

MI5 continued to harass me after the diagnosis of serious illness was made. As reported previously, they harassed me on a flight to Spain in December 1992; and in 1993, when I returned to live and work in Oxford, they again bugged my rooms, as well as my workplace, although the intensity of the harassment was very much less than in 1992.

Watched, followed and harassed in Canada

It dismayed me to find that MI5 would not leave me alone after I had settled in Canada. In January 1995 I rented an apartment at the Bayshore complex in Ottawas west end. For some weeks there was no sign of the "buggers". But then it started all over again. They first bugged my car, which had a car alarm installed - the alarm went off two or three times in a single evening, and the following day gave a signal that the car had been broken into. Then they bugged my apartment, and in particular they installed bugs on the phone line in my apartment.

In September 1995 I moved to a new apartment in Ottawas Bytown Market area, the restaurant and entertainment heart of Canadas capital. This proved a serious mistake. In the west end I had been fairly distant from the centre of town where MI5 concentrated their efforts at turning people against me. In the Market area it was much easier for the persecutors to

motivate people to harass me, and over the next couple of years there were frequent instances of harassment by the general public.

From 1995 I had some Polish friends in Ottawa, and as the reader can guess, MI5 have spent much effort trying to break up this friendship. They supplied various things about my home life to these friends, for example where I was living in the Market, directly over the road were the studios of a music radio station, which you had to "look up" to see; and MI5 told these friends that I was "looking up" to see the radio station; so the friends then replayed these words back to me, that I was "looking up". MI5 have also made various sexual slanders against me, and these friends also unwittingly replayed some of the words they had been imprinted with by the MI5 persecutors.

MI5 Will Never Allow Me to have a Normal Life

I have heard many excuses as to why MI5 continuously prevent me from having a normal life. We are told that MI5 are defending the country against a tere to zero.

When I have travelled abroad, they always put their people on the flights, on the journeys I undertake, to continue the harassment, so that I am put off further overseas travel, and chained to my home in London. Yet even this is illogical, because when I lived in Canada, they would still put people on flights back to the UK.... and what possible reason would they have for doing that? Perhaps the truest words to describe the MI5 persecution is that reason has nothing to do with their activities - sane people do not behave in the way the MI5 British Secret Police have been doing.

Summer 1999 - more MI5 harassment?

In only a few days time I will be going to Europe again. This time I have deliberately chosen to travel by a non-UK airline; so we will see if they put their paid agents on this foreign carrier, we will see if they try to harass me on this non-British flight.

If they do harass me on this trip to Europe, or if they resume the harassment in London after I return home, then I will continue to report their activities in these faxes. As I said at the beginning of this article, I would very much like to not have to send these articles any more, but that is not my decision to make - it is entirely up to MI5 to cease their pointless persecution of me, once and for all.

While I can't help, I have a similar problem with the Bit 3. I have a 256K ram card I can't use at the same time due to address overlapping. And I also have no ram past 32K.

Its that time again. I am wanting to know about any known active Atari
Users groups in the world.

Thanks,

Folks, we're down right now. Apparently, my UDS10 has died.

I'm saving up to get a new one - as soon as we're up and running
again I'll post messages all over.

Apologies for the down time, and thanks to everyone for being
patient.

Here's what I have for 8-bit Atari groups:

   ABACUS - Atari Bay Area Computer User Society
   http://www.abacusonline.org/

   ABBUC - Atari Bit Byter User Club
   http://www.abbuc.de/

   ABBUC HAR - Hanover ABBUC Regional Group
   http://www.bertelmann.org/har/

   ABBUC RAF - Frankfurt ABBUC Regional Group
   http://www.abbuc-raf.de/

   ACEC - Atari Computer Enthusiasts of Columbus
   http://acec.atari.org/

   IMAGE - Indiana-Michigan Atari Group Exchange
   20087 Roosevelt Rd, South Bend IN 46614-5026, USA

   SCAT - Suburban Chicago ATarians
   http://www.scatarians.org/
   web site temporarily down, but club is active

   SLCC - San Leandro Computer Club
   http://william_george.tripod.com/slcc/

   SPACE - Saint Paul Atari Computer Enthusiasts
   http://space.atari.org/

I can speak for 2600 Connection -- it's not available online, outside
of some sample articles, but it's still available in paper form; new
issues even.

FamilyNet International Newsgate

Some interesting BBS news... this is just to catch you up so that you can go into the BBS's without having to dig for this and can therefore just jump in....

1) Boot Factory - sysop Abdul
(Atari 8-bit BBS, emulation, ATASCII option)
Running well. Marius (of the fifth BBS to be mentioned here) mentioned thinking about selling his Atari equipment on the message base here. I really hope he didn't.

GAMES ON THE BOOT FACTORY
1. Blackjack
2. Rule Prometheus! (Kingdom)
3. Pro-Zee
4. Keno!
5. Life Expectancy
-. Coal Mines of Midlothian (Selectable from main menu ATASCII needed)

2) Inside The Atari 8 Bit - sysop Steve (Atari 8-bit BBS, Real equipment, ATASCII option) Up and going. Been a little activity on the first message

base. The game menu does not seem to be active at this time. However this BBS is known for being possibly multi-channel, so you can have more than one user on at a time, and this is run on the real equipment. Good ANSI screens and menus too for the
non-Atari user getting on this one.

3) Mousenet BBS
(Atari 8-bit BBS, Real Equipment?, ATASCII option)
      "11-04-07 BBS Crash"
"sh*t happens, the BBS was crashed the last days and killed all the Boardfiles and my Boot partition. The userist was not deleted. not I have installed an older Backup from 10-03-07 (only the Boardfiles on Partition 5)"
      When I checked the message base was not letting me post. So if someone could please let the sysop know if you know him.

      MOUSENET has ATASCII cartoons and ASCII picture galleries.

4) Darkforces BBS
(Atari ST BBS run on a Mega ST 2)
      UDS-10 (Serial to Ethernel adaptor) is down. Will be back up when a replacement comes.

      DARKFORCES, when it comes back up, is a great ST BBS that has a variety of message areas, and many online games. More on this soon.

5) Atari 8-bit Inside - Sysop Marius (Atari 8-bit BBS run on the real hardware)
See the first entry for the Boot Factory. Possibly down for good. :(

6) ST Guild BBS - Sysop Chuck B
(ST BBS run on... ???)
telnet://stguild-bbs.dydns.org/
On Thu, 25 Oct 2007 22:16:19 -0400, Chuck B wrote:
> I have had some problems with over the last few months. I and had to shut it
> down. But if you want I will put it back up right now!! I am going to see
> how things go for a month so give it a try.

     Will have to see if he is willing to give this another go. Posted a message on the Atari ST newsgroups to see what the plans are. Hopefully Chuck will reply.

7) Closer To Home - Sysop Tom Hunt (Atari 8 bit BBS run under emulation, ATASCII option)

     This long time BBS has been basically up for forever. It has spells where it is down while family uses the computer, so who knows on this one. There is a discussion about Tom Hunt's work at http://www.atariage.com/forums/index.php?showtopic=101584&pid=1310240&st=0&#entry1310240

8) The Grove BBS
(Atari ST BBS run under emulation.) Telnet://shadow.skeleton.org
(Type BBS and then nothing for the password)

Just got on this BBS the other day, looks really promising.

Here are the games...
1. Assassin
2. Galactic Empire 2.41
3. Final Frontier 1.53
4. Space Trader Elite
5. Mount NevereST Trivia
6. Cows 9.0
7. Super Star Trek
8. Death
9. Air Defence 3.8
10. Moria/ST
11. DDST (AD&D ST)
12. Pirate Adventure
13. Ghost Town Adventure
14. Blackjack
15. James Bond: World Domination
16. Trivial Pursuit

PLEASE if you know of any BBS's that are up that are not listed, please let me know ASAP as we are adjusting the BBS list at telnet://rdfig.net (again "X" at the main menu for internet options, then "A" for Atari, then select the Atari BBS on the list. There are broken links, this will be all updated completely soon).

Also don't forget the Atari IRC chat starting at 8 pm CST. (I'll be a late arrival, but plan to be there eventually.) (telnet://irc.atarichat.net port 800 will take you there, otherwise irc.newnet.net #atari)

Take care fellow Atari 8-bitters!

Doc Clu - beige 800 user!

Indus GT Synchromesh is enabled for DOS XL and SpartaDOS X but I need
Indus.sys for Atari DOS 2.x and any DOS to enable the Synchromesh mode.
Anyone uploads it to me?

Thanks!
Jack

    Sorry to hear that.

    But Atariage is a lot of fun, and most people I see I talk to on chats.

Sweet!!

I was thinking the same thing. So has anyone tried to hack this? I've been thinking this would be great on the Jaguar. Of course you would need a different interface, or at least an adaptor to adapt Jaguar to 2600 ports.

And what would you use for the music? I think it would be great on the Atari 8-bit if maybe you could hack an AMS player or something to play along.

Remember the one that showed the notes as you played? What if you had something like that, only have the notes fall into place and you play as they hit the keyboard.

Actually maybe really learn an instrument. :D

Anyway, love Guitar Hero.

I belong to two group. Once is in my area and that is IMAGE (Indiana-Michigan-
Atari-Group-Exchange). I conduct the meetings at my house and I write most of
the newsletter. There is about 7 people that come to the meetings and about 15-
20 more that receive our newsletter either my email or regular mail. The other
groups is SCAT which is in Chicago. Nice group of people that group.

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

The Atari computer intellectual property rights are currently owned by Atari Interactive, which is managed by today's Atari, Inc. Both of these are divisions of Infogrames Entertainment.

http://faqs.cs.uu.nl/na-dir/atari-8-bit/welcome.html

NEWSGROUP BACKGROUND

comp.sys.atari.8bit was created in November 1986 (as part of the Great Renaming) as a direct replacement for: net.micro.atari8

comp.sys.atari.8bit is unmoderated, and has no formal newsgroup charter.

The comp.* hierarchy of Usenet newsgroups is managed by the Big-8 Management Board: http://www.big-8.org/

RELATED USENET NEWSGROUPS

alt.binaries.comp.atari8bit
Programs for Atari's 6502-based orphans.

comp.sys.atari.advocacy
Attacking and defending Atari computers.

comp.sys.atari.announce
Atari related hard/software announcements. (Moderated)
Moderator: Kevin Savetz
comp.sys.atari.announce web page: http://www.atariarchives.org/csaa/

comp.sys.atari.programmer
Programming on the Atari computer.

FamilyNet International Newsgate

[We are looking for current BBS's of other retro platforms aside from Atari. Please write the E-mail address at the bottom of this message!]

[[This announcement will be the last posting regarding the Atari Telnet BBS Gateway till at least March 2008, so please save this message. The Prison Board BBS is not here to Spam newsgroups, but inform of a FREE SERVICE of the Prison Board BBS to make access to the Atari BBS's and chats much much easier.]]

FANS OF BBS's and Atari chat rooms...

The ATARI GATEWAY has all known Atari BBS's, and a some unknown. To find out which is which, come check it out. :)

There are also links to the Atari IRC chat (which meets at 8 pm CST Thursday, and off and on throughout the week at random times.)

And there is a link to the telnet chat (Which meets at 10 am CST Sunday and 7 pm CST Tuesday, and it good as a message area after that)

All this updated TODAY! icon_mrgreen.gif Merry Christmas to all BBS & chat fans, and please come see what is new at the Atari Gateway...

telnet://rdfig.net

X at the main menu (after you get past all the intro screens) for "Internet" A for the Atari menu

Then select 1 though 11.

Important details and FAQ Answers
- I don't think Inside the Atari 8-bit second line is active, but left there since it is off and on.
- Dark Forces is not currenlty up, but will be VERY soon.
- Some of these BBS's like Boot Factory will output character in a strange order when you type. This is a strange echo effect over telnet that needs to be ironed out eventually. However, you can read fine, and if you just type away, the output will look normal on the other side. it is only messed up on your side of the screen.
- The Prison Board BBS that runs the Atari Gateway can run as low as 300 baud, however, it will take about 45 minutes to get past the intro screens. We are currently working on this.
- The Prison Board BBS has a dialup line in addition to telnet access at 972 329 0781
- The Prison Board BBS is considering adding Atari Newsgroups as well as making areas for other computer enthusiasts such as Commodore and others.

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

The Atari computer intellectual property rights are currently owned by Atari Interactive, which is managed by today's Atari, Inc. Both of these are divisions of Infogrames Entertainment.

NEWSGROUP BACKGROUND
comp.sys.atari.8bit was created in November 1986 (as part of the Great Renaming) as a direct replacement for: net.micro.atari8

comp.sys.atari.8bit is unmoderated, and has no formal newsgroup charter.

The comp.* hierarchy of Usenet newsgroups is managed by the Big-8 Management Board: http://www.big-8.org/

RELATED USENET NEWSGROUPS
  alt.binaries.comp.atari8bit
    Programs for Atari's 6502-based orphans.

  comp.sys.atari.advocacy
    Attacking and defending Atari computers.

  comp.sys.atari.announce
    Atari related hard/software announcements. (Moderated)
    Moderator: Kevin Savetz
    comp.sys.atari.announce web page: http://www.atariarchives.org/csaa/

  comp.sys.atari.programmer
    Programming on the Atari computer.

I don't understand the point. Atari++ comes with its own Os, backwards
compatible, and sources available, of the Os, and the emulator. Of
course, programs jumping into fixed ROM addresses won't work.

So long,
     Thomas

MI5. Persecution: Molestation during Travel

MI5s persecution of me varies in. intensity. Since 1990 it has been steady for perhaps 80% of the time; there was a notable quiet period in. 1993, and another quiet period in Jan-Feb 1995,. as well as a hiatus in the first two months of 1999. It puzzles me that they cease. and restart, seemingly without any logic or reason. But. one aspect of MI5s activities against me which. is relatively predictable is this weeks articles topic, which is Molestation during Travel. Almost every time I cross. the Atlantic, go to the. Continent or even try to enjoy a holiday in this country, you can bet that MI5 will be there doing their utmost to. wreck it all.

This aspect of the harassment is particularly relevant as. I will be travelling. to Europe again in a months time, with naturally the Minidisc recorder in tow; so it will be. interesting to see if I can record the abuse which will almost certainly take place, either on the. Tube going to the airport,. at the airport, on the flight, in the terminal building - MI5

have previously. instituted instances of abuse at each of these locations, so well see how much taxpayers money they. waste this time, and whether it will prove possible to capture their. abuse on minidisc.

Read about the MI5 Persecution on the. Web

June 1992. in Polands mountain resort of Zakopane

The persecution started in June 1990, and for the. first two years I stayed in the UK apart from a couple of brief day trips to Calais.. By the summer of 1992 Id had enough of being cooped up in England with abusive. fellow employees egged on. by an abusive secret police service, and decided to spend 10 days in southern Poland, on. what was intended to be a holiday at the mountain resort town. of Zakopane.

Unfortunately. the psychopaths of the Security Service were not willing to allow me to enjoy a holiday in peace and. quiet. The journey to Zakopane was by coach. from the meeting point at Londons Victoria coach station (National Express) followed by ferry followed. by another coach across Europe. As we left Victoria a youth. and his girlfriend started a loud tirade of abuse directed at "this. bloke", where the "bloke" was never named, but. it was very clear that the "bloke" was myself. The youth said "they" had "found somebody from. his school, and he was always really stressed at school, a real. psycho". Again, the label "they" was not elaborated on, but it was clear that "they" = the persecutors. from MI5. The boy also said, "he was in a bed and breakfast for. only one night and they got him". By. a not unexpected coincidence I had been in a B&B in Oxford a week previously, which had been. booked from work; other things lead me to the conclusion that the company's. offices were bugged for most of the 2 1/2 years that I was there, so "they" would have. known a room in the B&B had been booked. After a few minutes of this I. went back to where they were sitting and asked where they were travelling. The boy. named a village in France, and the girl's giggling suddenly. ceased; presumably it permeated to her brain cell. what the purpose of the boy's abuse was.

It is now very clear to me that. MI5 were trying to have me incarcerated, assaulted or killed on this trip across. Europe. The degree of verbal violence inescapably leads to this conclusion.. When we arrived at our destination,. it became clear that many people, both in our tour group and its guide, and among the ordinary residents of the. town, knew there was a movement under way to "get" me. MI5 employed many people. and significant resources for an action which they knew would. only take a maximum of ten days. A commercial operation would never have felt able to. waste such resources on such an unproductive and temporary action; only. a state-sponsored, taxpayer-funded entity like the Security Service. would be able to be so. wasteful.

To give some examples of what happened in those ten days; I was. walking in some woods. outside the town, when a Polish woman, looking at me, said the English "shit" in a strongly Polish-accented voice. For the. first three years 1990-92 MI5 had been trying to force. this word on me. Another example; I was. walking near my "hotel" when a mother said laughing to her child, "a wiesz ze to prawdziwy wariat" which. means "you know hes a real

madman". And the "TV reacting" happened there. too; on Polish TV, a bemused looking journalist said to another, "to jest sprawa Anglikow", which. means "its. the concern of the English", in other words, none of our business, despite what the English are trying to force. down our throats.

Just. before we left for home, I went with some others from our group to a nearby bar. There a man shouted at me. the same sexual obscenity which MI5 have constantly thrown at me these last three years. I. think MI5 try to justify their various terms. of abuse by repeating them at me until I say them, either while conscious or while talking in my sleep; and. then they seize on my saying those words to "prove". that the obscenities are "my fault", et cetera. This rather stupid reasoning of. theirs can actually be seen as indicative of the psychopathic condition. attributed to them in a previous article; blaming the victim for the crime you inflict on. him is how psychopaths. think.

Nor did the persecutors let. up during the return trip. Returning on the ferry over the channel, a rather insalubrious-looking guy talked to. his mates about "and you know this bloke,. hes really mad you know, hes really mad". On the National Express return coach to. London, a group of five or six young people started shouting at me. I slumped in my. seat and tried to avoid presenting a target, so they. got ever more strident - "whats the matter with you, cant you hear us?" One of the other people who. had been on the trip to Poland asked them why they were shouting at. me, and they said, "hes been to Cambridge", to which the co-holidayer. asked them, "have you been to Cambridge?" presumably thinking. they were aggrieved fellow students, but they. answered "no". Even after I left the coach at Elephant and Castle abuse continued; in the tube station, two kids started. throwing abuse at me; one of them said. to the other, "and you know he works?" to which the. other answered "yes".

Immediate Aftermath of. November 1992

As you will know from previous articles, my. manager at OCG - ARIS/Oxford, Mr Mitchell, induced a. mental breakdown in me in the months leading up to Nov/92. The diagnosis was regarded by. the persecutors as a victory for them, because few if. any people give credence to allegations of harassment when they. are made by somebody suffering from schizophrenia. There is also a bias against the mentally. ill, an "institutionalised bigotry" in society comparable to the institutionalised racism against. blacks.

However, MI5. did not let up on persecuting me following Nov/92. In December 1992 I. flew by charter jet to Alicante in Spain for two weeks recuperation. MI5 planted one of their people on the. flight, a youth who tried to. start some noises that "hes a nutter". One of the other passengers replied, "oh hes a nutter is he? oh well!". and the youth shut up and. said nothing for the rest of the flight. I think it would be fair to say that the youth on the flight was embarrassed by what he. had been asked to do in making. the flight "uncomfortable" for me; he sounded defensive rather. than aggressive.

My. first trip to Canada in June 1993

Ive already covered this in a previous article so. Ill just give a brief summary here.. On 10 June 1993 I flew British Airways from Heathrow to Torontos Pearson Airport. On de-planing from the aircraft, one. of a group of four fellow passengers looked at me and. said, laughing, "if he tries to run away well find him".. It was quite obvious that these four men were the ones who had. been harassing me since 1990.

I did nothing to. apprehend them or bring this incident to the attention of the airport authorities, mostly because this was my. very first visit to Canada,. and the last thing I wanted was to get into a dispute before I had even finished disembarking. In retrospect, I can see this was a. terrible mistake; I should have made. every effort to detain and identify these people.

Subsequently I have made numerous attempts. to obtain the names of these people from British Airways passenger lists, by talking to BA, through. a lawyer in Ontario, through a. solicitor in England, through the UK police, and also through private detectives in the UK. But all my. efforts have come to nothing. BA have told me they keep passenger. lists for a period of seven years, so they will. still have the list for this 1993 flight. I did not see or hear anything during the rest of my visit to Ontario in. 1993 which would have lead me to. believe that I was being watched or followed.

Journey. across Canada in summer 1994

As I think Ive already said in. previous articles I emigrated to Canada in late May. 1994. For six weeks between late May 1994 and early July 1994 I travelled across Canada from coast. to coast, starting in Toronto, visiting various cities and ending up in British Columbia. I saw this both. as something of a. holiday, and the chance to get to know a little better my adopted. country.

As you can. guess, MI5 followed me everywhere I went during these six weeks. In Toronto, where I started this trip in. late May, I was spoken about by one youth to. another with the words "hes an idiot", to which the other replied, laughing sympathetically, "good luck to. him".

A couple of days later I went to Montreal. and stayed at the YMCA downtown. As you can guess (this is all. so predictable, isnt it?) MI5 followed me there and bugged my room at the YMCA. Not only that,. but they managed to set-up an instance of. "newscaster reaction" from a local television station; while I was. watching a Vermont TV news programme on the set in my room, the. woman reporter said, "well theyre just tired and they want to go home", which sounds like a. pretty unprofessional thing to say until you realise she was trying to say of me that I was. the one that was supposed to be tired, and they (ie MI5) wanted me to go. home to the UK.

On the bus journey across the North American. continent, it was quite clear that MI5 were following me every step on the. way. For the first part of the journey they actually put someone on the bus with me, a youth who. said at me "that guys paranoid" and tried to incite other passengers. to attack me. I. stopped for a couple of days in Winnipeg in central Canada, and on

leaving the town. heard on the radio a female presenter ranting about "insanity! insanity!". It is very tiring. travelling such a long distance by bus; I took the journey in two steps, each of. about 36 hours; and it is especially tiring when you know MI5 are watching you and harassing. you every. step of the way.

When I finally. got to Vancouver, MI5 instituted the usual harassment, in very short order.. I was surprised how quickly they were able to induce hatred towards me in elements of the general. populace; the Security Service must have employed a. number of agents and serious resources in a very short period of time; and for no. real gain, because I havent been back to BC for almost five years, so all. their "work" appears to be for nothing.. In downtown Vancouver a street person said in front of me, "theyre all talking about. him". For a few days I was staying at Pauls Guest House (345 W.14th Ave); on the day. I left, the owner Paul shouted at no-one in particular, "hes. going to Victoria" - which was quite accurate, I was. indeed going to the provincial capital Victoria on Vancouver Island. But I had not told anyone at the guest house where I. was going; I had only mentioned to my parents back in. England on the phone that I was going away from Vancouver. for a few days. Which leads me to suppose that MI5s bugging of the. phone in my parents house yielded the "intelligence". that I intended to visit Victoria, and they had passed the information on. to Paul.

When I got to Victoria it was. again obvious that the persecutors were "doing their stuff" there as. well. On the street I was identified as being English, although I had not said anything so my. accent hadnt given me away; and returning by ferry. to the mainland, I was abused by a Canadian woman who said,. "hes a nutter! you can run but you cant hide". During my years in Canada I. have never heard the word "nutter" on any other occasion;. I do not think it is part of Canadians vocabulary; so the Canadian woman. on the ferry, who was obviously talking about me, must have been supplied with this word by the English persecutors. And once. I got back to Vancouver, staying at the Austin Hotel on Granville St, I. listened to a conversation in. the apartment block directly opposite, and a man saying, "hes paranoid, so thats as bad as it can. be, so why are they doing this. to him?".

Holiday in the States,. August 1995

By 1995 I was living in Canada, and in August I. went down the eastern seaboard to Florida and as far as Key West by car. As. you can guess (this is all so boring and predictable,. isnt it?) MI5 followed me every step of the way.. I can see in retrospect that this must have been quite easy for them as they had my car bugged,. both on the inside to listen to anything that was said and what radio station I was listening to, as. well as what must have. been a tracker device installed to track it across long distances.

The first city I. visited was Philadelphia. In the old Congress Hall where the first US Congress assembled,. the woman guide started referring to my situation, saying that "all these people in Europe were watching it",. and they were "a little paranoid" at this 18th-century experiment. in

democracy. Also I had recently written a newsgroup. post where Id described a (female) poster. as "wet-nosed" (implying "canine"), and a young girl in Philadelphia remarked, "so. he thinks were dogs?" There were two or three more. incidents during this holiday in the eastern States, including a radio station down near Miami, showing "they" had tracked me all the. way there, and were bugging the inside of my car; but I didnt record. the details. and Ive forgotten some of it now. Also down in Miami Beach a French tourist in a lift expressed support. for me with the words, "cest incroyable" ie. its incredible, meaning that MI5s well-known. actions against. me were beyond belief.

To go back a. bit, in about May/June 1995 Id visited New York, again by car, and was insulted several times by people using the same. words that had been used against. me in England. In Central Park, and elderly Englishman. (not a real gentleman - but then the Engish view of themselves as "gentlemen" etc is quite laughable) looked at me and. said "idiot". And while I was. eating in a streetside restaurant a New York youth started laughing and said something. like, "I cant believe it, hes actually here" - I think that was because I. had had an expressed wish to visit New York for some years. before this, although after this visit I wont be going there again for a very. long time.

Visit to Poland December. 1995/January 1996

In. December 1995 I flew (BA again, unfortunately - every time Ive flown BA one. of these incidents has happened, presumably MI5 is happier setting up harassment on British-domiciled carrier) from Montreal to. Berlin and travelled on to Poland to visit. family. MI5 naturally harassed me in Poland during my brief stay. They followed me around. and got Polish people to take part in the harassment.. In one case two Polish youths talked in front of me saying in English. (with marked Polish accents), "fucked up men, fuck you". There. were also other incidents which I dont remember too clearly since it was some. time ago.

The return flight connected through Heathrow, and in. the transit lounge MI5 again set-up harassment against. me. In Poland they were talking their abuse in English, and. in London they set Polish people after me to speak in Polish; they heard me on. the phone to my father, and said "a wiesz ze to Polski wariat", in an almost. sympathetic, inclusive fashion (translation.. "you know hes a Polish nutter"). Once on the flight to Montreal I was again set upon by two English youths, one of whom spoke. and the other listened. The. aggressive "fat bastard" youth said, "if he wants to be a wanker" (its my fault theyre harassing me, you. see), self-justification that "hes. a nutter" (so we have to keep on abusing him, because hes ill), as well as. talking about the town in Poland where I had been staying. He also said, "he doesnt know. who we are", but as already remarked in a previous article, that was at best. a half-denial of my guess expressed in internet. newsgroups that the people after me were MI5 - if anything its a half-confirmation rather than. a half-denial.

These incidents are still going on. You can hear. digitised audio files of abuse on a BA flight to Berlin in. 1998 on the Web at address

On. this flight they were again attacking my mental health; "paranoid, hes paranoid". and "nutter" are discernable. The last "during travel" contact was at Ottawa Airport on. 21 July 1998, when "Alan Holdsworth" the psychopath MI5 agent, dressed. as a vagrant, was pacing aggressively in the departure area. In three weeks I will. again be travelling to Europe; we will see what. fresh acts of molestation MI5 perpetrate during this trip.

>

> No! he should put in his dues and suffer with the tapes like we did
> back in the day!

Absolutely!

I remember my first Atari's (yep I had more than one at the time). A 600xl,
800xl, and XEGS. 2 Tape drives to use with em. Loved it! Getting my first
1050 was ecstatic!

Learn from the beginning and enjoy yourself! The old atari days were great!
There's still lots of resources and reading material out there to help you.

Just remember to have fun and you'll really enjoy the 8bit :)

MI5 Persecution Update: Friday 25 March, 1999

If You Intend To Reply, Please Read This
Please.... keep your response to one page if you can!. Faxes over a page
or two will be deleted without being read.

The Usual Words

The persecutors-who-wont-admit-theyre-MI5 have been active again this week. On Saturday 20/3/99 I visited Ravenscourt Park in west London, and was verbally assaulted with the usual words, "something wrong with him". This audio file is on the web at URL;

This afternoon (Friday 26/March) I was again verbally assaulted while travelling by bus. The same sexual obscenity was thrown at me, and the incident was recorded on my minidisc-walkman. Because of the deeply offensive nature of the slander, I will not be posting this on the website.

Keith Hill MP (Labour - Streatham), my elected representative, as ever refuses to help.

MI5 Persecution : Browse Website

The March 1998 issue (number 42) of .net Magazine reviews the website describing it as an "excellent site". Since August 11, 1996 over 50,000 people have browsed this website.

You are encouraged to read the web pages which include

a FAQ (frequently asked questions) section outlining the nature of the persecutors, their methods of harassment through the media, people at work and among the general public

an evidence section, which carries audio and video clips of media and workplace harassment, rated according to how directly I think they refer to me

objective descriptions of the state security agencies involved

scanned texts of the complaints I have made to media and state security agencies involved

posts which have been made to netnews over the last four years on this topic

This article outlines what is to be found on the webpages, which you are encouraged to browse for the complete story.

Frequently Asked Questions

Your excursion through the website starts with the "FAQ - Frequently Asked Questions" portion. MI5s campaign of harassment against me has been going on for almost 9 years, and its longevity and breadth is reflected in the FAQ. Many thousands of people in Britain and abroad, including some recipients of this fax, have known for many years of MI5s activities against me. The FAQ describes the mass "Omerta suppressing its publication"; we pretend Britain is part of the "Free World", yet the British Secret Police, which is what MI5 are, carry on for many years a campaign which politicians and the media know about, and rely on the

silent complicity of so many thousands of people.

The FAQs introductory article names those who are "in the know"; media figures like Martyn Lewis, Michael Buerk, entertainment figures like Chris Tarrant, politicians and many in the general public, "all united in a conspiracy which breaks the laws which the UK does have regarding harassment, and all completely uncaring for any semblance of decency or elementary respect for individual rights.

Broadcast media play a key role in the harassment. The very first incident in June 1990 was when a television newsreader reacted to what she saw happen in my living room at home; such incidents of "interactive television" are still happening in 1999. The same goes for radio stations such as Capital FM. In spring 1994, Chris Tarrant on his Capital morning show made an aside to someone else in the studio, about a person he didn't identify. He said, "You know this bloke? He says we're trying to kill him. We should be done for attempted manslaughter". Tarrant and Capital have made strenuous efforts to avoid answering this charge.

Perhaps worst of all, MI5 have deliberately set-up many incidents in public places such as tube stations, shops, cinemas, where they have paid people to throw abuse at me. Since MI5 obtains funds to the tune of 160 million a year to fund its criminal activities, it has funds both to pay its operatives and to "buy" media figures and members of the public to take part in its campaign of persecution.

The Security Service are professional liars. They throw slanderous abuse, yet they refuse to admit out loud that they are doing so. When challenged about their activities through the Security Service Tribunal they lie and deny their activities. They induce other workers and managers at places of employment to take part in their campaign of abuse, presumably by buying them in the same way they buy media figures.

Complaints, and Press Coverage (BBC Lies, MI5 Lies)

As you might expect I have challenged both the Security Service, through the Security Service Tribunal, and offending broadcasters, to own up to what they have been doing. And as you might also expect, all of these people have lied through their teeth. Still worse, they have refused to commit unambiguous lies on paper; they have couched their lies in bureaucratic language, and allowed others to make false assurances and tell lies on their behalf. So when their lies are exposed, they will then tell further Clintonesque lies about how they werent really telling lies in the first place!

On 6/Feb/1997 the BBC told me they would "never engage in any form of surveillance activity such as you describe". The BBC told me Buerk and Lewis had refused to put their lies in writing, but had stated verbal falsehoods denying my accusations of "interactive watching" during news broadcasts. Clearly Buerk and Lewis fear being caught and exposed, so they hide behind their Viewer Correspondence department.

In March 1997 I issued a summons against the BBC to try to "smoke them

out". This summons was struck out as "disclosing no reasonable cause of action", because I had acted as a Litigant-in-Person and most LiP summons are treated thus. My case was arguable in law, so the striking out was unjust.

In June 1997 the Security Service Tribunal wrote to me regarding the complaint I had brought against MI5 in February. They say, "The Security Service Tribunal have now investigated your complaint and have asked me to inform you that no determination in your favour has been made on your complaint." I think you can guess the contempt which I feel for the Security Service Tribunal, who have never made a determination against MI5, and act as merely a whitewashing body for the Security Service. Unsurprisingly in May 1997 the Interception of Communications Tribunal gave the same result.

The last few items of "Press Coverage" give details of mentions of the MI5 Persecution in various magazines and newspapers such as BBCs Ariel, the Observer and .net magazine.

Evidence

Some audio and video clips of evidence have been recorded. My weakness in this area is because most of the really unambiguous evidence would have been obtainable in 1990-92, but I wasnt taping anything at the time, and its very difficult to now obtain recordings from that period.

The audio clip "Life is so Hard" relates to harassment at my workplace in Canada. In the latter half of 1996, I was sitting near to co-worker Mark Lee, who kept coming out with words and phrases which showed MI5 were supplying him with data from my home life. For example, I would say something on the telephone at home, and the following day he would repeat verbatim what I had said. When Mark Lee saw I was recording what he was saying, he started to make his remarks more ambiguous, or make the obvious ones out of earshot of the recorder.

However, during the evening of 12 November 1996, at home in my apartment (flat to you UK-ers), I said "life is so hard, and then you die". A nihilistic, negative thing to say, but quite distinctive. The following day, 13 November, Mark said loudly, "life is so hard eh, and then you die" followed by loud laughter. I captured this on my tape-walkman and the computer-audio file is posted on the website.

There are a number of other audio files in the websites "Evidence" area demonstrating the abuse to which MI5 subject me to through their paid agents.

Also in this section is a very interesting article by journalist Bernard Levin, which followed a meeting I had with a friend in 1991, and to my mind describes in some details Levins "artists impression" of the meeting. He talks about a "madman" who "bursts into tears, and swears it is all true. And it is."

Internet Newsgroup (Usenet) archive

From May 1995 until the present day, this matter has been discussed exhaustively on internet newsgroups. The most interesting articles from the first two years of posts are documented here. This area is worth reading since most of the questions which the reader would ask, have been asked at some time or another by someone on usenet. Perhaps the very first article posted sums it all up so succinctly;

Date: Thu May 4 18:27:24 1995
Newsgroups: alt.conspiracy
Subject: BBC's Hidden Shame

Remember the two-way televisions in George Orwell's 1984? The ones which watched you back? Which you could never get rid of, only the sound could be turned down?
Well the country which brought Orwell into the world has made his nightmare follow into the world after him. Since 1990 the British have been waging war against one of their own citizens using surveillance to invade privacy and a campaign of abuse in the transmitted media in their efforts to humiliate their victim.
And the most remarkable thing about it is that what they do is not even illegal - the UK has no laws to protect the privacy of its citizens, nor does it proscribe harassment or abuse except in the case of racial abuse.
A lot of people in England know this to be going on, yet so far they have maintained perfect "omerta"; not a sound, not a squeak has escaped into the English press, and for all the covert harassment absolutely nothing has come out into the public domain.
Have the British gone mad? I think we should be told.

So how much deeper will the persecutors-who-wont-admit-theyre-MI5 sink in their campaign of lies and intimidation? Each time I thought they could sink no lower, they have managed to surprise me. You thought it could never happen here? When the MI5 British Secret Police make their smears against me, it is the corruption of the Establishment, which they are part of, that is demonstrated.

I would, if there is a tape image archive in existence. I found a few
links to some Russian site (atari.da.ru) but it's dead. Is there a
surviving mirror of that site, or are there other tape image sites?

Also, I would like to say a belated "thank you" to all who answered.
I'll probably get or build a SIO2PC when I get around to it (not before
Christmas).

I wonder, is that special plug for the Atari SIO sockets still in
production? Or would you have to find and buy a a used disk I/O cable,
if not a whole disk drive? I don't really want to cut apart the cassette
thing. What's the name of this plug anyway?

Regards,

Have a look at ftp://ftp.pigwa.net/stuff/collections/stryker/cas
there are several cas images available (I'm currently working
on cas support for AtariSIO).

> I wonder, is that special plug for the Atari SIO sockets still in

These plugs have become very rare. You either have to butcher an IO
cable or you can also build a plug by yourself:

Get a female DB-9 connector (you only need 5 pins for SIO2PC), take
it apart and just use the pins (they fit nicely onto the male SIO
connector of the Atari).

Then solder wires to the single pins, plug them onto the SIO connector
of the Atari, put a small piece of PCB (without copper) between the
upper and lower row of the pins and glue it all together. Voila,
a homemade SIO plug :-)

You can also build the whole SIO2PC interface plus the SIO connector
on a small strip of PCB with just the width of the SIO plug and
then either solder a serial cable or a DB9 connector to the PCB
so you've all got in a small, single piece.

so long,

Hias

Here
http://www.best-electronics-ca.com/
http://www.myatari.com/
you can buy complete SIO cables.

In fact - I haven't seen any ;). That's why I wrote "homemade"
and unfortunately there is no any standard for it like
for RS-232 transmission or cable pin connections so software
like APE is problem too ;). I've made one from scratch for myself
for fun because I had couple of DB25 plugs and had no any MAX chips,
but soft is in really really alpha stage ;P altough it works
quite fine for now.

> But, I believe the APE/PRO SIO2PC serial
> and USB are the most comman/available.

I think so, too.

> And I gave a link.

Heh, cool. I just wrote that an option to SIO2PC exists, but
it's only advantage currently is simple construction for
home making and it's dangerous as always using LPT and atari
SIO ports directly. That is just my blah blah talking (writing).
For someone who wants just interface and soft for Atari-PC connection
I suggest SIO2PC+APE too - it's easier & more safe that way :).

Matthias Reichl:

> These plugs have become very rare. You either have to butcher an IO
> cable or you can also build a plug by yourself

Another solution is to destroy :) but reuse XC-12 or another media
cable and DB plugs - I prefer DB25 using 13 upper (1-13) pins of it.
Atari SIO port has 13 pins and if you want it compatible for future
(don't know which pins some future device will need) you better
connect all of them (even if not required) in this fashion:

[XC-12]---------SIOplug
          ^cut here

redo 2 cables for example that way:

[XC-12]----DB25-female-plug
(wires at apropriate pin NUMBERS as earlier in SIOplug)
DB25-male-plug-------SIOplug
(straight DB pins 1-13 (upper row) to SIO pins 1-13 connection)

This way your XC-12 is still working fine after connecting
male&female DB25's and you have an short DB25toSIOplug cable
and may stop worrying about ATARI SIO plugs accesibility
(DB25 plugs are much more popular and easier to get).
Then you can use it for many other devices/connections
(ANYTHINGtoDB25-female cable) assuming pins on the Atari
side are correctly assigned (line-in,line-out,+5V,ground etc.),
anything device requires.

Just FYI: I could have my point of origin wrong but I believe the first SIO/LPT use and schematic came with the ST Xformer software. I think I paid ~$25 or $35 for one from B&C Computer Visions. This was for hooking a real 1050 drive to your ST and Xformer would access it just like a real drive. Derek converted the software to MS DOS but I recall the timing was difficult to impossible to set unless you were in a very narrow range of PC speeds, something like a 16 mHz 386SX to 25 mHz 486.

Rick

YOOMP! will work on a NTSC Atari.
IF you use a PAL Antic and a Commodore 1902A
monitor. Modern TVs have the composite RCA
inputs, but the video rolls and there's no vertical
sync on my TV.
I also got Crownland working on the same computer
(a 256K Newell).
I can't do my cheats, like with emulator, but my
grandson wants to play it straight anyway.
Both games look and sound terrific! Thanks
Bill Kendrick for pointing to the games, and ABBUC
for sharing them.
I could do the cheats in the load file, or put the
PAL Antic in my Omnimon.
Atari is alive!

I got Omnimon to work once, then couldn't repeat that.
So, a few instructions on page six, loaded in prior to
running YOOMP!, and one small change to the .XEX,
and can set level and lives.
Alter JMP $3600 in the .XEX to JMP $600 and put the
lives on page 6 at $3634 and level at $3922, then
JMP $3600. Load program at page 6, don't execute it.

  I just bumped into a near new condition Atari 410 Cassette
Recorder!!!! If anyone is interested in it, please feel free to
respond to this message or to me via email. I would like $5.00 + S&H
for it.

 Thanks a lot!

  Charles

UPDATES SINCE PREVIOUS POSTING:
2007.12.01 Thomas Richter, atari++ 1.53
2007.12.01 trub updates, including CP/M project for Indus/LDW/CA drives
2007.12.01 MadTeam, Atari Commander 1.81
2007.11.16 deleted: Sunmark (announced going out of business)
2007.11.15 Eric Parent, Memo Pad for Windows Release 6
2007.11.15 HiassofT, MyIDE Tool V0.30
2007.11.12 added: Motelsoft
2007.11.12 Shawn Jefferson, MyIDE Image Manager 4.1
2007.11.12 added: Mario Caillahuz, developer of Plague Attack,
                   Voyage to Home, Accion, MULE Wars
2007.11.11 added: Yoomp!
2007.11.09 Mark Grebe, Atari800MacX 3.8.1 and Sio2OSX 2.0
2007.10.21 Eric Parent, Memo Pad for Windows Release 5
2007.10.07 Piotr Fusik, ASAP 1.0.1, xasm 3.0.1
2007.10.05 added: Blackened Technologies
2007.10.05 added: Atari8Warez
2007.10.05 MadTeam, MADS 1.7.8
2007.09.29 BAKTRA, DTX Manager

------------------------------

Subject: Introduction

Conventions
-----------
All commercial vendors, developers, publishers, and repair shops should be
listed here.  "Active" PD/freeware/shareware developers should also be listed.
Persons or entities holding rights to products, but not selling or supporting
them in any way, should NOT be listed here.

"Vendor" = Reseller of products produced by others.  Types of products
sold are given in categories: new hardware, used hardware, PD/freeware/
shareware, (new) commercial software, used (commercial) software.

"Developer" = Producer of products.  Titles of products produced by the
developer are listed.  No prices are given.

"Publisher" = Publishes a print or disk magazine, or a book.  Complete
subscription or ordering information should be given, including prices.
Authorized online publishers of originally print or disk magazines are also
listed.  Online books are not listed.

"Repair Shop" = Can repair 8-bit Atari or related hardware devices.  Be
sure to make advance contact before sending anything to work on!

Entries are presented alphabetically by company name, or publication
title.  If no company name exists, a personal name is used.  "See"
```

references indicate complete information may be found under the given heading. "See also" references indicate closely-related information may be found under the given heading.

The month/year that vendor information was most recently fully verified is given at the "upper-right" of each entry.

Every entry must contain a valid postal address or web page address.

Unless explicitly requested by the vendor, no entries will include an email address due to the overwhelming amount of spam that would result.

The following is from http://www.upu.int/irc/en/ (2004.03.27)

When one writes to a stranger and requests a reply, it is considered polite to enclose a self-addressed stamped envelope. This works well when both persons live in the same country. However, if they are from different countries, the enclosed postage stamp will not be valid.

This technical problem was solved in 1906 when the Universal Postal Union, during its Congress in Rome, introduced the International Reply Coupon service. International Reply Coupons (IRC) are exchangeable in all member countries for the minimum postage of a priority item or an unregistered airmail letter sent to a foreign country.

The UPU's International Bureau processes approximately six million coupons each year and takes care of all accounting aspects. Developed countries are the largest users. The International Bureau does not sell ICRs directly to customers; they must buy them from their local post office. Although they are not obliged to sell ICRs, it is mandatory for all Posts of the UPU member countries to exchange the coupons.

Verfications -> YOU!

This list is in a constant state of development, and comes with no guarantees. Information of this nature constantly ages; therefore, the information contained in this list is constantly updated. Please use the latest release of this list whenever possible!

Remember, the success of this list is dependent on YOU, the reader, to send me updates that correct errors that you find. If you use this list, please do your part in keeping it useful for everyone!
